Preface	xi
I Introduction	xv
I.1 Bandwidth Defined	xv
I.2 Historic Overview	xvi
I.2.1 Electroacoustic Transducers	xvi
I.2.2 Sound Quality	xvii
I.3 Bandwidth Extension Framework	xviii
I.3.1 Introduction	xviii
I.3.2 The Framework	xx
1 From Physics to Psychophysics	1
1.1 Signal Theory	1
1.1.1 Linear and Non-linear Systems	1
1.1.2 Continuous-time LTI (LTC) Systems	2
1.1.3 Discrete-time LTI (LTD) Systems	4
1.1.4 Other Properties of LTI Systems	5
1.1.5 Digital Filters	5
1.2 Statistics of Audio Signals	7
1.2.1 Speech	7
1.2.2 Music	13
1.3 Loudspeakers	13
1.3.1 Introduction to Acoustics	13
1.3.2 Loudspeakers	16
1.3.3 Bessel and Struve Functions	24
1.4 Auditory Perception	29
1.4.1 Physical Characteristics of the Peripheral Hearing System	29
1.4.2 Non-linearity of the Basilar Membrane Response	32
1.4.3 Frequency Selectivity and Auditory Filters	33
1.4.4 Loudness and Masking	34

1.4.5	Pitch	42
1.4.6	Timbre	46
1.4.7	Auditory Scene Analysis	48
1.4.8	Perceptual Modelling – Auditory Image Model	49
2	Psychoacoustic Bandwidth Extension for Low Frequencies	53
2.1	Introduction	53
2.2	Psychoacoustic Effects for Low-frequency Enhancement of Small Loudspeaker Reproduction	55
2.2.1	Pitch (Harmonic Structure)	55
2.2.2	Timbre (Spectral Envelope)	57
2.2.3	Loudness (Amplitude) and Tone Duration	57
2.3	Low-Frequency Psychoacoustic Bandwidth Extension Algorithms	60
2.3.1	Overview	60
2.3.2	Non-Linear Device	61
2.3.3	Filtering	81
2.3.4	Gain of Harmonics Signal	86
2.4	Low-Frequency Psychoacoustic Bandwidth Extension with Frequency Tracking	89
2.4.1	Non-Linear Device	89
2.4.2	Frequency Tracking	91
2.5	Subjective Performance of Low-Frequency Psychoacoustic Bandwidth Extension Algorithms	97
2.5.1	‘Virtual Bass’	97
2.5.2	‘Ultra Bass’	98
2.6	Spectral Characteristics of Non-Linear Devices	103
2.6.1	Output Spectrum of a Rectifier	105
2.6.2	Output Spectrum of Integrator	107
2.6.3	Output Spectra in Discrete Time	109
2.6.4	Output Spectrum of Clipper	112
3	Low-frequency Physical Bandwidth Extension	117
3.1	Introduction	117
3.2	Perceptual Considerations	117
3.2.1	Pitch (Spectral Fine Structure)	118
3.2.2	Timbre (Spectral Envelope)	118
3.2.3	Loudness (Amplitude)	119
3.3	Low-frequency Physical Bandwidth Extension Algorithms	119
3.3.1	Systems with Low-frequency Extension	120
3.3.2	Non-linear Device	121
3.3.3	Filtering	124
3.3.4	Gain of Harmonics Signal	125

3.4	Low-frequency Physical Bandwidth Extension Combined with Low-frequency Psychoacoustic Bandwidth Extension	126
4	Special Loudspeaker Drivers for Low-frequency Bandwidth Extension	129
4.1	The Force Factor	129
4.2	High Force Factor Drivers	132
4.3	Low Force Factor Drivers	134
4.3.1	Optimal Force Factor	134
4.4	Transient Response	138
4.4.1	Gated Sinusoid Response	138
4.4.2	Impulse Response	140
4.5	Details of Lumped-element Parameters and Efficiency	143
4.6	Discussion	144
5	High-frequency Bandwidth Extension for Audio	145
5.1	Introduction	145
5.2	The Limits of Deconvolution	147
5.3	Perceptual Considerations	149
5.3.1	Pitch (Harmonic Structure)	149
5.3.2	Timbre (Spectral Envelope)	151
5.3.3	Loudness (Amplitude)	152
5.3.4	Effects of Hearing Loss	153
5.3.5	Conclusions	153
5.4	High-frequency Bandwidth Extension for Audio	154
5.4.1	Non-linear Device	154
5.4.2	Filtering	155
5.4.3	Gain of Harmonics Signal	158
5.5	Spectral Band Replication (SBR)	159
5.6	High-frequency Bandwidth Extension by Instantaneous Compression	162
5.6.1	Introduction and Algorithm	162
5.6.2	Analysis of Harmonics Generation	163
5.6.3	Implementation	165
5.6.4	Examples	166
5.6.5	Approximation of the Function $\tanh(Z)$	168
6	Bandwidth Extension for Speech	171
6.1	Applications	174
6.2	From a Speech Production Model to the Bandwidth Extension Algorithm	176
6.2.1	Model of the Process of Speech Production	177
6.2.2	Bandwidth Extension Algorithm	179
6.2.3	Alternative Structures	182
6.3	Extension of the Excitation Signal	184

6.3.1	Explicit Signal Generation	185
6.3.2	Non-linear Processing	187
6.3.3	Modulation in the Time Domain	188
6.3.4	Pitch Scaling	193
6.3.5	Discussion	195
6.4	Estimation of the Wideband Spectral Envelope	196
6.4.1	Representations of the Estimated Spectral Envelope	198
6.4.2	Instrumental Performance Measure	200
6.4.3	Theoretical Performance Bound	205
6.5	Feature Selection	207
6.5.1	Mutual Information	208
6.5.2	Separability	209
6.5.3	Linear Discriminant Analysis	210
6.5.4	Primary Features	211
6.5.5	Evaluation	215
6.6	Codebook Mapping	217
6.6.1	Vector Quantization and Training of the Primary Codebook	218
6.6.2	Training of the Shadow Codebook	219
6.7	Linear Mapping	219
6.7.1	Training Procedure	220
6.7.2	Piecewise-linear Mapping	221
6.8	Gaussian Mixture Model	222
6.8.1	Minimum Mean Square Error Estimation	223
6.8.2	Training by the Expectation-maximization Algorithm	225
6.9	Hidden Markov Model	226
6.9.1	Statistical Model of the Markov States	227
6.9.2	Estimation Rules	230
6.10	Discussion	235
7	Noise Abatement	237
7.1	A Special Kind of Noise Reduction	237
7.2	The Noise Pollution Problem – Case Study	237
7.3	The Application Low-frequency Psychoacoustic Bandwidth Extension to Noise Pollution	239
8	Bandwidth Extension Patent Overview	243
Appendix A	Multidimensional Scaling	261
A.1	Introduction	261
A.2	Scaling	261
A.3	Example	262
A.4	Procedure	264
A.5	Precautions Concerning the Solution	264

A.6	Significance of Stress	265
A.7	Univariate Scaling	265
