

Contents at a Glance

<i>Introduction</i>	1
<i>Part I: Stalking the Cosmos</i>	7
Chapter 1: Seeing the Light: The Art and Science of Astronomy	9
Chapter 2: Join the Crowd: Skywatching Activities and Resources	29
Chapter 3: The Way You Watch Tonight: Terrific Tools for Observing the Skies	41
Chapter 4: Just Passing Through: Meteors, Comets, and Artificial Satellites	57
<i>Part II: Going Once Around the Solar System</i>	75
Chapter 5: A Matched Pair: Earth and Its Moon	77
Chapter 6: Earth's Near Neighbors: Mercury, Venus, and Mars	97
Chapter 7: Rock On: The Asteroid Belt and Near-Earth Objects	115
Chapter 8: Great Balls of Gas: Jupiter and Saturn	123
Chapter 9: Far Out! Uranus, Neptune, Pluto, and Beyond	135
<i>Part III: Meeting Old Sol and Other Stars</i>	143
Chapter 10: The Sun: Star of the Earth	145
Chapter 11: Taking a Trip to the Stars	169
Chapter 12: Galaxies: The Milky Way and Beyond	197
Chapter 13: Digging into Black Holes and Quasars	219
<i>Part IV: Pondering the Remarkable Universe</i>	231
Chapter 14: Is Anybody Out There? SETI and Planets of Other Suns	233
Chapter 15: Delving into Dark Matter and Antimatter	245
Chapter 16: The Big Bang and the Evolution of the Universe	253
<i>Part V: The Part of Tens</i>	263
Chapter 17: Ten Strange Facts about Astronomy and Space	265
Chapter 18: Ten Common Errors about Astronomy and Space	269
<i>Part VI: Appendixes</i>	273
Appendix A: Finding the Planets: 2006 to 2010	275
Appendix B: Star Maps	293
Appendix C: Glossary	301
<i>Index</i>	305

***Introduction*..... 1**

About This Book	2
Conventions Used in This Book	2
What You're Not to Read	2
Foolish Assumptions	3
How This Book Is Organized	3
Part I: Stalking the Cosmos	3
Part II: Going Once Around the Solar System	4
Part III: Meeting Old Sol and Other Stars	4
Part IV: Pondering the Remarkable Universe	4
Part V: The Part of Tens	4
Part VI: Appendixes	5
Icons Used in This Book	5
Where to Go from Here	5

***Part 1: Stalking the Cosmos* 7**

Chapter 1: Seeing the Light: The Art and Science of Astronomy 9

Astronomy: The Science of Observation	10
Understanding What You See: The Language of Light	11
They wondered as they wandered: Planets versus stars	12
If you see a Great Bear, start worrying: Naming stars and constellations	12
What do I spy? The Messier Catalog and other sky objects	20
The smaller, the brighter: Getting to the root of magnitudes	20
Looking back on light-years	22
Keep on moving: Figuring the positions of the stars	23
Gravity: A Force to Be Reckoned With	26
Space: A Commotion of Motion	27

Chapter 2: Join the Crowd: Skywatching Activities and Resources 29

You're Not Alone: Astronomy Clubs, Web Sites, and More	30
Joining an astronomy club for star-studded company	30
Checking Web sites, magazines, and software	31
Visiting Observatories and Planetariums	34
Ogling the observatories	34
Popping in on planetariums	36

Vacationing with the Stars: Star Parties, Eclipse Trips, and Telescope Motels	36
Party on! Attending star parties	37
To the path of totality: Taking eclipse cruises and tours	38
Motoring to telescope motels	40

**Chapter 3: The Way You Watch Tonight: Terrific Tools
for Observing the Skies41**

Seeing Stars: A Sky Geography Primer	42
As the earth turns	42
. . . keep an eye on the North Star	43
Beginning with Naked-Eye Observation	45
Using Binoculars or a Telescope for a Better View	48
Binoculars: Sweeping the night sky	48
Telescopes: When closeness counts	50
Planning Out Your Dip into Astronomy	56

**Chapter 4: Just Passing Through: Meteors, Comets,
and Artificial Satellites57**

Meteors: Wishing on a Shooting Star	57
Spotting sporadic meteors, fireballs, and bolides	59
Watching a radiant sight: Meteor showers	61
Comets: The Lowdown on Dirty Ice Balls	65
Making heads and tails of a comet's structure	65
Waiting for the "comets of the century"	68
Hunting for the great comet	70
Artificial Satellites: Enduring a Love-Hate Relationship	72
Skywatching for artificial satellites	73
Finding satellite viewing predictions	74

