

INDEX

- Actor-centered adaptive decision making (ACADM), 55–56
- Adult educators: brain research and, 3, 8, 11; as caring mentors, 14–15, 82; hemispheric balance and, 15; holding environment and, 83; as suppliers of new experiences, 8; traumatized learners and, 25. *See also* Mentors
- Adult learners: negative assumptions of, 14–15; learning traumas of, 14, 16, 25; self-esteem of, 16; survival responses of, 24–25. *See also* Narratives, learner; Traumatized learners
- Adult learning: anger and, 14–15; cognitive neuroscience and, 3, 8, 11; concept mapping and, 49; fear and, 14, 25; over lifespan, 11; new experiences and, 8, 37; peer-learning strategy in, 17; response to threat and, 24; social-emotional environment and, 13; storytelling and, 17; stress and, 13–14. *See also* Adult educators; Adult learning, practice implications for; Learning Adult learning, practice implications for: advanced organizers and, 75; autobiographies and, 76–77; Big Picture approach and, 74; critical incident activity and, 76; experience-based strategies and, 74–75; frontal approach and, 74; journals and, 76; meaning construction and, 73; meaningful learning and, 72; narratives and, 74–76; nonveridical learning and, 78; timelines and, 74; writing-to-learn and, 77–78. *See also* Instructional strategies, for meaningful learning
- Affective attunement, 66
- Analogy, learning and, 38
- Anger, and learning, 14
- Arousal: learning and, 12–14; memory and, 39; stress response and, 13–14, 23, 39
- Arousal continuum, 23–24
- Associations, neocortex and, 4, 6
- Attention, and learning: definition of, 36; emotion and, 39–40; habituation and, 37; meaning and, 36–39; novel events and, 37; psychophysiology of, 36–37
- Autobiographies: prior learning assessment and, 77; self-awareness and, 76. *See also* Journals
- Avoidance, 24
- Baseline, of fear state, 25
- Bell, S., “Experience, Consciousness, and Learning: Implications for Instruction,” 43–51
- Biological reductionism, 30
- Biopsychosocial model, of mental illness, 30
- Brain: amygdala, 39; bauplan of, 3–4; change-of-body-state (COBS) experience and, 43–44; cortex, 3; as dynamic, 36; fired-together-wired-together (FTWT) networks in, 36, 43–49; hippocampus and, 31; limbic system, 15, 66; mind and, 30–31; neocortex, 3–4; orbitofrontal cortex and, 15, 79; as pattern-making organ, 37; response to threat and, 22–24; signaling and, 3; as social organ, 13, 15. *See also* Brain, change in; Executive functions, of brain; Neocortex
- Brain, changes in: affective attunement and, 66; challenges and, 84; emotion-induced, 39; fear-induced, 24–25; and learning, 4–5, 7, 11, 22; mental illness and, 30; by mind, 30; narratives and, 75; neural plasticity, 11–112, 14; psychological trauma and, 30; reflection and, 32; safe space and, 67; social interaction and, 65; stress-induced, 22; transformational learning and, 79; in traumatized learners, 22–24; trauma-induced, 22; trust and, 64–65. *See also* Brain self-repair
- Brain development: brain plasticity and, 32; education and, 31–32; genes and, 32; learning and, 32; psychological trauma and, 32; reflection and, 32; research on, 33; safe space and, 67
- “Brain Function and Adult Learning: Implications for Practice,” 71–85
- Brain plasticity. *See* Neural plasticity
- Brain self-repair: education and, 31–32; hippocampus and, 31; mind and, 30;

