<b>I</b>	<b>Mammalian Models of CNS Regeneration</b>	<b>1</b>
<b>1</b>	<b>The Role of Inhibitory Molecules in Limiting Axonal Regeneration in the Mammalian Spinal Cord</b>	<b>3</b>
	<i>Patrick N. Anderson, Jez Fabes, and David Hunt</i>	
1.1	Introduction	3
1.1.1	CNS Neurons Have Widely Differing Phenotypes	3
1.2	Difficulties in Assessing Axonal Regeneration in the Mammalian Spinal Cord	4
1.2.1	Experimental Lesions and Problems of Interpretation	4
1.2.2	Tracing Regenerating Axons	6
1.2.2.1	Regeneration of Corticospinal Axons is Difficult to Assess	6
1.2.2.2	Regeneration of Ascending Dorsal Column Axons Can Be Measured Simply and Accurately	8
1.3	Myelin Proteins as Inhibitors of Axonal Regeneration	8
1.3.1	Nogo	9
1.3.2	OMgp	9
1.3.3	MAG	9
1.3.4	The Nogo-66 Receptor, NgR1, (RTN4R), and Related Molecules	10
1.3.5	Co-Receptors: LINGO-1, p75 and TROY (TAJ)	10
1.3.6	Signal Transduction from Myelin-Derived Inhibitory Molecules	11
1.3.7	The Role of Nogo-A in Axonal Regeneration in the Spinal Cord	11
1.3.7.1	Variations in the Extent of Axonal Regeneration in Different Strains of Nogo Knockout Mice	11
1.3.7.2	Effects of Antibodies Against Nogo on Axonal Regeneration in Spinal Cord	13
1.3.7.3	Neuronal Nogo-A	16

1.3.8	The Role of NgR1, NgR2 and Their Co-Receptors in Axonal Regeneration Within the Spinal Cord	17
1.3.8.1	The Distribution of NgR1 and NgR2 Does Not Suggest a General Regeneration-Inhibitory Function in the CNS	17
1.3.8.2	Knockout Mice Do Not Provide a Clear Picture of the Role of NgR1 in Regeneration	18
1.3.8.3	Pharmacological Blockade of NgR1 Enhances Axonal Sprouting and Regeneration	19
1.3.8.4	The Pattern of Expression of LINGO-1 and p75 Does Not Suggest a General Role in Inhibiting Regeneration <i>in Vivo</i>	19
1.3.8.5	LINGO-1, p75 and TROY Have Important Roles in Neurite Outgrowth <i>in Vitro</i> , But Their Significance for Axonal Regeneration <i>in Vivo</i> Has Not Yet Been Established	20
1.3.9	Effects of MAG and OMgp on Axon Regeneration in the Mammalian CNS	22
1.3.10	Strong Evidence That Myelin Proteins Are Not Always Effective Inhibitors of Axonal Regeneration <i>in Vivo</i>	22
1.4	Inhibitors at the Lesion Site	23
1.4.1	CSPGs	23
1.4.1.2	Relationship Between the Distribution of CSPGs and Failure of Axonal Regeneration	25
1.4.1.3	Chondroitinase ABC and Axonal Regeneration	25
1.4.1.4	Scar-Reducing and Growth-Promoting Effects of Decorin	27
1.4.2	Axonal Guidance Molecules Are Present in the Spinal Cord and Their Receptors Are Expressed by Specific Classes of Neuron	27
1.4.2.1	Semaphorins	27
1.4.2.2	Ephrins	28
1.4.2.3	Slits and Netrins in the Mammalian Spinal Cord	31
1.5	The Most Consistent Effects of Interfering with Inhibitory Molecules or Their Signaling Are on Raphespinal Axons	32
1.6	Interfering with Downstream Effectors of Inhibitory Signaling	32
1.6.1	Cyclic AMP Can Modulate the Responses of Neurons to Inhibitory Molecules <i>in Vitro</i> But is Only a Weak Promoter of Axonal Regeneration in the Spinal Cord	32
1.6.2	Rho-A Inhibition	33
1.6.3	Interfering with Other Targets on Signaling Pathways	34
1.7	Inhibitory Molecules and the Control of Neuronal Growth-Associated Genes	34
1.8	Conclusions	36
	<i>References</i>	37