Part II: Going Once Around the Solar System75

Chapter 5: A Matched Pair: Earth and Its Moon77

Putting Earth Under the Astronomical Microscope	78
One of a kind: Earth's unique characteristics	78
Spheres of influence: Earth's distinct regions	80
Examining Earth's Time, Seasons, and Age	82
Orbiting for all time	82
Tilting toward the seasons	84
Estimating Earth's age	86
Making Sense of the Moon	87
Get ready to howl: Phases of the moon	87
In the shadows: Watching lunar eclipses	89
Hard rock: Viewing the moon's geology	90
Quite an impact: A theory about the moon's origin	94

Chapter 6: Earth’s Near Neighbors: Mercury, Venus, and Mars97

Hot, Shrunk, and Battered: Putting Mercury on a Platter97
 Dry, Acidic, and Hilly: Steering Clear of Venus99
 Red, Cold, and Barren: Uncovering the Mysteries of Mars100
 Where has all the water gone?101
 Does Mars support life?102
 Differentiating Earth through Comparative Planetology103
 Observing the Terrestrial Planets with Ease104
 Understanding elongation, opposition, and conjunction106
 Viewing Venus and its phases108
 Watching Mars as it loops around110
 Outdoing Copernicus by observing Mercury113

Chapter 7: Rock On: The Asteroid Belt and Near-Earth Objects115

Taking a Brief Tour of the Asteroid Belt115
 Understanding the Threat That Near-Earth Objects Pose118
 When push comes to shove: Nudging an asteroid119
 Forewarned is forearmed: Surveying NEOs to protect Earth119
 Searching for Small Points of Light120
 Timing an asteroidal occultation121
 Helping to track an occultation122

Chapter 8: Great Balls of Gas: Jupiter and Saturn123

The Pressure’s On: Journeying Inside Jupiter and Saturn123
 Almost a Star: Gazing at Jupiter124
 Scanning for the Great Red Spot126
 Shooting for Galileo’s moons127
 Our Main Planetary Attraction: Setting Your Sights on Saturn130
 Ringing around the planet130
 Stormchasing across Saturn132
 Monitoring a moon of major proportions132

Chapter 9: Far Out! Uranus, Neptune, Pluto, and Beyond135

Breaking the Ice with Uranus and Neptune135
 Bull’s-eye! Tilted Uranus and its features136
 Against the grain: Neptune and its moon137
 Meeting Pluto, an Unusual Planet137
 The moon chip doesn’t float far from the planet138
 The little planet with little respect139
 Buckling Down to the Kuiper Belt139
 Viewing the Outer Planets140
 Sighting Uranus141
 Distinguishing Neptune from a star141
 Straining to see Pluto142

Part III: Meeting Old Sol and Other Stars 143**Chapter 10: The Sun: Star of the Earth 145**

Surveying the Sunscape	146
The sun's size and shape: A great bundle of gas	147
The sun's regions: Caught between the core and the corona	147
Solar activity: What's going on out there?	149
Solar wind: Playing with magnets	153
Solar CSI: The mystery of the missing solar neutrinos	153
Four billion and counting: The life expectancy of the sun	154
Don't Make a Blinding Mistake: Safe Techniques for Solar Viewing	155
Viewing the sun by projection	156
Viewing the sun through front-end filters	159
Fun with the Sun: Solar Observation	160
Tracking sunspots	160
Experiencing solar eclipses	162
Looking at solar pictures on the Net	167

Chapter 11: Taking a Trip to the Stars 169

Life Cycles of the Hot and Massive	169
Young stellar objects: Taking baby steps	171
Main sequence stars: A long adulthood	172
Red giants: Burning out the golden years	172
Closing time: Stars at the tail end of stellar evolution	173
Diagramming Star Color, Brightness, and Mass	178
Spectral types: What color is my star?	178
Star light, star bright: Classifying luminosity	180
The brighter they burn, the bigger they swell: Mass determines class	181
Interpreting the H-R diagram	182
Eternal Partners: Binary and Multiple Stars	183
Binary stars and the Doppler Effect	183
Two stars are binary, but three's a crowd: Multiple stars	187
Change Is Good: Variable Stars	187
Going the distance: Pulsating stars	188
Explosive neighbors: Flare stars	190
Nice to nova: Exploding stars	190
Stellar hide and seek: Eclipsing binary stars	192
Hogging the starlight: Microlensing events	193
Meeting Your Stellar Neighbors	193
Helping Scientists by Observing the Stars	195

