

Index

- Abduction–adduction, 38, 58, 60, 61, 62, 65, 67, 236, 243, 252, 262–265, 270, 275
- Accelerometers, 81, 119, 122, 169–170, 190, 286, 287
- Actuators, 181–189
 - Bioinspired, 8, 194–198
 - EAP, 185
 - ERF, 185–186
 - FES, 110, 174, 283
 - Hydraulic, 4, 11, 181–183, 186, 224
 - MRF, 185–186
 - Pneumatic, 5, 28, 182, 271–278, 291–292, 311–314
 - Series elastic, 28, 181–183
 - SMA, 186–189
 - Ultrasonic, 38, 39, 237, 253
- Afferent system (*see* Sensory system, physiology), 242
- Algorithms
 - Common spatial patterns (CSP), 95
 - Frequency domain (EMG), 101–102
 - Independent component analysis (ICA), 95
 - Principal component Analysis (PCA), 94
 - Time domain (EMG), 99–101
- Bandwidth
 - Actuator, 147, 182, 188, 266, 291
 - Communication networks, 122, 218, 221, 230–232
 - Control, 114, 143, 263, 272
 - Sensor, 245, 286
- Bioimitation, 13, 32, 324
- Bioinspiration, 6–9, 17–44, 74–79, 242–245, 323–326
- Biomechanics, 17, 41, 56–70, 236, 241, 246, 247, 250, 255, 290, 297, 299, 311, 326, 332
 - Dynamics, 67–70
 - Human movements, 57–59
 - Lower limb model, 67, 74–79, 283–289
 - Models, 31, 42, 195–198, 327
 - Monitoring, 104–108, 226–229
 - Upper limb model, 65–67, 79–83, 256–257
- Biomechatronics, 168, 169, 226, 323, 324
 - Biological inspiration, 8–9
 - Design, 242–248
 - Interaction, 9
 - Optimization procedures, 9
 - Principles, 6–9
 - Trends, 330–331
- Biomimeticism, 32, 324
- BLEEX exoskeleton, 223–226
- Bluetooth, 119, 201, 214–216, 222, 228, 286
- Brain–computer interface (BCI), 87, 93, 115, 226, 314, 315
- Capacitive sensors, 170, 176, 180
- Central nervous system (CNS), 25, 91, 97, 99, 139, 220
- Central pattern generators (CPGs), 25, 40–44
- Circumduction, 58, 60, 65, 67, 299, 300
- Classifiers
 - Gaussian, 103, 108
 - Neural networks, 103, 108, 319
 - Threshold based, 102–103, 108
- Comfort (*see* Ergonomics), 5
 - Microclimate, 191–194
- Communication networks
 - Latency, 204
 - Power consumption, 204–205
 - Quality of service (QoS), 204–205, 214
 - Throughput, 203
 - Topology, 206–208
- Controller area network (CAN), 211–212, 227–229, 254
- CyberHand robotic prosthesis, 241–248
- Denavit–Hartenberg, 13, 47, 51–52, 130, 326
 - Lower limb model, 61–64, 67
 - Upper limb model, 59–61, 65–67, 81

- Dynamics, 47–74, 105
 Forward, 53, 69
 Human, 67–70
 Inverse, 53, 54, 69, 70
 Robot, 53–56
- Efferent system (*see* Motor system, physiology), 25
- Electroencephalography (EEG), 13, 15, 89–96, 209, 226, 227
 Algorithms, 93–96
 Control, 314–319
 Models, 92–93
 Physiology, 90–92
 Sensors, 171–175, 229
- Electrogoniometers, 168–169
- Electromyography (EMG), 7, 13, 27, 209, 226, 330
 Algorithms, 99–104, 292
 Control, 9, 32, 39–40, 258, 292, 331
 Models, 98–99
 Physiology, 97–98
 Sensors, 171–175, 228
- Encoders, 166–167, 224, 244
- Equations of motion, 13, 54, 83, 261, 326
- Ergonomics, 129
- Ergonomics, 5, 6, 10, 14, 130–133, 248–254
 Design, 65, 133, 252
 Interaction forces, 150–155
- Euler angles, 48–51
- EXARM exoskeleton, 248–254
- Exoskeletons
 Actuators for (*see* Actuators), 180
 Batteries for (*see* Portable energy storage), 189
 Classification, 1–3, 10–11
 Definition, 5–6
 Empowering, 304–314
 Full-body, 304–314
 Lower limb, 283–304
 Neuromotor research, 254–259
 Orthotic, 236–241, 283–295
 Rehabilitation, 259–278
 Sensors for (*see* Sensors), 166
 Technologies, 9–10
 Teleoperation, 248–254
 Upper limb, 235–278
- Extender, 1, 176
- Extenders (*see* Exoskeletons, empowering), 4
- External force, 5, 10, 53, 57, 69, 139, 144
- Flexion–extension, 38, 60, 58, 61–63, 65, 67, 75, 79, 81–82, 236, 252, 263–265, 270
- GAIT–ESBiRRO exoskeleton, 20, 23, 32, 40–44, 159–162, 189–191, 194–198, 283–289
- Genetic algorithms, 8, 9, 13, 23, 74–79, 324, 326
- Gyroscopes, 80, 81, 83, 107, 110, 114, 158, 170–171, 190, 237, 239, 286
- HAL exoskeleton, 32, 304–307
- Hall effect sensors, 40, 167–168, 244
- Hierarchical
 Bioinspired control, 36–40
 Motor control, 9, 25, 27, 324, 326
 Network topology, 206–208, 216
- Homogeneous coordinates, 49
- H–R Interaction (cognitive), 3, 87–122
 Biomechanically based, 104–108
 Cortical activity control, 115–118
 EEG based, 89–96, 314–319
 EMG based, 96–104
 PNS interface, 242–248
- H–R Interaction (physical), 3, 127–162
 Application of load, 134–138
 Control of, 138–150
 Kinematic compatibility, 130–133
 Tolerance to pressure, 134–135
- Human–computer interface (HCI) (*see* H–R Interaction (cognitive)), 87
- Human–machine interface (HMI), 87, 98, 262, 263, 265, 268
- Humidity sensors, 179–180, 191–194
- Hybrid position/force control, 140–142
- Impedance control, 29, 108, 138–150, 228
 Full-body exoskeletons, 304–307
 Lower limb exoskeletons, 159–162
 Upper limb exoskeletons, 157–159, 272–275
- Inertial measurement unit (IMU) (*see* Inertial sensors), 286, 286–287
- Inertial sensors, 44, 107, 109, 169–171, 189–191
- Instantaneous centre of rotation (ICR), 53, 77, 131, 132, 150, 151, 328
- Interaction forces, 133–138
 Human tolerance, 134–135, 155–156
 Quantified, 150–155

