Tables, Figures, & Exhibits	vii
Foreword	xiii
Acknowledgments	xv
About the Author	xvii
Introduction	xix
1 Introduction to Quantitative Decision-Making Methods in Health Care Management	1
Historical Background and the Development of Decision Techniques	2
The Health Care Manager and Decision Making	3
Information Technology (IT) and Health Care Management	3
The Scope of Health Care Services, and Recent Trends	4
Health Care Services Management	6
Distinctive Characteristics of Health Care Services	7
Summary	9
Patient Participation	•
Simultaneous Production and Consumption	•
Perishable Capacity	•
The Intangible Nature of Health Care Outputs	•
The High Levels of Judgment Called upon, and the Heterogeneous Nature of Health Care	

- 2 Forecasting 10
 - Steps in the Forecasting Process 11
 - Forecasting Approaches 12
 - Summary 44
 - Identify the Goal of the Forecast • Establish a Time Horizon • Select a Forecasting Technique • Conduct the Forecast • Monitor Accuracy • Judgmental Forecasts • Time-Series Approach • Techniques for Averaging • Techniques for Trend • Techniques for Seasonality • Employing Seasonal Indices in Forecasts • Accuracy of Forecasts • Forecast Control
- 3 Decision Making in Health Care Facilities 49
 - The Decision Process 49
 - The Decision Tree Approach 64
 - Decision Analysis with Nonmonetary Values and Multiple Attributes 68
 - Summary 70
 - What Causes Poor Decisions? • The Decision Level and Decision Milieu • Decision Making Under Uncertainty • Payoff Table • Maximin Case • Maximax Case • Hurwitz Case • Minimax Regret Case • Laplace Case • Decision Making Under Risk • Expected Value Model • Expected Opportunity Loss • Expected Value of Perfect Information (EVPI) • What If Payoffs Are Costs? • Analysis of the Decision Tree: Rollback Procedure • Software Illustration of Payoff and Decision Tree Methods
- 4 Facility Location 79
 - Location Methods 81
 - Summary 96
 - Cost-Profit-Volume (CPV) Analysis • Factor Rating Methods • Multi-Attribute Methods • Center-of-Gravity Method • Software Solution Using WinQSB • Geographic Information Systems (GIS) in Health Care
- 5 Facility Layout 102
 - Product Layout 103
 - Process Layout 104
 - Summary 114
 - Process Layout Tools • Method of Minimizing Distances and Costs • Computer-Based Layout Programs • Fixed-Position Layout
- 6 Reengineering 121
 - Work Design in Health Care Organizations 123
 - Summary 147
 - Work Design • Work Measurement Using Time Standards • Work Measurement Using Work Sampling • Work Simplification • Worker Compensation

7 Staffing 152

Workload Management Overview 153

Summary 173

Establishment of Workload Standards and Their Influence on Staffing Levels • Patient Acuity Systems • The Development of Internal Workload Standards • External Work Standards and Their Adjustments • Productivity and Workload Management

8 Scheduling 177

Staff Scheduling 177

Summary 193

Surgical Suite Resource Scheduling • Surgical Suite Scheduling Methods • Assessment of Scheduling Alternatives • Estimation of Procedure Times

9 Productivity 195

Trends in Health Care Productivity: Consequences of PPS 196

Summary 222

Productivity Definitions and Measurements • Commonly Used Productivity Ratios • Adjustments for Inputs • Adjustments for Output Measures • Case Mix Adjustments • Productivity Measures Using Direct Care Hours • The Relationships Between Productivity and Quality in Hospital Settings • Summary of Productivity-Related Dilemmas in the Hospital Setting • Dealing with the Multiple Dimensions of Productivity: New Methods of Measurement • Data Envelopment Analysis • Overview on Improving Health Care Productivity

10 Resource Allocation 227

Linear Programming 227

Summary 240

Maximization Models • Minimization Models • Integer Linear Programming

11 Supply Chain and Inventory Management 244

Health Care Supply Chain 244

Summary 267

Flow of Materials • Supply Chain Management Issues for Providers • Contemporary Issues in Medical Inventory Management • Traditional Inventory Management • Requirements for Effective Inventory Management • Inventory Accounting Systems • Lead Time • Cost Information • Classification System • Economic Order Quantity Model • Software Solution • When to Reorder

