

## Table of Contents

	<b>Preface</b>	<i>IX</i>
<b>1</b>	<b>Introduction</b>	<i>1</i>
<b>2</b>	<b>Technological and Energy Characteristics of the Chemical Process Industry</b>	<i>5</i>
2.1	Possibilities for Process-Efficiency Management Based on Existing Economic and Financial Instruments and Product Specifications in Coupled Manufacturing	<i>6</i>
2.2	Importance of Energy for Crude-Oil Processing in Oil Refineries	<i>8</i>
<b>3</b>	<b>Techno-economic Aspects of Efficiency and Effectiveness of an Oil Refinery</b>	<i>11</i>
3.1	Techno-economic Aspects of Energy Efficiency and Effectiveness in an Oil Refinery	<i>13</i>
3.2	Techno-economic Aspects of Process Efficiency and Effectiveness in an Oil Refinery	<i>15</i>
<b>4</b>	<b>Instruments for Determining Energy and Processing Efficiency of an Oil Refinery</b>	<i>21</i>
4.1	Instruments for Determining Energy and Processing Efficiency of Crude Distillation Unit	<i>25</i>
4.1.1	Technological Characteristics of the Process	<i>25</i>
4.1.2	Energy Characteristics of the Process	<i>27</i>
4.1.3	Determining the Steam Cost Price	<i>29</i>
4.1.4	Energy Efficiency of the Process	<i>30</i>
4.1.5	Refinery Product Cost Pricing	<i>32</i>
4.2	Instruments for Determining Energy and Processing Efficiency of Vacuum-distillation Unit	<i>38</i>
4.2.1	Technological Characteristics of the Process	<i>38</i>
4.2.2	Energy Characteristics of the Process	<i>39</i>
4.2.3	Determining the Steam Cost Price	<i>41</i>
4.2.4	Energy Efficiency of the Process	<i>42</i>
4.2.5	Determining the Refinery Product Cost Prices	<i>44</i>
4.3	Instruments for Determining Energy and Processing Efficiency of Vacuum-residue Visbreaking Unit	<i>50</i>

4.3.1	Technological Characteristics of the Process	50
4.3.2	Energy Characteristics of the Process	50
4.3.3	Determining the Steam Cost Price	53
4.3.4	Energy Efficiency of the Process	55
4.3.5	Determining the Refinery Product Cost Prices	57
4.4	Instruments for Determining Energy and Processing Efficiency of Bitumen Blowing Unit	60
4.4.1	Technological Characteristics of the Process	60
4.4.2	Energy Characteristics of the Process	63
4.4.3	Determining the Steam Cost Price	65
4.4.4	Energy Efficiency of the Process	66
4.4.5	Determining Refinery Product Cost Prices	68
4.5	Instruments for Determining Energy and Processing Efficiency of Catalytic Reforming Unit	69
4.5.1	Technological Characteristics of the Process	69
4.5.2	Energy Characteristics of the Process	70
4.5.3	Determining the Steam Cost Price	72
4.5.4	Energy Efficiency of the Process	72
4.5.5	Determining the Refinery Product Cost Prices	75
4.6	Instruments for Determining Energy and Processing Efficiency of Catalytic Cracking Unit	79
4.6.1	Technological Characteristics of the Process	81
4.6.2	Energy Characteristics of the Process	82
4.6.3	Determining the Steam Cost Price	85
4.6.4	Energy Efficiency of the Process	87
4.6.5	Determining the Refinery Cost Prices	89
4.7	Instruments for Determining Energy and Processing Efficiency of Gas Concentration Unit	94
4.7.1	Technological Characteristics of the Process	95
4.7.2	Determining the Refinery Product Cost Prices	96
4.8	Instruments for Determining Energy and Processing Efficiency of Jet-fuel Hydrodesulfurization Unit	99
4.8.1	Technological Characteristics of the Process	99
4.8.2	Energy Characteristics of the Process	103
4.8.3	Determining the Steam Cost Price	103
4.8.4	Energy Efficiency of the Process	105
4.8.5	Determining the Refinery Product Cost Prices	106
4.9	Instruments for Determining Energy and Processing Efficiency of Gas-Oil Hydrodesulfurization Unit	108
4.9.1	Technological Characteristics of the Process	108
4.9.2	Energy Characteristics of the Process	109
4.9.3	Determining the Steam Cost Price	110
4.9.4	Energy Efficiency of the Process	112
4.9.5	Determining the Refinery Product Cost Prices	114

4.10	Instruments for Determining Energy and Processing Efficiency of Alkylation Unit	116
4.10.1	Technological Characteristics of the Process	116
4.10.2	Energy Characteristics of the Process	117
4.10.3	Determining the Steam Cost Price	118
4.10.4	Energy Efficiency of the Process	120
4.10.5	Determining the Refinery Product Cost Prices	122
<b>5</b>	<b>Blending of Semi-Products into Finished Products and Determining Finished Product Cost Prices</b>	<b>129</b>
<b>6</b>	<b>Management in the Function of Increasing Energy and Processing Efficiency and Effectiveness</b>	<b>135</b>
6.1	Management in the Function of Increasing Energy Efficiency and Effectiveness	135
6.2	Management in the Function of Increasing Processing Efficiency and Effectiveness	138
6.2.1	Monitoring the Efficiency of Crude-oil Processing Through the System of Management Oriented Accounting of Semi-Product Cost Prices	139
6.2.2	Management Accounting in the Function of Monitoring the Main Target of a Company – Maximising Profit through Accounting System of Finished-Product Cost Prices	142
6.2.3	Break-Even Point as the Instrument of Management System in the Function of Making Alternative Business Decisions	144
