Preface to the first edition	xiii
Preface to the second edition	xvii
1 Differential and Difference Equations	1
10 Differential Equation Problems	1
100 <i>Introduction to differential equations</i>	1
101 <i>The Kepler problem</i>	4
102 <i>A problem arising from the method of lines</i>	7
103 <i>The simple pendulum</i>	10
104 <i>A chemical kinetics problem</i>	14
105 <i>The Van der Pol equation and limit cycles</i>	16
106 <i>The Lotka–Volterra problem and periodic orbits</i>	18
107 <i>The Euler equations of rigid body rotation</i>	20
11 Differential Equation Theory	22
110 <i>Existence and uniqueness of solutions</i>	22
111 <i>Linear systems of differential equations</i>	24
112 <i>Stiff differential equations</i>	26
12 Further Evolutionary Problems	28
120 <i>Many-body gravitational problems</i>	28
121 <i>Delay problems and discontinuous solutions</i>	31
122 <i>Problems evolving on a sphere</i>	32
123 <i>Further Hamiltonian problems</i>	34
124 <i>Further differential-algebraic problems</i>	36
13 Difference Equation Problems	38
130 <i>Introduction to difference equations</i>	38
131 <i>A linear problem</i>	38
132 <i>The Fibonacci difference equation</i>	40
133 <i>Three quadratic problems</i>	40
134 <i>Iterative solutions of a polynomial equation</i>	41
135 <i>The arithmetic-geometric mean</i>	43

14	Difference Equation Theory	44
	140 <i>Linear difference equations</i>	44
	141 <i>Constant coefficients</i>	45
	142 <i>Powers of matrices</i>	46
2	Numerical Differential Equation Methods	51
20	The Euler Method	51
	200 <i>Introduction to the Euler methods</i>	51
	201 <i>Some numerical experiments</i>	54
	202 <i>Calculations with stepsize control</i>	58
	203 <i>Calculations with mildly stiff problems</i>	60
	204 <i>Calculations with the implicit Euler method</i>	63
21	Analysis of the Euler Method	65
	210 <i>Formulation of the Euler method</i>	65
	211 <i>Local truncation error</i>	66
	212 <i>Global truncation error</i>	66
	213 <i>Convergence of the Euler method</i>	68
	214 <i>Order of convergence</i>	69
	215 <i>Asymptotic error formula</i>	72
	216 <i>Stability characteristics</i>	74
	217 <i>Local truncation error estimation</i>	79
	218 <i>Rounding error</i>	80
22	Generalizations of the Euler Method	85
	220 <i>Introduction</i>	85
	221 <i>More computations in a step</i>	86
	222 <i>Greater dependence on previous values</i>	87
	223 <i>Use of higher derivatives</i>	88
	224 <i>Multistep–multistage–multiderivative methods</i>	90
	225 <i>Implicit methods</i>	91
	226 <i>Local error estimates</i>	91
23	Runge–Kutta Methods	93
	230 <i>Historical introduction</i>	93
	231 <i>Second order methods</i>	93
	232 <i>The coefficient tableau</i>	94
	233 <i>Third order methods</i>	95
	234 <i>Introduction to order conditions</i>	95
	235 <i>Fourth order methods</i>	98
	236 <i>Higher orders</i>	99
	237 <i>Implicit Runge–Kutta methods</i>	99
	238 <i>Stability characteristics</i>	100
	239 <i>Numerical examples</i>	103

24	Linear Multistep Methods	105
240	<i>Historical introduction</i>	105
241	<i>Adams methods</i>	105
242	<i>General form of linear multistep methods</i>	107
243	<i>Consistency, stability and convergence</i>	107
244	<i>Predictor–corrector Adams methods</i>	109
245	<i>The Milne device</i>	111
246	<i>Starting methods</i>	112
247	<i>Numerical examples</i>	113
25	Taylor Series Methods	114
250	<i>Introduction to Taylor series methods</i>	114
251	<i>Manipulation of power series</i>	115
252	<i>An example of a Taylor series solution</i>	116
253	<i>Other methods using higher derivatives</i>	119
254	<i>The use of f derivatives</i>	120
255	<i>Further numerical examples</i>	121
26	Hybrid Methods	122
260	<i>Historical introduction</i>	122
261	<i>Pseudo Runge–Kutta methods</i>	123
262	<i>Generalized linear multistep methods</i>	124
263	<i>General linear methods</i>	124
264	<i>Numerical examples</i>	127
27	Introduction to Implementation	128
270	<i>Choice of method</i>	128
271	<i>Variable stepsize</i>	130
272	<i>Interpolation</i>	131
273	<i>Experiments with the Kepler problem</i>	132
274	<i>Experiments with a discontinuous problem</i>	133
3	Runge–Kutta Methods	137
30	Preliminaries	137
300	<i>Rooted trees</i>	137
301	<i>Functions on trees</i>	139
302	<i>Some combinatorial questions</i>	141
303	<i>The use of labelled trees</i>	144
304	<i>Enumerating non-rooted trees</i>	144
305	<i>Differentiation</i>	146
306	<i>Taylor’s theorem</i>	148
31	Order Conditions	150
310	<i>Elementary differentials</i>	150
311	<i>The Taylor expansion of the exact solution</i>	153
312	<i>Elementary weights</i>	155
313	<i>The Taylor expansion of the approximate solution</i>	159
314	<i>Independence of the elementary differentials</i>	160
315	<i>Conditions for order</i>	162

