Preface	ix
Introduction	1
1 Linear components for supramolecular networks	9
1.1 Flexible components	9
1.2 Rigid components from Schiff bases	17
1.3 Flexible tripods	19
1.4 Simple anion hosts	23
1.5 Rigid platforms	30
2 Cyclic synthons	35
2.1 Planar macrocycles from nature	35
2.2 Artificial planar macrocycles – phthalocyanines and other cyclic systems	37
2.3 Serendipitous macrocycles	43
2.4 Adding functionality to the crowns	46
2.5 Azacrowns with sidearms	51
2.6 Water-soluble macrocycles	55
2.7 Catenanes and rotaxanes	60
3 Molecular baskets, chalices and cages	69
3.1 One for beginners	69
3.2 Calixarenes – essential supramolecular synthons	71
3.3 Adding lower rim functionality to the calixarenes	77
3.4 Adding upper rim functionality to the calixarenes	80
3.5 Oxacalix[3]arenes	84
3.6 Oxacalixarene derivatives	91
3.7 Azacalix[3]arenes	99
3.8 Calixarene variations	102
3.9 Molecular cages for cations and anions	107
4 Supramolecular assembly	115
4.1 Detection, measurement, prediction and visualization	115
4.2 X-ray crystallography	115
4.3 Spectroscopic and spectrometric techniques	120
4.4 Binding constant determination	122
4.5 Solid state vs. solution behaviour	127

4.6	Supramolecular chemistry <i>in silico</i> : molecular modelling and associated techniques	127
4.7	Computational approaches	129
4.8	A protocol for supramolecular computational chemistry	141
4.9	Examples of <i>in silico</i> supramolecular chemistry	142
5	Supramolecular phenomena	161
5.1	Clathrates	161
5.2	Stabilization of cation–anion pairs by crown ethers: liquid clathrates	162
5.3	Receptors for the ammonium ion	168
5.4	Purification of fullerenes	170
5.5	Making molecular boxes and capsules	172
5.6	Self-complementary species and self-replication	176
Appendix 1	Integrated undergraduate projects	185
Appendix 2	Reagents and solvents	189
Index		197
