<i>Introduction</i>	<i>xxiii</i>
Chapter 1 • Inventor Design Philosophy	1
Moving from the AutoCAD Environment	1
Using the Inventor Graphical Interface	3
Tool and Browser Panels	5
Pulldown Menus	7
The Model Browser	8
Learning the File Types in Inventor	10
Using DWG Files in Inventor	11
Creating DWG Files from Inventor Drawings	12
Moving from AutoCAD to Inventor	12
Building a 3D Virtual Prototype	13
What Is a Virtual Prototype?	14
Understanding Parametric Design	15
Understanding Functional Design	16
Understanding Solids vs. Surface Modeling	18
Best Practices in Autodesk Inventor	20
Creating a Data Management Structure	21
Selecting the Proper Project File Type for Your Designs	21
Developing an Efficient and Stable Part-Modeling Workflow	22
Developing Assembly Structure for Maximum Efficiency	22
Establishing Standards for Documentation	23
Digital Communication	24
The Bottom Line	24
Chapter 2 • Data and Projects	27
Creating a Data Structure	27
Setting Up the Ideal Directory Structure	27
Preparing Parts for Reuse and Revision	32
Exploring Project File Types	33
Creating the Project File	34
Creating a Single-User Project	36
Working in Collaborative Environments	43
Creating a Multiuser Project	44
The Bottom Line	47
Chapter 3 • Sketch Techniques	49
Application Options and Settings for Parts and Sketches	49
Creating a New Part File from a Template	53

Preserving Design Intent	55
Creating a Basic 2D Sketch	56
Exploring the 2D Sketch Commands	57
Using Sketch Object Modifiers	59
Setting Sketch Constraints and Dimensions	60
Adding Dimensions to Sketches	64
Anchoring the Sketch	66
Using Construction Geometry	71
Creating Sketches from Auto CAD Geometry	75
Creating and Using 3D Sketches	78
Creating a 3D Spline	78
Using the 3D Coordinate Triad and Precise Redefine Functions	79
The Bottom Line	84
Chapter 4 • Basic Modeling Techniques	87
Exploring Application Options and Settings for Part Modeling	87
Specifying Global Settings	87
Specifying Document-Specific Settings	88
Creating Basic Part Features	93
Simplifying Your Sketches	94
Creating a Part Using the Same Workflow	95
Creating the Second Feature	98
Creating a Placed Chamfer Feature	99
Creating a Sketch-Based Hole Feature	100
Mirroring Features	102
Creating a Placed Hole Feature	103
Creating a Rectangular Hole Pattern	104
Creating a Second Extruded Cut and Associated Lip	106
Modifying Existing Part Features	109
Creating and Using Work Features	111
Work Plane Tangent to Cylinder	112
Sketching on a Work Plane	114
Creating Text in a Sketch	114
Embossing Text	116
The Bottom Line	117
Chapter 5 • Advanced Modeling Techniques	119
Complex Sweeps and Lofts	119
Creating and Using Sweeps	119
Sweep Type Options	121
Loft Features	124
Turned Parts and Threads	128
Revolved Cylindrical Parts	129
Extruded Cylindrical Parts	130
Creating Threaded Features	130
Cast and Plastic Parts	132

Derived Part Creation	132
Part Tolerances	134
Setting Global File Tolerances	135
Overriding Current Tolerances	136
Parameters and iProperties	136
Part Parameters	137
Assembly Parameters	139
Part Analysis	139
Construction Environment	140
Working with Base Solids	144
Activating the Solids-Editing Environment	145
Troubleshooting Failures	146
The Bottom Line	147
Chapter 6 • Sheet Metal	149
Getting to Know the Features	149
Starting with a Base	149
Creating Flanges	150
Adding, Removing, or Deforming Material	152
Using Sheet Metal Templates and Rules	155
What Are Sheet Metal Rules?	156
Unfolding Your Part	158
Working with Styles and Templates	161
Authoring and Reusing Punches	161
Punches and iFeatures	161
Creating Successful Punches	162
Alternate Representations	163
Placing Your Punch	163
Leveraging the Flat Pattern	165
Flat Pattern Edit Features	165
What's Stored Inside?	166
Manufacturing Your Flat Pattern	167
Sheet Metal iPart Factories	167
Consuming Sheet Metal Rules	167
Folded and Flat Members	168
Modeling with Non-Sheet-Metal Features	169
Selecting Problematic Features	169
Surface-Based Workflows	170
Working with Imported Parts	170
Setting Yourself Up for Success	170
Annotating Your Sheet Metal Design	171
Creating a View of Your Sheet Metal Design	171
Bend, Punch, and Flat Pattern Annotations	172
Harvesting Legacy Sheet Metal Templates	175
Parameter Indirection	176
The Hidden Tools of Harvesting	176