12 Quality Control 272

Quality in Health Care 272

Quality Measurement and Control Techniques 279

Summary 302

Quality Experts • Quality Certifications and Awards • Total Quality Management (TQM) and Continuous Quality Improvement (CQI) • Six Sigma • Process Variability • Monitoring Variation Through Control Charts • Control Charts for Attributes • Control Charts for Variables • Investigation of Control Chart Patterns • Process Improvement • Methods for Generating New Ideas • Tools for Investigating the Presence of Quality Problems and Their Causes

13 Project Management 308

The Characteristics of Projects 309

Summary 335

The Project Manager • Managing Teams and Relationships on Projects • Planning and Scheduling Projects • The Gantt Chart • PERT and CPM • The Network • Critical Path Method (CPM) • Probabilistic Approach • The Case of a Dominant Critical Path • Project Compression: Trade-Offs Between Reduced Project Time and Cost

14 Queuing Models and Capacity Planning 345

Summary 364

Queuing System Characteristics • Measures of Queuing System Performance • Typical Infinite-Source Models • Model Formulations

15 Simulation 373

Simulation Process 373

Performance Measures and Managerial Decisions 384

Summary 386

Monte Carlo Simulation Method

Appendices

Appendix A Standard Normal Distribution $P(0 < z < x)$ 389

Appendix B Standard Normal Distribution $P(-3.5 < z < 3.5)$ 391

Appendix C Cumulative Poisson Probabilities 393

Appendix D t -distribution 397

References 399

Index 405

TABLES, FIGURES, & EXHIBITS

Tables

- 1.1. Total Expenditures on Health as %GDP for 30 OECD Countries 4
- 1.2. Distribution of Health Providers and Health Workers in Health Services in 2002, and Expected Growth 5
- 1.3. Health Services by Occupation in 2002, and Projected Growth 6
- 2.1. HEAL-ME Hospital Average Daily Patient Days 35
- 2.2. Quarterly Indices for HEAL-ME Hospital 36
- 2.3. Monthly Indices for HEAL-ME Hospital 36
- 2.4. Daily Indices for HEAL-ME Hospital 37
- 2.5. Monthly and Daily Adjusted Forecasts for HEAL-ME Hospital 39
- 2.6. Error Calculations 40
- 3.1. Payoff Table 53
- 3.2. Demand for Additional MRIs 54
- 3.3. Maximin Solution 54
- 3.4. Maximax Solution 55
- 3.5. Sensitivity Analysis Using Hurwitz Optimism Parameters 56
- 3.6. Opportunity Losses (Regrets) 57
- 3.7. Laplace Strategy 58
- 3.8. Payoff Table for EVM 60

- 3.9. Expected Opportunity Loss 61
- 3.10. Best Outcomes Under Certainty 62
- 3.11. Total Cost of Alternatives Under Various Demand Conditions 63
- 3.12. Regret Table Using Costs 64
- 3.13. Summary of Supplier Proposals 68
 - 4.1. Factors to be Considered in Establishing a Satellite Clinic 85
 - 4.2. Relative Scores on Factors for a Satellite Clinic 86
 - 4.3. Relative Factor Scores and Weights 87
 - 4.4. Composite Scores 88
 - 4.5. Satellite Clinic Factor Rankings and Minimum Acceptable Levels 89
 - 4.6. Satellite Clinic Factor Minimum Acceptable Levels 90
 - 4.7. Satellite Clinic Factor Importance Rankings 91
 - 4.8. Selected Richmond Metropolitan Area Hospitals 92
 - 4.9. Selected Richmond Metropolitan Area Hospitals and Their Interaction with the Blood Bank 93
- 5.1. Distance and Flows Among Three Hospital Departments 110
- 5.2. Possible Assignment Configurations of Departments to Three Locations 110
- 5.3. Ranking Departments According to Highest Flow 111
- 5.4. Total Cost of a Layout 111
- 6.1. Typical Allowance Percentages for Varying Health Care Delivery Working Conditions 131
- 6.2. Observed Times and Performance Ratings for Nursing Unit Activities 132
- 6.3. Observed and Normal Time Calculations for Nursing Unit Activities 133
- 6.4. Abridged Patient Care Tasks in a Nursing Unit 135
- 6.5. Work Sampling Data Collection Form for Nursing Unit 136
- 6.6. Random Numbers 139
- 6.7. Development of the Schedule for a Work Sampling Study 141
- 6.8. Final Work Sampling Schedule 142
- 6.9. Partial Work Distribution Chart for Nursing Unit 143
- 7.1. Examples of Work Standards 155
- 7.2. Daily Census, Required Labor Hours, and Acuity Level Statistics for a Medical/Surgical Floor 159
- 7.3. Average Census, Required Labor Hours, and Acuity Level Statistics for a Medical/Surgical Floor 160
- 7.4. Weighted Average Utilization for a Laboratory Based on Workload Fluctuations by Shift 164
- 7.5. Workload Standards for Microscopic Procedures in Laboratory 164

