Introduction to Power Electronics and Drives 1

Bimal K. Bose, University of Tennessee, USA

Chapter 1 Power Semiconductor Devices for Variable Frequency Drives 9

B. J. Baliga, North Carolina State University, USA

- 1.1 INTRODUCTION 9
- 1.2 BASIC VARIABLE SPEED DRIVE 12
- 1.3 POWER MOSFET 15
- 1.4 INSULATED GATE BIPOLAR TRANSISTOR 17
- 1.5 POWER RECTIFIERS 20
- 1.6 MOS-GATED THYRISTORS 24
- 1.7 NEW SEMICONDUCTOR MATERIALS 28
- 1.8 DEVICE COMPARISON 31
- 1.9 SMART POWER CONTROL CHIPS 32
- 2.0 CONCLUSION 33
- References 34

Chapter 2	Electrical Machines for Drives	36
	<i>G.R. Slemon, University of Toronto, Canada</i>	
2.1	INTRODUCTION	36
2.2	MOTOR REQUIREMENTS FOR DRIVES	37
2.3	COMMUTATOR MOTORS	38
2.3.1	Torque Production	39
2.3.2	Losses and Cooling	39
2.3.3	Equivalent Circuit	40
2.3.4	Constant Power Operation	41
2.3.5	Operational Limitations	41
2.4	INDUCTION MOTORS	42
2.4.1	Production of Torque	43
2.4.2	Equivalent Circuit Model	44
2.4.3	Number of Poles	45
2.4.4	Torque Expressions	46
2.4.5	Losses and Efficiency	47
2.4.6	Dependence of Parameters on Size	48
2.4.7	Use in Industrial Drives	48
2.4.8	Constant Power Operation	50
2.4.9	Use in High-Performance Applications	51
2.4.10	Some Drive Design Considerations	52
2.4.11	Wound Rotor Motors	53
2.5	SYNCHRONOUS PERMANENT MAGNET MOTORS	53
2.5.1	Permanent Magnet Materials	54
2.5.2	Equivalent Circuit	56
2.5.3	Operating Characteristics	57
2.5.4	Magnet Protection	59
2.5.5	Losses and Efficiency	59
2.5.6	Use in Industrial Drives	61
2.5.7	Constant Power Applications	61
2.5.8	Use in High-Performance Drives	62
2.6	SWITCHED OR TRAPEZOIDAL PM MOTORS	62
2.6.1	Star-Connected Motor	62
2.6.2	Torque Production	63
2.6.3	Losses and Efficiency	64
2.6.4	Delta-Connected Motor	64
2.6.5	Design Features	65
2.6.6	Operating Characteristics	65
2.7	SYNCHRONOUS RELUCTANCE MOTORS	66
2.7.1	Equivalent Circuit	66
2.7.2	Torque Capability	67
2.7.3	Operating Condition and Power Factor	67
2.7.4	Configurations	68
2.7.5	Losses and Efficiency	68
2.7.6	Constant Power Operation	68
2.8	PM RELUCTANCE MOTORS	68
2.9	SWITCHED RELUCTANCE MOTORS	70
2.9.1	Torque Relations	71

- 2.9.2 Losses and Efficiency 72
- 2.9.3 Design and Application Considerations 73
- 2.10 WOUND FIELD SYNCHRONOUS MOTORS 74
- 2.11 LINEAR MOTORS 74
- 2.12 CONCLUSION 75
 - Nomenclature 76
 - References 76