Style Library Manager	178
The Bottom Line	178
Chapter 7 • Part and Feature Reuse	181
Working with iParts	181
Creating and Modifying iParts	182
Using iParts in Designs	187
Working with iFeatures	188
Creating iFeatures	188
Creating Punch Features	190
Reusing Existing Geometry	193
Copying Features	193
Cloning	194
Copying Sketches	195
Introducing Content Center	197
Configuring Content Center	197
Using Content Center	198
Customizing Content Center	201
The Bottom Line	205
Chapter 8 • Assembly Design Workflows	207
Understanding Subassemblies	207
The Power of Subassemblies	207
Flexibility	209
Top-Down Design	210
Developing an Efficient Assembly Workflow	210
Adaptivity	213
3D Constraints	216
How Constraints Work	216
Degrees of Freedom	217
Types of 3D Constraints	217
Motion Constraints	220
Transitional Constraints	220
Driving Constraints	221
Redundant Constraints and Constraint Failures	222
Contact Solver	223
Assembly Features	223
Managing the Bill of Materials	225
Parts-Level BOM Control	225
Assembly-Level BOM Control	225
Assembly Reuse and Configurations	232
Copying Designs	232
Representations	234
View Representations	235
Positional Representations	235
Level of Detail Representations	238

iAssemblies	239
The Bottom Line	243
Chapter 9 • Large Assembly Strategies	245
Selecting a Workstation	245
Physical Memory vs. Virtual Memory	245
64-bit Systems vs. 32-bit Systems	246
Hardware	246
Working with Performance Settings	248
Working with Drawing Settings	248
Working with Model Display Settings	250
Working with General Settings	251
Working with System Settings	253
Large Assembly Best Practices	254
Working with the Model	254
Reducing Assembly Constraints	255
Opening the Model	259
Working with Large Assembly Drawings	260
Managing Assembly Detail	262
Level Of Detail Strategies	263
Substitution Level Of Details	264
Subassembly Level of Details	265
Simplifying Parts	267
Removing or Suppressing Unneeded Features	267
Working with Colors	268
The Bottom Line	268
Chapter 10 • Weldment Design	269
Exploring Weldment Design Methodologies	270
Modeling Preparations	272
Cosmetic Welds	274
Creating Weld Beads	278
Creating Fillet Welds	278
Creating Intermittent Fillet Welds	281
Creating Groove Welds	282
Performing Machining Operations	285
Exploring Weld Properties and Combinations	286
Weld Properties	286
Replication	286
Groove and Fillet Weld Combinations	287
Split Technique	287
Using the Weld Symbol	290
Bead Property Report and Mass Properties	291
Drawing Documentation	292
Weldment Design Stages	294
End Fill	296

