

CONTENTS

Tables and Figures	xi
Foreword	xv
Preface	xvii
The Authors	xix
Introduction	xxi

PART ONE: SCIENTIFIC AND SOCIAL PERSPECTIVES ON GENOMICS

CHAPTER ONE: PAST, PRESENT, AND FUTURE OF PUBLIC HEALTH GENOMICS	3
History of Human Genetics	4
History of Public Health Genetics	5
Impact of Genetics on Primary, Secondary, and Tertiary Prevention	5
Phenotypic versus Genotypic Prevention	8
Genomics Today	9
Genomics Tomorrow	12
CHAPTER TWO: GENOMICS AND GOVERNMENT	15
The NIH and the NHGRI	16
The NOPHG	19
The SACGHS	21
State Government Programs	22
Genomics and Bioterrorism Preparedness	24
CHAPTER THREE: BASIC MOLECULAR GENETICS	27
Hereditary Material	28
DNA Replication	30

Transcription and Translation	33
Gene Expression	37
Mutations and Polymorphisms	38
CHAPTER FOUR: MUTATIONS, POPULATION GENETICS, AND ETHNICITY	41
Somatic versus Germline Mutations	42
Types of Mutations	43
Causes of Mutations	44
Population Genetics	45
Race, Ethnicity, and Genomics	50
CHAPTER FIVE: INHERITANCE PATTERNS AND FAMILY HISTORY	53
Gregor Mendel and His Pea Plants	54
Autosomes and Sex Chromosomes	56
Drawing a Pedigree	57
Non-Mendelian Inheritance Patterns	61
Inheritance Patterns, Family History, and Public Health	65
CHAPTER SIX: GENETIC EPIDEMIOLOGY AND GENE-ENVIRONMENT INTERACTIONS	71
Review of Basic Concepts	72
Polygenic and Multifactorial Traits	72
Determining the Risk of Multifactorial Disorders	74
Determining Genetic versus Environmental Effects	75
Determining Patterns of Inheritance and Localizing Genes	76
Gene-Environment Interactions and Molecular Epidemiology	79
CHAPTER SEVEN: GENETIC INFORMATION, ETHICS, AND THE LAW	83
Examples of Genetic Discrimination and Breach of Privacy	84
Evolution of Privacy and Antidiscrimination Laws	85
Genetics Research and Concern for Privacy	88
Clinical Genetic Testing and the Duty to Inform	90

PART TWO: GENOMICS IN MATERNAL, CHILD, AND ADULT HEALTH

CHAPTER EIGHT: TOXICOLOGY, TERATOLOGY, AND PRENATAL DIAGNOSIS	97
Birth Defects and Embryology	98
Chromosomes	103
Prenatal Diagnosis	111
Preimplantation Genetic Diagnosis	113
CHAPTER NINE: PRECONCEPTIONAL GENETIC SCREENING AND CULTURAL COMPETENCE	117
Genetic Diseases Common among People of Ashkenazic Jewish Descent	118
Genetic Diseases Common among People of Sephardic and Mizrahi Jewish Descent	122
Reproductive Options for Carriers	123
Limitations of Ethnically Based Genetic Screening	123
CHAPTER TEN: METABOLIC DISORDERS AND NEWBORN SCREENING	127
Newborn Screening's Relevance to Public Health	128
Biology of Metabolic Disorders	131
Newborn Screening in California	132
MS/MS-Detectable Disorders	135
CHAPTER ELEVEN: PEDIATRIC GENETICS AND HEALTH SUPERVISION	141
American Academy of Pediatrics	142
Achondroplasia	143
Down Syndrome	145
Fragile X Syndrome	146
Marfan Syndrome	148
Prader-Willi Syndrome	148
Autism	149

CHAPTER TWELVE: ADULT GENETICS, GENETIC COUNSELING, AND HEALTH BEHAVIOR	153
Alzheimer’s Disease	154
Cardiovascular Disease	155
Cancer	157
Familial Cancer Syndromes	160
Genetic Testing, Risk Perception, and Health Behavior	163