Chapter 3 **Power Electronic Converters for Drives 80**

J. D. van Wyk, Rand Afrikaans University, South Africa

- 3.1 INTRODUCTION 80
- 3.2 DEVELOPMENT OF POWER ELECTRONIC CONVERTERS AND ITS APPLICATION TO DRIVE TECHNOLOGY 81
 - 3.2.1 A Systematic Overview of Applied Power Electronic Converters 81
 - 3.2.2 Historical Development of Power Electronic Converters for Motion Control 83
- 3.3 SOME FUNCTIONAL CONSIDERATIONS REGARDING SWITCHING CONVERTERS AND THEIR APPLICATIONS TO VARIABLE FREQUENCY DRIVES 83
 - 3.3.1 Controlling Average Energy Flow by Switching Converters 85
 - 3.3.2 Topology and Structure of Power Electronic Converters 90
 - 3.3.3 The Fundamental Dilemma of Switching Converters 99
 - 3.3.4 Converter Structures for Variable Frequency Drives 100
- 3.4 POWER ELECTRONIC CONVERTERS FOR CONTROL OF AMPLITUDE 103
 - 3.4.1 DC-to-DC Converters 103
 - 3.4.2 AC-to-DC Converters 105
- 3.5 POWER ELECTRONIC CONVERTERS FOR AC VARIABLE FREQUENCY DRIVES 106
 - 3.5.1 AC-DC-AC Converters for Current-Fed Inverter Drives 106
 - 3.5.2 AC-DC-AC Converters for Voltage-Fed Inverter Drives 108
 - 3.5.3 Supply Interaction of AC-DC-AC Converters 108
 - 3.5.4 More Extended Converter Families 109
 - 3.5.5 Minimum Converter Topologies 111
- 3.6 SWITCH APPLICATIONS TECHNOLOGY 114
 - 3.6.1 Turning Power Electronic Switches On and Off 116
 - 3.6.2 Reduction of Switching Losses in Practical Switches 117
 - 3.6.3 Converter Protection and Cooling 124
 - 3.6.4 Further Converter Applications Technology 125
- 3.7 FUTURE CONVERTER DEVELOPMENT IN RELATION TO ELECTROMAGNETICS 125
 - 3.7.1 Switching Converter Electromagnetics 126
 - 3.7.2 Electromagnetics and EMI/EMC 126
- 3.8 CONCLUSION 127
 - References 128

Chapter 4 **Pulse Width Modulation for Electronic Power Converters 138**

J. Holtz, Wuppertal University, Germany

- 4.1 INTRODUCTION 138
- 4.2 DC-TO-AC POWER CONVERSION 139
 - 4.2.1 Principles of Power Amplification 139

4.2.2	Semiconductor Switches	140
4.2.3	The Half-Bridge Topology	142
4.2.4	Three-Phase Power Conversion	143
4.3	AN INTRODUCTION TO SPACE VECTORS	145
4.3.1	Definitions	145
4.3.2	Normalization	147
4.3.3	Switching State Vectors	147
4.3.4	Generalization	148
4.4	PERFORMANCE CRITERIA	148
4.4.1	Current Harmonics	149
4.4.2	Harmonic Spectrum	150
4.4.3	Space Vector Trajectories	151
4.4.4	Maximum Modulation Index	152
4.4.5	Torque Harmonics	152
4.4.6	Switching Frequency and Switching Losses	152
4.4.7	Polarity Consistency Rule	153
4.4.8	Dynamic Performance	153
4.5	OPEN LOOP SCHEMES	154
4.5.1	Carrier-Based PWM	154
4.5.2	Carrierless PWM	164
4.5.3	Overmodulation	167
4.5.4	Optimized Open Loop PWM	169
4.5.5	Switching Conditions	174
4.6	CLOSED LOOP PWM CONTROL	180
4.6.1	Nonoptimal Methods	180
4.6.2	Closed Loop PWM with Real-Time Optimization	184
4.6.3	Real-Time Adaptation of Preoptimized Pulse Patterns	187
4.7	MULTILEVEL CONVERTERS	192
4.7.1	Twelve-Step Operation	192
4.7.2	Switching-State Vectors	195
4.7.3	Three-Level Pulse Width Modulation	197
4.8	CURRENT SOURCE INVERTER	202
4.9	CONCLUSION	203
	Nomenclature	204
	References	205

Chapter 5 **Motion Control with Induction Motors** 209

R. D. Lorenz, T. A. Lipo, D. W. Novotny, University of Wisconsin, USA

5.1	INTRODUCTION	209
5.2	INVERTERS FOR ADJUSTABLE SPEED	210
5.2.1	Basic Six-Step Voltage Source Inverter	210
5.2.2	The Pulse Width Modulated VSI Inverter	215
5.2.3	The Current Source Inverter Drive	219
5.3	MOTION CONTROL SYSTEMS	223
5.3.1	Classical, Industry Standard, Digital Motion Control with FO-IM	224
5.3.2	State Variable, Digital Motion Control with FO-IM	225
5.3.3	Zero Tracking Error, State Variable, Digital Motion Control with FO-IM	227
5.3.4	Feedback Sensor Issues for Motion Control with FO-IM	228