7.6.	Calculation of Staffing Requirements for Microscopic Procedures	165
7.7.	The Effect of Shift Alternatives on Staffing—The Coverage Factor	168
10.1.	Nurse Scheduling with Integer Programming	238
11.1.	A-B-C Classification Analysis	257
12.1.	Factors for Determining Control Limits for Mean and Range Charts (for Three-Sigma or 99.7 Percent Confidence Level)	290
13.1.	Activity Precedence Relationships	313
13.2.	Path Lengths for the Radiation Oncology Project	317
13.3.	Probabilistic Time Estimates for Radiation Oncology Clinic	323
13.4.	Calculation of Expected Time and Standard Deviations on Each Path for the Radiation Oncology Clinic	324
13.5.	Path Completion Probabilities	325
13.6.	Project Completion Probabilities	328
14.1.	Summary Analysis for M/M/s Queue for Diabetes Information Booth	363
15.1.	Simple Simulation Experiment for Public Clinic	374
15.2.	Summary Statistics for Public Clinic Experiment	375
15.3.	Patient Arrival Frequencies	377
15.4.	Probability Distribution for Patient Arrivals	377
15.5.	Cumulative Poisson Probabilities for $\lambda = 1.7$	378
15.6.	Cumulative Poisson Probabilities for Arrivals: $\lambda = 2.0$	380
15.7.	Monte Carlo Simulation Experiment for Public Health Clinic	381
15.8.	Summary Statistics for Public Clinic Monte Carlo Simulation Experiment	382

Figures

2.1.	Variation Characteristics	14
2.2.	WinQSB Setup: Moving Average (MA_3) for OB/GYN Clinic	17
2.3.	WinQSB Solution: Moving Average (MA_3) for OB/GYN Clinic	18
2.4.	WinQSB Graphical Solution: Moving Average (MA_3) for OB/GYN Clinic	19
2.5.	Pediatric Visits Forecast Using MA_3 and MA_5	20
2.6.	WinQSB Setup for OB/GYN Example using WMA_3	21
2.7.	WinQSB Solution to OB/GYN Example with WMA_3	22
2.8.	WinQSB Solutions to the OB/GYN Example, Using Single Exponential Smoothing (SES)	25
2.9.	Linear Regression	26
2.10.	WinQSB Solution to the Multihospital System Example	28

- 2.11. Linear Regression as a Trend 29
- 2.12. WinQSB Linear Trend Solution to the OB/GYN Example 30
- 2.13. WinQSB Linear Trend Graphic Solution to the OB/GYN Example 31
- 2.14. Forecast of Physician Office Receipts with SEST 34
- 2.15. Seasonality-Removed Trend Data for HEAL-ME Hospital Patient Demand 38
- 2.16. Alternative Forecasting Methods and Accuracy, Measured by MAD & MAPE 41
- 2.17. Tracking Signal for Patient Visit Forecast, HEAL-ME Hospital 42
- 2.18. Tracking Signal for Patient Visit Forecasts 43
 - 3.1. Decision Tree 65
 - 3.2. Rollback Method 66
 - 3.3. WinQSB Payoff Table Setup for the Example Problem 66
 - 3.4. WinQSB Results of Payoff Analysis 67
 - 3.5. WinQSB Decision Tree and Rollback Method 67
- 4.1. Total Cost of Alternative Imaging Sites 83
- 4.2. Profit Evaluation of Alternative Sites 84
- 4.3. Richmond Metropolitan Area Hospitals 92
- 4.4. Richmond Metropolitan Area Blood Bank Locations 94
- 4.5. WinQSB Setup and Solution to Blood Bank Problem 95
- 4.6. WinQSB Graphical Solution to Blood Bank Problem 96
- 4.7. Geographic Information Systems 97
- 5.1. Available Space for Layout of Long-Term Care Facility 106
- 5.2. Closeness Rating Chart for Long-Term Care Facility 106
- 5.3. A and X Closeness Representation 107
- 5.4. Layout Solution 108
- 5.5. WinQSB Solution to a Small Hospital Layout Problem 113
- 5.6. WinQSB Iterations and Final Layout for a Small Hospital 114
- 6.1. Work Design—A Systems Perspective 124
- 6.2. Socio-Technical School Approach 127
- 6.3. Flow Process Chart for Emergency Room Specimen Processing 145
- 6.4. Commonly Used Flow Chart Symbols 145
- 6.5. Flow Chart for Emergency Room Specimen Processing 146
- 7.1. Workload Management 153
- 7.2. Distribution of Daily Workload on a Nursing Unit 169
- 7.3. Workload Standard Tolerance Ranges 171
- 8.1. Comparison of Eight- and Ten-Hour Shifts 179
- 8.2. Pattern of Alternating Eight- and Twelve-Hour Shifts 180
- 9.1. Productivity and Quality Trade-Off 213

