

CONTENTS

Preface	ix
1 General System Concepts	1
1.1 The System Viewed as a Mapping	1
1.2 System Analysis Concepts	4
1.3 Time-Invariant (TI) Systems	5
1.4 No-Memory Systems	8
1.5 Simple Systems with Memory	17
1.6 A Model of Echoing	22
Problems	27
2 Linear Time-Invariant (LTI) Systems	33
2.1 Linear Systems	33
2.2 Linear Time-Invariant (LTI) Systems	37
2.3 The Convolution Integral	45
2.4 The Unit-Impulse Sifting Property	48
2.5 Convolution	56
Problems	
3 Properties of LTI Systems	63
3.1 Tandem Connection of LTI Systems	63
	v

3.2	A Consequence of the Commutative Property	67
3.3	The Unit Impulse Revisited	74
3.4	Convolution Revisited	77
3.5	Causality	80
3.6	Stability	85
3.7	System Continuity	90
3.8	The Potential Integral	93
	Problems	96
4	The Frequency Domain Viewpoint	105
4.1	The Characteristic Function of a Stable LTI System	106
4.2	Sinusoidal Response	109
4.3	Tandem-Connected LTI Systems	118
4.4	Continuous Frequency Representation of a Waveform	123
	Problems	128
5	The Fourier Transform	133
5.1	The Fourier Transform	134
5.2	An Example of a Fourier Transform Calculation	135
5.3	Even and Odd Functions	136
5.4	An Example of an Inverse Fourier Transform Calculation	137
5.5	Some Properties of the Fourier Transform	139
5.6	An Application of the Convolution Property	146
5.7	An Application of the Time- and Frequency-Shift Properties	147
5.8	An Application of the Time-Differentiation Property	149
5.9	An Application of the Scaling Property	152
5.10	A Parseval Relation and Applications	154
5.11	Transfer Function Constraints	161
	Problems	170
6	The Bilateral Laplace Transform	175
6.1	The Bilateral Laplace Transform	175
6.2	Some Properties of the RAC	187
6.3	Some Properties of the Bilateral Laplace Transform	191
	Problems	203

7	The Inverse Bilateral Laplace Transform	209
7.1	The Inverse Laplace Transform	209
7.2	The Linearity Property of the Inverse Laplace Transform	213
7.3	The Partial Fraction Expansion	216
7.4	Concluding Discussion and Summary	223
	Problems	227
8	Laplace Transform Analysis of the System Output	231
8.1	The Laplace Transform of the System Output	231
8.2	Causality and Stability in the s -Domain	237
8.3	Lumped Parameter Systems	241
8.4	Passive Systems	245
8.5	The Differential Equation View of Lumped Parameter Systems	252
	Problems	260
9	S-Plane View of Gain and Phase Shift	265
9.1	Geometric View of Gain and Phase Shift	265
9.2	The Pole-Zero Pair	272
9.3	Minimum-Phase System Functions	279
9.4	Bandpass System Functions	286
9.5	Algebraic Determination of the System Function	291
	Problems	299
10	Interconnection of Systems	305
10.1	Basic LTI System Interconnections	305
10.2	Analysis of the Feedback System	308
10.3	The Routh–Hurwitz Criterion	317
10.4	System Block Diagrams	328
10.5	Model Consistency	336
10.6	The State-Space Approach	343
	Problems	350

viii CONTENTS

Appendix A	A Primer on Complex Numbers and Complex Algebra	353
Appendix B	Energy Distribution in Transient Functions	363
Index		367