- Shear, 133, 135, 138, 153, 176, 284, 285
 Support design, 137–138
 Internal force, 5, 6, 10
 Internal models, 13, 27, 32, 40–44, 139, 324, 326
 Inversion–eversion, 64, 67
 Joints, 47, 51, 52, 57, 249, 250, 254, 256, 271, 272
 Anatomical, 59, 61, 79–80
 Ankle, 64, 224, 285
 Cylindrical, 52
 Elbow, 60–61, 227, 236, 259, 312
 Hip, 62–63, 224
 Kinematic compatibility, 79–80, 130–133
 Knee, 63–64, 74–79, 224, 284, 285, 301, 302
 Prismatic, 52, 56
 Revolute, 52, 56
 Shoulder, 60, 252, 259, 311
 Spherical, 52
 Wrist, 61, 227, 236
 Kinematics, 32, 47–74, 105, 109, 110
 Compatibility, 130–133
 Compliance, 74–80
 Forward, 48, 51–53, 65, 71
 Full-body WRs, 304–314
 Human, 31, 32, 56–67
 Interaction forces (*see* Ergonomics, interaction forces), 150
 Inverse, 48, 50, 65, 67, 71, 73, 74
 Lower limb WRs, 283–304
 Redundancy, 70–74
 Robot, 48–53
 Upper limb WRs, 235–278
 Lagrange–Euler formulation, 54, 55, 83
 LVDTs, 168
 Manipulability, 47, 52–56
 Maximum pressure tolerance (MPT), 134, 156
 Mechanoreceptors, 128, 244, 245
 mHMI (*see* H–R Interaction (physical)), 262
 Mobility, 11
 Kinematic, 48, 59–61, 70–74, 77–79, 326
 Locomotion, 5, 11, 105, 314–319
 Manipulation, 11, 36–40
 Model-based control, 27, 140, 146–150
 Motor system, 23, 57, 147, 226, 228, 229
 Models, 24–27
 Physiology, 29–31
 Muscle
 Activity recording, 99–103
 Artificial pneumatic (*see* Actuators, pneumatic), 311
 Dynamics, 67–70
 FES (*see* Actuators, FES), 110
 Force estimation, 103–104, 310–311
 Impedance, 138–140
 Lower limb, 61–64
 Physiology, 27–29, 97–98
 Soft tissues, 135–137
 Types, 29
 Upper limb, 59–61
 NEUROBOTICS exoskeleton, 254–259
 NeuroLab exoskeleton, 226–229
 Newton–Euler formulation, 54, 70
 Optimization, 7, 8, 19, 110, 175, 243, 254, 324
 Biologically inspired, 9
 Evolutionary, 22–23, 324
 Kinematics and dynamics, 69–79
 Objective functions, 19–22
 Orthotic robots, 1, 2, 6, 10
 Biomechanical modelling, 80–83
 Control (*see* H–R Interaction (physical), control of), 109
 Design, 77–80, 137–138, 194–198
 Kinematics, 132
 Lower limb, 41, 283–295
 Orthoses, 4, 5, 32, 74, 75, 107, 156–162, 168, 169, 171, 176, 178, 182, 186
 Upper limb, 236–241
 Peripheral nervous system (PNS), 9, 25, 96, 97, 99
 Neural interface, 241–248
 Piezoelectric sensors, 170, 175–176
 Piezoresistive polymers, 178
 Portable energy storage, 189
 Potentiometers, 168, 227, 252, 257, 268, 305
 Power density (actuators), 39, 181, 243, 253
 Pressure discomfort threshold (PDT), 134
 Pressure pain threshold (PPT), 134, 155–156
 Pressure sensors, 178, 271, 273
 PROFIBUS, 212
 Pronation–supination, 39, 48, 58, 61, 64, 65, 79, 81, 236, 264, 265, 270