- 5.3.5 Observer-Based Feedback Issues for Motion Control with FO-IM 231
- 5.3.6 State Variable, FO-IM, Digital Motion Control with Acceleration Feedback 232
- 5.3.7 Summary of Motion Control Requirements for FO-IM 233
- 5.4 FIELD ORIENTATION (FO) CONTROL PRINCIPLES FOR INDUCTION MOTORS 235
 - 5.4.1 Direct Field Orientation 237
 - 5.4.2 Indirect (Feedforward) Field Orientation 237
 - 5.4.3 Influence of Parameter Errors 238
 - 5.4.4 Selection of Flux Level 239
- 5.5 CURRENT REGULATORS FOR MOTION CONTROL WITH FO-IM 239
 - 5.5.1 Hysteresis and Bang-Bang Current Regulators 240
 - 5.5.2 PI Current Control with Ramp Comparison, Constant Frequency PWM 243
 - 5.5.3 Predictive (Optimal) Current Controllers 248
 - 5.5.4 Summary of Current Regulators for Motion Control with FO-IM 250
- 5.6 ADVANCED FLUX AND TORQUE REGULATION METHODS FOR MOTION CONTROL WITH FO-IM 251
 - 5.6.1 Flux Accessory Issues 251
 - 5.6.2 Open Loop Flux Observers for Direct Field Orientation at Zero Speed 251
 - 5.6.3 Open Loop Flux Observers in Indirect Field Orientation 252
 - 5.6.4 Closed Loop Flux Observers and Direct Field Orientation—Rotor Flux 253
 - 5.6.5 Closed Loop Flux Observers and Direct Field Orientation—Stator Flux 255
 - 5.6.6 Direct Rotor Flux Orientation, Stator Flux Regulation, and Closed Loop Flux Observers 257
 - 5.6.7 Summary of Advanced Flux and Torque Regulation Methods for Motion Control Using FO-IM 257
- 5.7 SELF-COMMISSIONING AND CONTINUOUS SELF-TUNING FOR FO-IM 258
 - 5.7.1 Statistical Approaches to Parameter Estimation 260
 - 5.7.2 Statistical Regression Model Formulation—Induction Motor Estimation at Constant Speed 261
 - 5.7.3 Rotor Time Constant and Resistance and Inductance Parameter Extraction 263
 - 5.7.4 Statistical Regression Model Formulation—Mechanical Load Parameters 263
 - 5.7.5 Operating Condition and Input Excitation Limitations for Statistical Estimation 264
 - 5.7.6 Summary of Statistical Methods for FO-IM 265
 - 5.7.7 Adaptive Control Approaches to Parameter Estimation for FO-IM 266
 - 5.7.8 Recursive, Least Squares 266
 - 5.7.9 MRAC Approaches 266
 - 5.7.10 Deadbeat, Adaptive Control Approaches 267
- 5.8 CONCLUSION 270
 - Acknowledgment 271
 - Nomenclature 272
 - References 273

Chapter 6 **Variable Frequency Permanent Magnet AC Machine Drives** 277

T. M. Jahns, General Electric Co., USA

- 6.1 INTRODUCTION 277
 - 6.1.1 Background 279

6.1.2	Motion Control Performance Requirements	279
6.2	PMAC MACHINE CONTROL FUNDAMENTALS	281
6.2.1	Sinusoidal Versus Trapezoidal PMAC Machines	281
6.2.2	Converter Configurations	282
6.2.3	Position Synchronization	285
6.2.4	Mechanical Drive Configurations	287
6.2.5	PMAC Drive Control Structure	287
6.3	TRAPEZOIDAL PMAC MACHINE CONTROL	290
6.3.1	Machine Control Characteristics	290
6.3.2	Basic Control Approach	291
6.3.3	Torque Ripple	297
6.3.4	High-Speed Operation	298
6.4	SINUSOIDAL PMAC MACHINE CONTROL	301
6.4.1	Machine Characteristics	301
6.4.2	Basic Control Approach	303
6.4.3	Torque Ripple	308
6.4.4	High-Speed Operation	309
6.5	ADVANCED CONTROL TECHNIQUES	313
6.5.1	Position Sensor Elimination	313
6.5.2	Current Sensor Elimination and Advanced Regulators	316
6.5.3	Robust Control	317
6.6	PMAC DRIVE APPLICATION ISSUES	317
6.6.1	Motor Drive Comparisons	317
6.6.2	PMAC Drive Application Trends	318
6.6.3	Future Application Trends	323
6.7	CONCLUSION	324
	References	325