316	<i>Order conditions for scalar problems</i>	162
317	<i>Independence of elementary weights</i>	163
318	<i>Local truncation error</i>	165
319	<i>Global truncation error</i>	166
32	Low Order Explicit Methods	170
320	<i>Methods of orders less than 4</i>	170
321	<i>Simplifying assumptions</i>	171
322	<i>Methods of order 4</i>	175
323	<i>New methods from old</i>	181
324	<i>Order barriers</i>	187
325	<i>Methods of order 5</i>	190
326	<i>Methods of order 6</i>	192
327	<i>Methods of orders greater than 6</i>	195
33	Runge–Kutta Methods with Error Estimates	198
330	<i>Introduction</i>	198
331	<i>Richardson error estimates</i>	198
332	<i>Methods with built-in estimates</i>	201
333	<i>A class of error-estimating methods</i>	202
334	<i>The methods of Fehlberg</i>	208
335	<i>The methods of Verner</i>	210
336	<i>The methods of Dormand and Prince</i>	211
34	Implicit Runge–Kutta Methods	213
340	<i>Introduction</i>	213
341	<i>Solvability of implicit equations</i>	214
342	<i>Methods based on Gaussian quadrature</i>	215
343	<i>Reflected methods</i>	219
344	<i>Methods based on Radau and Lobatto quadrature</i>	222
35	Stability of Implicit Runge–Kutta Methods	230
350	<i>A-stability, $A(\alpha)$-stability and L-stability</i>	230
351	<i>Criteria for A-stability</i>	230
352	<i>Padé approximations to the exponential function</i>	232
353	<i>A-stability of Gauss and related methods</i>	238
354	<i>Order stars</i>	240
355	<i>Order arrows and the Ehle barrier</i>	243
356	<i>AN-stability</i>	245
357	<i>Non-linear stability</i>	248
358	<i>BN-stability of collocation methods</i>	252
359	<i>The V and W transformations</i>	254
36	Implementable Implicit Runge–Kutta Methods	259
360	<i>Implementation of implicit Runge–Kutta methods</i>	259
361	<i>Diagonally implicit Runge–Kutta methods</i>	261
362	<i>The importance of high stage order</i>	262
363	<i>Singly implicit methods</i>	266
364	<i>Generalizations of singly implicit methods</i>	271
365	<i>Effective order and DESIRE methods</i>	273

37	Symplectic Runge–Kutta Methods	275
370	<i>Maintaining quadratic invariants</i>	275
371	<i>Examples of symplectic methods</i>	276
372	<i>Order conditions</i>	277
373	<i>Experiments with symplectic methods</i>	278
38	Algebraic Properties of Runge–Kutta Methods	280
380	<i>Motivation</i>	280
381	<i>Equivalence classes of Runge–Kutta methods</i>	281
382	<i>The group of Runge–Kutta methods</i>	284
383	<i>The Runge–Kutta group</i>	287
384	<i>A homomorphism between two groups</i>	290
385	<i>A generalization of G_1</i>	291
386	<i>Recursive formula for the product</i>	292
387	<i>Some special elements of G</i>	297
388	<i>Some subgroups and quotient groups</i>	300
389	<i>An algebraic interpretation of effective order</i>	302
39	Implementation Issues	308
390	<i>Introduction</i>	308
391	<i>Optimal sequences</i>	308
392	<i>Acceptance and rejection of steps</i>	310
393	<i>Error per step versus error per unit step</i>	311
394	<i>Control-theoretic considerations</i>	312
395	<i>Solving the implicit equations</i>	313
4	Linear Multistep Methods	317
40	Preliminaries	317
400	<i>Fundamentals</i>	317
401	<i>Starting methods</i>	318
402	<i>Convergence</i>	319
403	<i>Stability</i>	320
404	<i>Consistency</i>	320
405	<i>Necessity of conditions for convergence</i>	322
406	<i>Sufficiency of conditions for convergence</i>	324
41	The Order of Linear Multistep Methods	329
410	<i>Criteria for order</i>	329
411	<i>Derivation of methods</i>	330
412	<i>Backward difference methods</i>	332
42	Errors and Error Growth	333
420	<i>Introduction</i>	333
421	<i>Further remarks on error growth</i>	335
422	<i>The underlying one-step method</i>	337
423	<i>Weakly stable methods</i>	339
424	<i>Variable stepsize</i>	340