<b>2</b>	<b>Intrinsic Factors Contributing to Axon Regeneration in the Mammalian Nervous System</b>	<b>51</b>
	<i>Ferdinando Rossi</i>	
2.1	Introduction	51
2.2	Modes of Axon Growth	52
2.3	Developmental Regulation of the Intrinsic Neuronal Growth Properties	54
2.3.1	Purely Intrinsic Mechanisms	54
2.3.2	Target-Derived Factors	55
2.3.3	Factors Acting Along the Axon	55
2.3.4	Factors Acting on the Cell Body	56
2.4	Injury-Derived Regulation of Intrinsic Neuronal Growth Properties	57
2.4.1	Negative Regulation by Injury-Associated Factors	58
2.4.2	Positive Regulation by Injury-Associated Factors	58
2.5	Procedures to Enhance Intrinsic Growth Potential	59
2.5.1	Conditioning Lesions	59
2.5.2	Pharmacological Stimulation	60
2.5.3	Overexpression of Neuronal Growth Genes	60
2.6	How Does Up-Regulation of Neuronal Growth Genes Override Environmental Inhibition?	61
2.7	Growth Control and Experience-Dependent Plasticity in the CNS	63
	<i>References</i>	65
<b>3</b>	<b>Stimulating Intrinsic Growth Potential in Mammalian Neurons</b>	<b>73</b>
	<i>Bhavna Ylera and Frank Bradke</i>	
3.1	Introduction	73
3.2	Both Intrinsic and Environmental Factors Influence Axonal Growth	73
3.3	Intrinsic Growth Potential Depends on Neuronal Age	74
3.4	Signaling Pathways Involved in Influencing Intrinsic Regenerative Growth Potential	75
3.4.1	Role of cAMP in Axonal Regeneration	75
3.4.1.1	Therapeutic Strategies for CNS Repair Based on Stimulating Intrinsic Growth Potential of Neurons via the cAMP Pathway	77
3.4.2	Role of Conditioning Lesion in Axon Regeneration	80
3.4.2.1	The Conditioning Lesion Paradigm	80
3.4.3	Rho Signaling in Axon Regeneration	84
3.4.3.1	Role of PKC in Rho-Mediated Inhibition of Axon Growth	85
3.5	Identification of Genes and Proteins Involved in Axonal Regeneration	86
3.5.1	Genes Involved in Autodestruction and Neuroprotection	86
3.5.2	Cell Cycle Genes	87
3.5.3	Plasticity Genes	87
3.5.4	Spatiotemporal Alteration of Genes Involved in Cholesterol Metabolism, Apoptosis, Cell Cycle, and Inflammation	89

3.5.5	Late Changes in Gene Expression	90
3.6	Specific Proteins Involved in Axonal Regeneration	90
3.6.1	SPRR1A	90
3.6.2	Fibroblast Growth Factor-Inducible-14	90
3.6.3	GAP-43 and CAP-23	91
3.6.4	$\alpha 7 \beta 1$ Integrin	91
3.6.5	Retinoic Acid Receptor	92
3.7	Conclusions and Outlook	92
	<i>References</i>	93
<b>4</b>	<b>Cellular Grafting Strategies to Enhance Regeneration in the Mammalian Spinal Cord</b>	<b>99</b>
	<i>Richard L. Benton, and Scott R. Whittemore</i>	
4.1	Introduction	99
4.2	CNS and Peripheral Nervous System (PNS) Tissue Transplantation Into the Injured Spinal Cord	100
4.3	Engineered PNS Tissue and Schwann Cell Transplantation in the Injured Spinal Cord	105
4.4	Adult/Postnatal and Fetal-Derived CNS Precursor/Sustentacular Cell Transplant-Mediated Regeneration in the Mammalian Spinal Cord	108
4.5	Non-CNS/PNS Cellular Grafting to Facilitate Host Axonal Regeneration	113
4.6	Summary and Perspective	116
	<i>References</i>	118
<b>II</b>	<b>Mammalian and Non-Mammalian Models of Spinal Function</b>	<b>127</b>
<b>5</b>	<b>Spinal Motor Functions in Lamprey</b>	<b>129</b>
	<i>Sten Grillner and Peter Wallén</i>	
5.1	Introduction	129
5.2	The Lamprey Model	129
5.3	Segmental Network: Basic Features	130
5.4	Cellular Properties of Importance for Operation of the Segmental Network	132
5.5	Modulator Systems: Action on Ion Channels Manifested on the Network-Behavioral Level	133
5.6	Segmental Network Modeling	136
5.7	Intersegmental Coordination: Biology and Mathematical Modeling	138
5.8	Movement-Related Feedback has Powerful Effects on the CPG	141
5.9	Comments on Sensory Coordination Across Complete Spinal Lesions: Lessons Learned from the Spinal Eel	142
5.10	Concluding Remarks	144