Chapter 7 **High Power Industrial Drives** 332

H. Stemmler, Swiss Federal Institute of Technology, Switzerland

7.1	INTRODUCTION	332
7.2	CLASSIFICATION WITH SPEED AND POWER RATINGS	333
7.3	SHORT REVIEW OF THE EVOLUTION OF LARGE DRIVES	334
7.4	MOTORS FOR LARGE DRIVES	336
7.4.1	Types of Motors Used	336
7.4.2	Mathematical Representation of AC Motors	337
7.5	CONVERTERS FOR LARGE DRIVES	345
7.5.1	Basic Circuits	345
7.5.2	Converter Configurations	348
7.6	SYNCHRONOUS MOTORS, FED BY EXTERNALLY COMMUTATED CURRENT SOURCE CONVERTERS	350
7.6.1	Basic Principle	350
7.6.2	Operation Modes	351
7.6.3	Practical Implementations of the System	355
7.6.4	Applications	359
7.6.5	Future Trends	360
7.7	INDUCTION MOTORS FED BY CURRENT SOURCE CONVERTERS	362
7.7.1	Basic Principle	362

7.7.2	Operation Modes	362
7.7.3	Resonance Problems	365
7.7.4	How to Avoid Resonance Problems	366
7.7.5	Basic Control Structure	367
7.7.6	Applications—Practical Implementations	368
7.7.7	Future Trends	368
7.8	THE CYCLOCONVERTER-FED SYNCHRONOUS MOTOR	369
7.8.1	Basic Principle	369
7.8.2	Mode of Operation	369
7.8.3	Practical Implementations of the System	373
7.8.4	Applications	373
7.8.5	Future Trends	374
7.9	LARGE VOLTAGE SOURCE INVERTER DRIVES	375
7.9.1	Characteristics of Today's Voltage Source Inverters	375
7.9.2	Two-Level Inverter Drives	377
7.9.3	Optimization Goal	379
7.9.4	Three-Level Inverter Drives	380
7.9.5	Low-Inductance Design	383
7.9.6	Controls	384
7.9.7	Future Trends	384
7.10	SLIP POWER-CONTROLLED DRIVES	386
7.10.1	Introduction	386
7.10.2	Sub- and Hpersynchronous Cascades	387
7.11	CONCLUSION	395
	Nomenclature	396
	References	397

Chapter 8 Simulation of Power Electronic and Motion Control Systems 400
N. Mohan, W. P. Robbins, L. A. Aga, M. Rastogi, R. Naik, University of Minnesota, USA

8.1	INTRODUCTION	400
8.1.1	Power Electronics Environment	400
8.1.2	Need for Simulation	401
8.2	SIMULATION IN THE DESIGN PROCESS	402
8.3	FREQUENCY DOMAIN VERSUS TIME DOMAIN ANALYSIS	403
8.4	CHALLENGES IN SIMULATION	404
8.4.1	Requirements on a Simulation Program	404
8.4.2	Challenges to the User of Simulation Tools	405
8.5	CLASSIFICATION OF SIMULATION TOOLS AND HISTORICAL OVERVIEW	407
8.5.1	Transient Network Analyzers and DC (HVDC) Simulators	407
8.5.2	Analog and Hybrid Computers	408
8.5.3	Digital Simulators	408
8.6	ISSUES IN NUMERICAL SOLUTION	411
8.6.1	Numerical Intergration Methods	411
8.6.2	Nonlinear Differential Equations	414
8.6.3	Automatic Time-Step Control	414
8.6.4	Treatment of Switches	415
8.7	OVERVIEW OF SOME WIDELY USED SIMULATION PROGRAMS	417
8.7.1	SPICE	417

- 8.7.2 EMTF 418
- 8.7.3 MATLAB/SIMULINK 419
- 8.8 OVERVIEW OF SIMULATOR CAPABILITIES BY EXAMPLES 420
 - 8.8.1 Representation of Switching Action Using PSpice 420
 - 8.8.2 Thyristor Converter Representation Using EMTF 422
 - 8.8.3 Field-Oriented Control of Induction Motor Drives 424
- 8.9 POWER SEMICONDUCTOR DEVICE MODELS FOR CIRCUIT SIMULATION 436
 - 8.9.1 Introduction 436
 - 8.9.2 Currently Available Models and Their Shortcomings 436
 - 8.9.3 Difficulties in Modeling Bipolar Devices 437
 - 8.9.4 Improvements in Bipolar Device Modeling 438
 - 8.9.5 Problems in Modeling Majority Carrier Devices 440
 - 8.9.6 Future Outlook 442
- 8.10 CONCLUSION 443
 - References 443
 - Appendix 447

Chapter 9 **Estimation, Identification, and Sensorless Control of AC Drives 454**