43	Stability Characteristics	342
430	<i>Introduction</i>	342
431	<i>Stability regions</i>	344
432	<i>Examples of the boundary locus method</i>	346
433	<i>An example of the Schur criterion</i>	349
434	<i>Stability of predictor–corrector methods</i>	349
44	Order and Stability Barriers	352
440	<i>Survey of barrier results</i>	352
441	<i>Maximum order for a convergent k-step method</i>	353
442	<i>Order stars for linear multistep methods</i>	356
443	<i>Order arrows for linear multistep methods</i>	358
45	One-Leg Methods and G-stability	360
450	<i>The one-leg counterpart to a linear multistep method</i>	360
451	<i>The concept of G-stability</i>	361
452	<i>Transformations relating one-leg and linear multistep methods</i>	364
453	<i>Effective order interpretation</i>	365
454	<i>Concluding remarks on G-stability</i>	365
46	Implementation Issues	366
460	<i>Survey of implementation considerations</i>	366
461	<i>Representation of data</i>	367
462	<i>Variable stepsize for Nordsieck methods</i>	371
463	<i>Local error estimation</i>	372
5	General Linear Methods	373
50	Representing Methods in General Linear Form	373
500	<i>Multivalued–multistage methods</i>	373
501	<i>Transformations of methods</i>	375
502	<i>Runge–Kutta methods as general linear methods</i>	376
503	<i>Linear multistep methods as general linear methods</i>	377
504	<i>Some known unconventional methods</i>	380
505	<i>Some recently discovered general linear methods</i>	382
51	Consistency, Stability and Convergence	385
510	<i>Definitions of consistency and stability</i>	385
511	<i>Covariance of methods</i>	386
512	<i>Definition of convergence</i>	387
513	<i>The necessity of stability</i>	388
514	<i>The necessity of consistency</i>	389
515	<i>Stability and consistency imply convergence</i>	390
52	The Stability of General Linear Methods	397
520	<i>Introduction</i>	397
521	<i>Methods with maximal stability order</i>	398
522	<i>Outline proof of the Butcher–Chipman conjecture</i>	402
523	<i>Non-linear stability</i>	405
524	<i>Reducible linear multistep methods and G-stability</i>	407
525	<i>G-symplectic methods</i>	408

53	The Order of General Linear Methods	410
530	<i>Possible definitions of order</i>	410
531	<i>Local and global truncation errors</i>	412
532	<i>Algebraic analysis of order</i>	413
533	<i>An example of the algebraic approach to order</i>	414
534	<i>The order of a G-symplectic method</i>	416
535	<i>The underlying one-step method</i>	417
54	Methods with Runge–Kutta stability	420
540	<i>Design criteria for general linear methods</i>	420
541	<i>The types of DIMSIM methods</i>	420
542	<i>Runge–Kutta stability</i>	423
543	<i>Almost Runge–Kutta methods</i>	426
544	<i>Third order, three-stage ARK methods</i>	429
545	<i>Fourth order, four-stage ARK methods</i>	431
546	<i>A fifth order, five-stage method</i>	433
547	<i>ARK methods for stiff problems</i>	434
55	Methods with Inherent Runge–Kutta Stability	436
550	<i>Doubly companion matrices</i>	436
551	<i>Inherent Runge–Kutta stability</i>	438
552	<i>Conditions for zero spectral radius</i>	440
553	<i>Derivation of methods with IRK stability</i>	442
554	<i>Methods with property F</i>	445
555	<i>Some non-stiff methods</i>	446
556	<i>Some stiff methods</i>	447
557	<i>Scale and modify for stability</i>	448
558	<i>Scale and modify for error estimation</i>	450