Chapter 12: Galaxies: The Milky Way and Beyond 197

Unwrapping the Milky Way	197
How and when did the Milky Way form?	198
What shape is the Milky Way?	199
Where can you find the Milky Way?	200

Star Clusters: Galactic Associates201
 A loose fit: Open clusters202
 A tight squeeze: Globular clusters203
 Fun while it lasted: OB associations205
 Taking a Shine to Nebulae205
 Picking out planetary nebulae206
 Breezing through supernova remnants208
 Enjoying Earth’s best nebular views208
 Getting a Grip on Galaxies211
 Surveying spiral, barred spiral, and lenticular galaxies211
 Examining elliptical galaxies212
 Looking at irregular, dwarf, and low surface brightness
 galaxies213
 Gawking at great galaxies214
 Discovering the Local Group of Galaxies216
 Checking out clusters of galaxies217
 Sizing up superclusters, cosmic voids, and Great Walls218

Chapter 13: Digging into Black Holes and Quasars 219

Black Holes: There Goes the Neighborhood219
 Looking over the black-hole roster220
 Poking around the black-hole interior220
 Surveying a black hole’s surroundings223
 Warping space and time224
 Quasars: Defying Definitions225
 Measuring the size of a quasar226
 Getting up to speed on jets226
 Exploring quasar spectra226
 Active Galactic Nuclei: Welcome to the Quasar Family227
 Sifting through different types of AGN227
 Examining the power behind AGN229
 Proposing the Unified Model of AGN230

Part IV: Pondering the Remarkable Universe231

**Chapter 14: Is Anybody Out There? SETI and Planets
 of Other Suns 233**

Using Drake’s Equation to Discuss SETI234
 SETI Projects: Listening for E.T.235
 The flight of Project Phoenix237
 Space scanning with other SETI projects238
 SETI programs want you!240
 Finding Extrasolar Planets240
 51 Pegasi’s hot partner242
 The Upsilon Andromedae system243
 Continuing the search for planets suitable for life243

Chapter 15: Delving into Dark Matter and Antimatter245

Dark Matter: Understanding the Universal Glue	245
Gathering the evidence for dark matter	246
Debating the makeup of dark matter	248
Taking a Shot in the Dark: Searching for Dark Matter	249
WIMPs: Leaving a weak mark	249
MACHOs: Making a brighter image	250
Mapping dark matter with gravitational lensing	250
Dueling Antimatter: Proving That Opposites Attract	251

Chapter 16: The Big Bang and the Evolution of the Universe253

Assessing Evidence for the Big Bang	254
Inflation: A Swell Time in the Universe	255
Something from nothing: Inflation and the vacuum	256
Falling flat: Inflation and the shape of the universe	257
Dark Energy: Stepping on the Universal Accelerator	258
Pulling Universal Info from the Cosmic Microwave Background	258
Finding the lumps in the cosmic microwave background	259
Mapping the universe with the cosmic microwave background	260
In a Galaxy Far Away: The Hubble Constant and Standard Candles	260
The Hubble constant: How fast do galaxies really move?	261
Standard candles: How do scientists measure galaxy distances?	262

Part V: The Part of Tens263**Chapter 17: Ten Strange Facts about Astronomy and Space265**

You Have Tiny Meteorites in Your Hair	265
A Comet's Tail Often Leads the Way	265
Earth Is Made of Rare and Unusual Matter	266
High Tide Comes on Both Sides of the Earth at the Same Time	266
On Venus, the Rain Never Falls on the Plain	266
Rocks from Mars Dot the Earth	266
Pluto Was Discovered from the Predictions of a False Theory	267
Sunspots Are Not Dark	267
A Star in Plain View May Have Exploded, but No One Knows	267
You May Have Seen the Big Bang on an Old Television	268

Chapter 18: Ten Common Errors about Astronomy and Space269

“The Light from That Star Took 1,000 Light-Years to Reach Earth”	269
A Freshly Fallen Meteorite Is Still Hot	269
Summer Always Comes When Earth Is Closest to the Sun	270

The “Morning Star” Is a Star270
 If You Vacation in the Asteroid Belt, You’ll See Asteroids
 All Around You270
 Nuking a “Killer Asteroid” on a Collision Course for Earth Will
 Save Us270
 Asteroids Are Round, Like Little Planets271
 The Sun Is an Average Star271
 The Hubble Telescope Gets Up Close and Personal271
 The Big Bang Is Dead271

Part VI: Appendixes273

Appendix A: Finding the Planets: 2006 to 2010275

2006276
 2007279
 2008282
 2009285
 2010288

Appendix B: Star Maps293

Appendix C: Glossary301

Index305