**6 Genetic Approaches to Spinal Locomotor Function in Mammals 147***Anna Vallstedt and Klas Kullander*

- 6.1 Introduction 147
- 6.1.1 The Spinal Cord Central Pattern Generator 147
- 6.1.2 Dissecting a Neuronal Network 149
- 6.2 Development of Spinal Cord Neurons 150
- 6.2.1 Origin of Ventral Spinal Cord Neurons 150
- 6.2.2 Function of Early Neuronal Classes 155
- 6.2.3 Creating Functional Diversity 156
- 6.3 Spinal Cord Neurons Involved in Locomotor Function 157
- 6.3.1 Location of the CPG 159
- 6.3.2 Motor Neurons 159
- 6.3.3 The Renshaw Cell 160
- 6.3.4 Interneurons Involved in Spinal Reflex Pathways 161
- 6.3.5 Excitatory Interneurons 162
- 6.3.6 Commissural Interneurons 163
- 6.4 Circuit Formation 164
- 6.4.1 Axon Guidance Molecules and Function of Neuronal Circuits 164
- 6.4.2 Neurotransmitter Phenotype During CPG Development 165
- 6.5 Emerging Technologies 167
- 6.5.1 Genetic Markers 167
- 6.5.2 Gene-Expression Initiatives 167
- 6.5.3 Creating Transgenics 169
- 6.5.4 The Combination of Cre-Expressing and Reporter Mice 172
- 6.5.5 The Principle of Reporter Mice 172
- 6.5.6 Visualization of Neurons 173
- 6.5.7 Visualization of Neuronal Connectivity 174
- 6.5.8 Visualization of Neuronal Activity 174
- 6.5.9 *In-Vivo* Imaging of Neuronal Populations 176
- 6.5.10 Functional Studies by Destruction of Neurons 176
- 6.5.11 Functional Studies Through Silencing of Neurotransmission 177
- 6.5.12 Functional Studies Through Activation of Neurons 178
- 6.6 Future Directions 179
- References 180*

**7 Comparative Analysis of Descending Supraspinal Projections in Amphibians 187***Agustín González and Hans J. ten Donkelaar*

- 7.1 Introduction 187
- 7.2 The Pattern of Descending Pathways to the Spinal Cord in Amphibians 190
- 7.2.1 Anurans 190
- 7.2.2 Urodeles 194

7.2.3	Gymnophionans	196
7.2.4	Comparative Aspects of Brainstem-Spinal Descending Pathways	197
7.3	Development of Descending Pathways to the Spinal Cord in <i>X. laevis</i>	201
7.4	Chemically Characterized Descending Pathways	206
7.4.1	Catecholaminergic Pathways	206
7.4.2	Serotonergic Pathways	210
7.4.3	Cholinergic Pathways	210
7.4.4	Nitroergic Pathways	211
7.4.5	Calbindin-D28k/Calretinin-Containing Pathways	212
7.5	Regeneration of Descending Supraspinal Pathways in Amphibians	214
	<i>References</i>	217

### III Non-Mammalian Models of Spinal Cord Regeneration 227

#### 8 Regeneration in the Lamprey Spinal Cord 229

*Michael I. Shifman, Li-Qing Jin, and Michael E. Selzer*

8.1	Introduction	229
8.1.1	General Biology	229
8.1.2	Evolutionary Importance	231
8.1.3	Uses in Neuroscience Research	232
8.1.3.1	Neuroanatomy	232
8.1.3.2	Synaptic Transmission in the CNS	234
8.1.3.3	Pattern Generation	234
8.2	Axonal Regeneration	235
8.2.1	Background: Early Anatomic and Physiologic Studies	235
8.2.2	Demonstration of Functional Axon Regeneration	235
8.2.2.1	NIH Criteria	235
8.2.2.2	Evidence That the Experimental Lesion Disconnects Nerve Fibers	236
8.2.2.3	Anatomic Evidence That Regenerated Axons Bridge the Lesion and Make Junctional Contacts	236
8.2.2.4	Evidence That Regenerated Fibers Elicit Postjunctional Responses	237
8.2.2.5	Evidence That Changes in Function Derive from Regenerated Connections	237
8.2.3	Specificity of Regeneration	238
8.2.4	Heterogeneity of Axon Regenerative Ability	239
8.2.5	Intraneuronal Mechanisms of Axon Regeneration	240
8.2.5.1	Cytoskeletal Changes During Axon Retraction	240
8.2.5.2	Cytoskeletal Changes During Regeneration	242
8.2.6	Role of Axon-Guidance Molecules in Axon Regeneration in the Spinal Cord	248
8.2.6.1	Cloning and Sequencing of Axonal-Guidance Molecules from Lamprey CNS	249