- psychological trauma and, 29–30; psychotherapy and, 29; reflection and, 30
- “Brain Self-Repair in Psychotherapy: Implications for Education,” 29–33
- Caine, G., “Meaningful Learning and the Executive Functions of the Brain,” 53–61
- Caine, R. N., “Meaningful Learning and the Executive Functions of the Brain,” 53–61
- Caring, and learning: adult educators and, 14–15, 27, 82–83; creating environment for, 58–59; holding environment and, 82–83; importance of, 12, 15; mentors and, 15, 82. *See also* Safety, and learning; Mentors
- Cartesian dualism, 30
- Change-of-body-state (COBS) experience, 43–50
- Chemical-delivery neurons, 4
- Child development, learning trauma and, 14–15, 24
- Cognitive coaching, 54
- Cognitive neuroscience, growth of, 3
- Concept mapping, 49
- Concrete experience, 38, 74. *See also* Experience
- Consciousness: blind, 47; change-of-body-state (COBS) experience and, 43–50; conceptual models and, 48; experience and, 43–44; extension into future of, 45–46; fired-together-wired-together (FTWT) networks in, 36, 43–49; multidimensional storyline and, 44–46. *See also* Instructional strategies, and consciousness; Mind
- Constructing meaning. *See* Meaning making
- Constructivism, 38, 53–54, 72
- Constructivist learning. *See* Meaningful learning
- Cozolino, L., “Neuroscience and Adult Learning,” 11–19
- Creating, and learning, 6–7
- Curiosity, and learning: fear response and, 27; new experiences and, 26
- Data gathering, and learning, 5
- Decision making: constructivist learning and, 55; executive functions and, 57; meaningful learning and, 55; survival response and, 58; veridical and non-veridical, 55, 78. *See also* Actor-centered adaptive decision making (ACADM)
- Developmental journey, of learner: abstract thinking, 68; dialectical reflection and, 66; dialogue and, 65; fear and, 66; knowledge creation and, 68; mentor relationship and, 64, 66; scaffolding and, 68; transitions in, 64; trust and, 64–65; zone of proximal development and, 68
- Dissociation, 24–25
- Education: brain plasticity and, 32; brain self-repair and, 31–32; psychotherapy and, 31. *See also* Instructional strategies (*by topic*)
- Emotion: brain changes and, 39; learning and, 7, 14–15; limbic system and, 15; memory and, 81; stress response and, 39; teaching as care and, 81–83; transformative learning and, 82
- Emotion, and learning: drawbacks to, 40; emotional hook and, 39–40; rationality and, 39–40; real-life problems and, 39–40
- Executive functions, of brain: decision making and, 57; high-road/low-road analogy and, 57; sabotage to, 57; survival mode and, 57–58
- Experience: change-of-body-state (COBS) experience and, 43–44, 46; consciousness and, 43–44; decision making and, 55; definitions of, 54–55; meaning making and, 54
- Experience, and learning: decision making and, 55; FTWT networks and, 50; instructional guidance and, 54–55, 73; instructional strategy for, 46–47; meaning and, 38; perceptual shift and, 54; research on, 50
- “Experience, Consciousness, and Learning: Implications for Instruction,” 43–51
- Experiential learning: creating meaning through, 39; job performance and, 50; practice implications and, 72–75. *See also* Actor-centered adaptive decision making (ACADM); Concrete experience, and learning; Experience, and learning
- Fear, and learning: alarm state and,