K. Ohnishi, Keio University; N. Matsui, Nagoya Institute of Technology; Y. Hori, University of Tokyo; Japan

- 9.1 INTRODUCTION 454
- 9.2 PARAMETER ESTIMATION IN AC DRIVES 455
 - 9.2.1 Parameter Identification in Brushless Motors 455
 - 9.2.2 Parameter Identification in Induction Motor 461
- 9.3 SENSORLESS DRIVES OF AC MOTORS 465
 - 9.3.1 Sensorless Drives of Brushless Motors 465
 - 9.3.2 Sensorless Drives of Vector-Controlled Induction Motors 467
- 9.4 ROBUST MOTION CONTROL BY ESTIMATION OF MECHANICAL PARAMETERS 470
 - 9.4.1 Estimation of Disturbance Torque 470
 - 9.4.2 Estimation of Instantaneous Speed and Varied Inertia 474
- 9.5 CONCLUSION 477
 - References 478

Chapter 10 **Microprocessors and Digital ICs for Control of Power Electronics and Drives 480**

H. Le-Huy, Laval University, Canada

- 10.1 INTRODUCTION 480
- 10.2 MICROCOMPUTER CONTROL OF POWER ELECTRONIC SYSTEMS 482
 - 10.2.1 Controlling Power Electronic Systems 482
 - 10.2.2 Microcomputer Control of Power Electronic Systems 485
 - 10.2.3 Processor Selection 489
 - 10.2.4 Digital Versus Analog Control 492
- 10.3 MICROCOMPUTER BASICS 493
 - 10.3.1 Microcomputer Architecture 493
 - 10.3.2 Microprocessors 497

10.3.3	Memory	499
10.3.4	Input/Output	500
10.4	REAL-TIME CONTROL USING MICROCOMPUTERS	500
10.4.1	Digital Input-Output	502
10.4.2	Analog Input-Output	504
10.4.3	Interrupt Controller	507
10.4.4	Time Processing Devices	508
10.4.5	Communication Interface	510
10.5	MICROCONTROLLERS	512
10.5.1	Intel Microcontrollers	512
10.5.2	Motorola Microcontrollers	515
10.6	ADVANCED MICROPROCESSORS FOR CONTROL OF POWER ELECTRONIC SYSTEMS	516
10.6.1	Digital Signal Processors (DSPs)	518
10.6.2	Reduced Instruction Set Computing Processors	525
10.6.3	Parallel Processors: Transputers and Parallel DSPs	529
10.7	ASICs FOR CONTROL OF POWER ELECTRONIC SYSTEMS	534
10.7.1	ASIC Terminology	535
10.7.2	ASIC Design	536
10.7.3	Field-Programmable Gate Arrays and Programmable Logic Devices	537
10.7.4	Examples of ASICs for Control of Power Electronic Systems	538
10.8	DESIGN OF MICROPROCESSOR-BASED CONTROL SYSTEMS	539
10.8.1	Development Cycle	540
10.8.2	System Requirements and Preliminary Design	540
10.8.3	Hardware and Software Partitioning and Trade-offs	541
10.8.4	Hardware Design	541
10.8.5	Software Design	543
10.8.6	System Integration and Performance Evaluation	544
10.9	DEVELOPMENT TOOLS	545
10.9.1	Development System	545
10.9.2	Software Development Tools	547
10.10	APPLICATION EXAMPLES	548
10.11	CONCLUSION	551
	References	552

Chapter 11 **Expert System, Fuzzy Logic, and Neural Networks in Power Electronics and Drives** 559

B. K. Bose, University of Tennessee, USA

11.1	INTRODUCTION	559
11.2	EXPERT SYSTEM	560
11.2.1	Expert System Principles	561
11.2.2	Knowledge Base	564
11.2.3	Expert System Shell	566
11.2.4	Design Methodology	570
11.2.5	Application in Power Electronics and Drives	570
11.3	FUZZY LOGIC	577
11.3.1	Fuzzy Logic Principles	578
11.3.2	Fuzzy Control	580

11.3.3	Modeling and Estimation	585
11.3.4	Design Methodology and Control Implementation	586
11.3.5	Application in Power Electronics and Drives	587
11.4	NEURAL NETWORK	602
11.4.1	Neural Network Principles	604
11.4.2	Tranining of Feedforward Neural Network	607
11.4.3	Fuzzy Neural Network	611
11.4.4	Design Methodology and Implementation	612
11.4.5	Application in Power Electronics and Drives	613
11.5	SUMMARY	624
11.6	GLOSSARY	624
	References	627

Index 631**Biography of Dr. Bose 639**