Drawing Weld Symbol	297
Caterpillar	297
Bill of Materials and Parts List	298
The Bottom Line	301
Chapter 11 • Functional Design	303
Geometric Modeling vs. Functional Design	304
Design Requirements	304
Design Accelerators General Introduction	305
Design Accelerators Input	305
Design Accelerators Output	306
Design Generators and Content Center	310
Prerequisites for This Chapter	310
Bolted Connections	311
Calculators	316
Weld Calculator	316
Generators	320
Gear Generator	320
Key Connections	325
Shaft Generator	328
Cam Generator	335
Spring Generator	339
The Bottom Line	343
Chapter 12 • Documentation	345
Working in the Presentation Environment	345
Creating a Basic Explosion	345
Using the Drawing Manager	348
Creating Templates and Styles	349
Creating Drawing Views and Annotations	359
The Bottom Line	388
Chapter 13 • Inventor Tools Overview	391
AEC Exchange	391
AutoLimits	392
Creating AutoLimits	394
Editing AutoLimits	394
Design Assistant	395
Using the Find Files Command	397
Using the Where Used Command	398
Renaming and Performing Other Operations on Files	399
Using Pack and Go	400
Drawing Resource Transfer Wizard	402
Style Tools	405
Using the Style Library Manager	405
Using the Style Management Wizard	406

Supplier Content Center	408
Task Scheduler	409
Creating a Task for Migrating Files	410
Performing Sequential Tasks	412
Performing Custom Tasks	413
Tweaking Multiprocess Settings	413
iProperties	414
Copying iProperties to Drawings	415
Creating Expressions with iProperties	416
Working with the DA and iProperties	417
Creating Design Property Reports	418
Measure Tool	418
Using Measurement Helpers	418
Measuring in Assemblies	419
The CIP and CER	420
Participating in the CIP	420
Participating in CER	420
Miscellaneous Tools	421
Using the Autodesk Multi-Sheet Plot	421
Using the Add-in Manager	421
Using the Project Editor	422
The Bottom Line	422
Chapter 14 • Exchanging Data with Other Systems	425
Importing and Exporting Geometry	425
DWG	426
Mechanical Desktop DWG	429
STEP and IGES	430
SAT	433
Using Inventor File Translators	434
Pro/ENGINEER	434
Unigraphics and Parasolids	435
Solidworks	436
IDF Board Files	437
Placing Components from Other CAD Systems	437
Working with Imported Data	438
Working in the Construction Environment	438
Editing Imported Data	442
Viewing DWF Markup	443
Using Feature Recognition	447
The Bottom Line	452
Chapter 15 • Frame Generator	455
Accessing the Frame Generator Panel Bar	455
Exploring the Frame Generator File Structure	456
Exploring the Anatomy of a Frame Member	456

Inserting Frame Members	458
Specifying a Structural Shape	458
Changing the Orientation	458
Selecting Placement Geometry	460
Aligning Frame Members	464
Adding End Treatments	466
Miter	466
Trim to Frame Member	469
Trim and Extend to Face	469
Notch Frame Members	469
Lengthen–Shorten Frame Member	471
Maintaining Frames	471
Remove End Treatments	472
Frame Member Information	472
Refresh	472
Performing Analysis	472
Model Tab	472
Beam Calculation Tab	474
Beam Graphs	477
Column Calculator	478
HTML Results	478
Publishing Frame Members	478
Authoring a Part	479
Publishing a Part	482
The Bottom Line	482
Chapter 16 • Inventor Studio	485
Exploring the Inventor Studio Environment	485
Creating and Managing Studio Styles	486
Surface Styles Dialog Box	487
Lighting Styles Dialog Box	493
Scene Styles Dialog Box	500
Composing and Rendering Images	503
Animating with Studio	508
Using Animation Commands	509
Using Video Producer	517
Rendering Video or Animations	520
The Bottom Line	521
Appendix A • The Bottom Line	523
Chapter 1: Inventor Design Philosophy	523
Chapter 2: Data and Projects	524
Chapter 3: Sketch Techniques	527
Chapter 4: Basic Modeling Techniques	528
Chapter 5: Advanced Modeling Techniques	529
Chapter 6: Sheet Metal	530

Chapter 7: Part and Feature Reuse	533
Chapter 8: Assembly Design Workflows	534
Chapter 9: Large Assembly Strategies	535
Chapter 10: Weldment Design	536
Chapter 11: Functional Design	538
Chapter 12: Documentation	539
Chapter 13: Inventor Tools Overview	540
Chapter 14: Exchanging Data With Other Systems	541
Chapter 15: Frame Generator	543
Chapter 16: Inventor Studio	544