- 24–25; baseline state and, 25; classroom experiences and, 14–15; curiosity and, 26–27; information retrieval and, 26; long-term impact and, 25–26
- “Fear and Learning: Trauma-Related Factors in the Adult Education Process,” 21–28
- Fight-or-flight response, 22–24, 39. *See also* Stress response
- Fired-together-wired-together (FTWT) networks, 36, 43–49
- Habituation, 37
- Holding environment, 82–83. *See also* Safety, and learning
- Hypothetical-deductive problem solving, 80
- Information retrieval, fear and, 26
- Instructional strategies, and consciousness: concept mapping and, 49; conceptual models and, 48; linking to new ideas as, 48; real-life experiences and, 49–50, 74; reflection and, 47; strategy 1: begin with baseline of prior experience, 46–47; strategy 2: extend learners’ consciousness, 47–49; strategy 3: enrich consciousness, 49–50; tacit knowledge and, 49–50
- Instructional strategies, for meaningful learning: actor-centered adaptive decision making, 55–56; cognitive coaching, 54; concept mapping, 49; creating safe environment and, 58–59; listening, 58–59; nourishing purpose/passion and, 59; orchestrating experiences for, 59; ordered sharing, 59; recognizing survival mode and, 59–60; scaffolding, 60; situated cognition, 54
- Johnson, S., “The Neuroscience of the Mentor-Learner Relationship,” 63–69
- Journals, 76. *See also* Autobiographies
- “Key Aspects of How the Brain Learns,” 3–9
- Knowledge creation, learner development and, 68
- Kolb’s learning cycle, 5
- Learner transitions, 64. *See* Developmental journey, of learner
- Learners. *See* Developmental journey, of learner; Narratives, learner
- Learning: activation of affective-cognitive processes and, 13; arousal and 12–14, 26; aspects of, 53; brain changes and, 4–5, 7, 11; brain development and, 32; as change, 4; constructivist view of, 7; decision making and, 55; four pillars of, 5–7, 73; Kolb’s learning cycle and, 5, 73; making of meaning and, 53–55; neural basis of, 33–37; neural plasticity and, 11–12; neurobiological factors in, 4–5, 7, 14; neurophysiology of, 1, 3, 8, 11, 13; NSF-funded research on, 33; plasticity and, 13; principles for enhancing, 12; problem solving and, 38; project-based, 38–39; psychosociological theories and, 1; self-reflection and, 13; top-down convergence and, 15; veridical vs. nonveridical, 78; window for, 7–8. *See also* Adult learning; Experiential learning; Instructional strategies (*by specific topic*); Meaningful learning; Narratives, learner; *and by specific topic*; Transformational learning
- Learning theory: behavioral measures, 35; cognitive structuring/restructuring, 35; constructivism, 38, 53–54
- Limbic system, 15
- Long-term memory, 81
- Meaning, and learning: attention and, 36–39; concrete experience and, 38, 74; embodied meaning and, 54; metaphor/analogy/simile and, 38; misconceptions and, 37; prior knowledge and, 38; problem-solving and, 38–39; projects and, 39; retention and, 36; visualization and, 37. *See also* Meaning making
- Meaning making: actor-centered adaptive decision making (ACADM) and, 55–56; cognitive coaching and, 54; constructivism and, 53–54; embodied meaning and, 54; experience and, 54–55; individual nature of, 54; learning and, 53; perception and, 54; situated cognition and, 54; sociocultural context and, 73
- Meaningful learning: constructivism and, 53–55; creating environment for, 58–59; definition of, 53; practice

- implications and, 72. *See also* Learning; Meaning making
- “Meaningful Learning and the Executive Functions of the Brain,” 53–61
- Memory, and learning: arousal and, 39; emotion and, 81; novel events and, 37; process of, 36; retention and, 36; stress response and, 39; veridical learning and, 78
- Mental illness: biopsychosocial model of, 30; brain changes and, 30; psychotherapy and, 30; trauma model of, 30–31. *See also* Psychological trauma
- Mentor-learner relationship: dialogue and, 65; knowledge creation and, 68; learner fears and, 66; power differentials in, 83; reflection and, 66; supportive space in, 66–67; trust and, 64; zone of proximal development and, 68. *See also* Mentors; Developmental journey, of learner
- Mentors: adult educators as, 14–15, 82; as caring, 15; developmental journey of learner and, 63–64, 66; facilitator role of, 63; as mirrors for learner, 67–68; safe environment and, 66–67; trust development and, 64. *See also* Mentor-learner relationship
- Metaphor, learning and, 38
- Mind: brain as cause of, 31; changes in brain by, 30. *See also* Brain; Consciousness
- Misconceptions, and learning, 37
- Narratives, learner: adult educators and, 16; brain changes and, 75; brain development and, 32; coconstruction of, 76; journals and, 76; negative, 16–17; positive, 12–13; self-esteem and, 16; storytelling and, 16–17, 75. *See also* Autobiographies; Journals; Narratives, learner; Writing-to-learn
- National Science Foundation (NSF), 33
- Neocortex: associative region of, 4; back-integrative region of, 3–4, 6; emotions and, 4, 7; front-integrative region of, 3–4, 6; motor region of, 3–4; sensory region of, 3–4; signal modifying neurons and, 4. *See also* Brain
- Neural plasticity: in adults, 32; arousal and, 14; in children, 32; defined, 11; education and, 32; learning and, 12–13; psychotherapy and, 12; social interaction and, 12, 17; studies on, 12; trauma and, 32. *See also* Plasticity, of learning
- “Neuroscience and Adult Learning,” 11–19
- Neurons: defined, 35; learning and, 36; signal modifying, 4
- “Neuroscience of the Mentor-Learner Relationship, The,” 63–69
- New experiences, and learning: adult educators and, 8; curiosity and, 26–27
- Nonveridical learning, 78
- Novel events, and learning, 37. *See also* New experiences, and learning
- Peer-learning strategy, 17