8.2.6.2	Effect of Spinal Transection on Expression of Netrin and its Receptors	249
8.2.6.3	Expression Patterns of Semaphorins and Their Receptors	250
8.2.6.4	Effect of Spinal Cord Transection on Semaphorin Expression	251
8.2.6.5	Evidence from Other Species for Involvement of Guidance Molecules in Axon Regeneration	252
8.2.6.6	Possible Mechanisms of Involvement of Guidance Molecules in Regeneration	253
8.3	Conclusions: Where Lampreys Fit Into the Study of Regeneration	253

#### **IV Non-Mammalian Models of Visual System Regeneration 321**

##### **11 Functional Aspects of Optic Nerve Regeneration in Non-Mammalian Vertebrates 323**

*Sarah A. Dunlop*

Overview 323

11.1	Why the Visual System as a Model for CNS Regeneration?	323
11.1.1	The Four Prerequisites for Visual System Repair	324
11.1.2	Procedural and Innate Species Variations	325
11.1.3	Evolutionary Hierarchy of Optic Nerve Regeneration	325
11.2	Early Behavioral Studies	332
11.2.1	Behavioral Parameters	332
11.3	Making a Topographic Map: A Biphasic Process	334
11.3.1	Molecular Guidance Cues and Restoration of Topography	336
11.3.2	Neurogenesis and the Restoration of Topography	338
11.3.3	Spontaneous Activity and the Restoration of Topography	339
11.3.4	Changing the Balance of Excitation and Inhibition and Restoration of Topography	340
11.3.5	Modulating Neural Activity to Influence Topography	344
11.4	Conclusions	345
	<i>References</i>	346

##### **12 Optic Nerve Regeneration in Goldfish 355**

*Satoru Kato, Yoshiki Koriyama, Toru Matsukawa, and Kayo Sugitani*

12.1	Introduction	355
12.2	The Time Course of Optic Nerve Regeneration in Goldfish	356
12.2.1	Morphological Changes in RGCs and Their Axon Terminals During Optic Nerve Regeneration	356
12.2.2	A Computer Image Processing System to Quantify Goldfish Behavior	358

12.3	Time-Specific Molecular Expressions During Optic Nerve Regeneration in Goldfish	360
12.3.1	Purpurin: A Retinol-Binding Protein in the Retina During the Early Stage of Optic Nerve Regeneration	361
12.3.2	Molecular Involvement of Na,K-ATPase in the Retina During Axonal Regeneration in Goldfish	364
12.3.3	Retinal Transglutaminase (TG <sub>R</sub> ) During Axonal Regeneration in Goldfish	365
12.3.4	Up-Regulation of a Molecule in the Optic Tectum During the Late Stage of Optic Nerve Regeneration	366
12.4	Applications of Fish-Derived Regeneration-Associated Molecules to Promote Regrowth of Mammalian Optic Axons	367
12.5	Summary	369
	<i>References</i>	370
<b>13</b>	<b>Gene Regulation During Axon and Tissue Regeneration in the Retina of Zebrafish</b>	<b>373</b>
	<i>Marie-Claude Senut, Blake Fausett, Matthew Veldman, and Daniel Goldman</i>	
13.1	Introduction	373
13.2	The Zebrafish Retina	374
13.3	Retina Injury	376
13.3.1	Experimental Models of Retinal Injury	376
13.3.2	Gene Regulation in the Injured Zebrafish Retina	376
13.3.2.1	Phase 1: Programmed Cell Death (Apoptosis) and Immune Response	377
13.3.2.2	Phase 2: Stem Cell Activation and Proliferation	377
13.3.2.3	Phase 3: Cellular Migration and Differentiation	378
13.3.3	Approaches to Identifying Transcriptional Regulators in the Injured Retina: The Example of $\alpha$ 1-Tubulin	379
13.4	Optic Nerve Regeneration	381
13.4.1	Experimental Models of Optic Nerve Regeneration	381
13.4.2	Gene Regulation Following Optic Nerve Lesion	381
13.4.2.1	Environmental Factors Influencing Fish Optic Nerve Regeneration	381
13.4.2.2	Intrinsic Mechanisms of Optic Nerve Regeneration	382
13.4.3	Approaches to Identifying Transcriptional Regulators of Optic Nerve Regeneration in Zebrafish: The Example of $\alpha$ 1-Tubulin	383
13.5	Genetic Strategies for Retinal Regeneration: Perspectives and Challenges	387
13.6	Concluding Remarks	389