PART THREE: AREAS OF GENERAL INTEREST

CHAPTER THIRTEEN: HEALTH ECONOMICS, HEALTH DISPARITIES, AND GENETIC SERVICES	171
Basics of Health Economics	172
Health Economics of Genetic Screening	174
Health Care Disparities	175

CHAPTER FOURTEEN: GENOMICS AND COMMUNICABLE DISEASE CONTROL	181
Bacteria	182
Viruses	189
Genomics of a Pandemic	192

CHAPTER FIFTEEN: HOT TOPICS IN GENOMICS	195
Personalized Medicine	196
Gene Therapy	199
Stem Cell Research	201

CHAPTER SIXTEEN: BIOINFORMATICS AND GENOMICS ONLINE	205
Clinical and Community Resources	206
Ethical, Legal, and Social Issues	207
Genetic Epidemiology	208
Government Agencies	209

Maternal and Child Health	209
Professional Genetics Education	210
Professional Genetics Societies	211
Professional Public Health Societies	211
Research Resources	212
Appendix 1: Answers to Selected Discussion Questions	215
Glossary	219
References	241
Name Index	253
Subject Index	257

TABLES AND FIGURES

TABLES

1.1.	U.S. Preventive Services Task Force Recommendation Grades	10
1.2.	The Future of Genomics	13
2.1.	NIH Institutes and Centers	17
2.2.	CDC Public Health Genomics Initiatives	20
2.3.	Common Pathogens Whose Genomes Have Been Sequenced	25
3.1.	Structural Differences between DNA and mRNA	34
3.2.	Amino Acids and Their Associated mRNA Codons	34
7.1.	Overview of State Laws Regarding Genetic Privacy	87
8.1.	FDA Pregnancy Categories	102
10.1.	Disorders Screened for in Newborns by California Department of Health, Using Tandem Mass Spectrometry (MS/MS)	133
10.2.	Results of Screening Test for a Disorder with Low Prevalence	134
12.1.	Single-Gene Disorders Associated with Cardiovascular Disease	156
12.2.	Genes That May Play a Role in Susceptibility to Cardiovascular Disease	157
14.1.	Common Bacteria, Their Types, and Associated Diseases	184
14.2.	Categories of Viruses, with Examples	190

FIGURES

3.1.	Schematic Diagram of a Nucleotide	29
3.2.	Chain of Nucleotides Making Up a Single Strand of DNA	29
3.3.	Single Strand of DNA (Simplified)	30
3.4.	Double-Stranded DNA (Simplified)	30
3.5.	Schematic Diagram of a Cell	31
3.6.	Simplified Schematic Diagram of the Cell Nucleus Before and After DNA Replication and Cell Division	32
4.1.	Punnett Square	49

5.1.	Simple Pedigree	57
5.2.	Sample Autosomal Dominant Pedigree	58
5.3.	Sample Autosomal Recessive Pedigree	59
5.4.	Sample X-Linked Dominant Pedigree	60
5.5.	Sample X-Linked Recessive Pedigree	60
5.6.	Sample Pedigree of a Mitochondrially Inherited Disorder	64
5.7.	Adaptation of “My Family Health Portrait” Family History Tool	67
5.8.	Sample Family Health Portrait	68
8.1.	The Early Human Embryo	98
8.2.	The “Standard” Chromosome	104
8.3.	The Three Chromosome “Shapes”	105
8.4.	Sample Idiotype of a Chromosome (Simplified Chromosomal Banding Pattern)	106
8.5.	The Stages of Meiosis	108
10.1.	Simplified Metabolic Pathway	131
13.1.	Formula for Cost-Effectiveness Calculations	172
13.2.	Quadrants of Cost-Effectiveness	173
14.1.	Bacterial Shapes	183