- 9.2. Substitution of Physicians and Nurse Practitioners: A Look at Technical Efficiency 216
- 9.3. Example of DEA Efficiency Frontier Formulation 219
- 10.1. Graphic Solution for Insurance Company Problem 232
- 10.2. WinQSB Data Entry and Solution to the Insurance Problem 233
- 10.3. Graphic Solution for Minimization Example 236
- 10.4. Sensitivity Analysis 237
- 10.5. Staff Scheduling with Integer Linear Programming 239
- 11.1. Health Care Supply Chain 245
- 11.2. The Inventory Order Cycle for Basic EOQ Model 258
- 11.3. The Economic Ordering Quantity Model 259
- 11.4. Setup for Syringe Inventory 264
- 11.5. Solution to Syringe Inventory 264
- 11.6. Cost Curves for Syringe Inventory 265
- 12.1. Quality Measurement 273
- 12.2. The Deming Wheel/Shewhart Cycle 277
- 12.3. Process Capability 280
- 12.4. Control Limits, Random and Nonrandom Sample Observations 282
- 12.5. ABC Medical Center Infection Control Monitoring 285
- 12.6. Holistic Care Corporation's Quality Monitoring 287
- 12.7. Use of Mean and Range Charts 288
- 12.8. Identification of Runs 292
- 12.9. Zone Test 295
- 12.10. A Check Sheet and Corresponding Histogram for Emergency Room Wait Times 299
- 12.11. Scatter Diagram 300
- 12.12. A Flow Chart for the X-Ray Order Process in an Emergency Department 301
- 12.13. Cause-and-Effect Diagram 301
- 12.14. Pareto Diagram 302
- 13.1. Network Representations 315
- 13.2. Aon Network Diagram for Radiation Oncology 316
- 13.3. Activity Start and Finish Times 318
- 13.4. WinQSB Solution to the Radiation Oncology Project, CPM Version 319
- 13.5. WinQSB Network Diagram for the Radiation Oncology Project 320
- 13.6. Project Completion Probabilities by the Specified Time 325
- 13.7. Completion Probabilities for Sixty-Five Weeks 326
- 13.8. WinQSB Solution to the Probabilistic Radiation Oncology Project 327
- 13.9. WinQSB Probability Analysis for Completion Time 328

- 13.10. Project Duration and Compression (Crashing) Costs 330
- 13.11. Project Compression 331
- 13.12. Total Cost of Compression 335
- 14.1. Queue Phenomenon 346
- 14.2. Health Care Service Capacity and Costs 347
- 14.3. Queuing Conceptualization of Flu Inoculations 348
- 14.4. Conceptualization of a Single-Line, Multiphase System 349
- 14.5. Multiple-Line Queuing System 350
- 14.6. Emergency Room Arrival Patterns 351
- 14.7. Measures of Arrival Patterns 352
- 14.8. Poisson Distribution 353
- 14.9. Service Time for ER Patients 353
- 14.10. WinQSB Setup and Solution for Diabetes Information Booth Problem 359
- 14.11. WinQSB System Probability Summary for Diabetes Information Booth 360
- 14.12. WinQSB System Performance for Expanded Diabetes Information Booth 361
- 14.13. WinQSB System Performance Summary for Expanded Diabetes Information Booth with M/M/3 362
- 14.14. WinQSB Capacity Analysis 363
- 15.1. Random Numbers 379
- 15.2. Excel-Based Simulated Arrivals 383
- 15.3. Excel Program for Simulated Arrivals 384
- 15.4. Performance-Measure-Based Managerial Decision Making 385

Exhibits

- 5.1. From-To Chart for a Small Hospital 109
- 8.1. Cyclical Staffing Schedules for Four and Five Weeks 183
- 8.2. An example of or Block Schedule 190
- 13.1. Gantt Chart for Launching a New Radiation Oncology Service 312
- 14.1. Queuing Model Classification 354
- 14.2. Queuing Model Notation 356
