Preface	xiii
1 Molecular representations and nomenclature	1
1.1 Molecular representations	1
1.2 Partial structures	3
1.3 Functional groups	4
1.4 Systematic nomenclature	6
1.5 Common groups and abbreviations	14
1.6 Common, non-systematic names	15
1.7 Trivial names for complex structures	15
1.8 Acronyms	15
1.9 Pronunciation	16
2 Atomic structure and bonding	19
2.1 Atomic structure	19
2.2 Bonding and valency	19
2.3 Atomic orbitals	20
2.4 Electronic configurations	23
2.5 Ionic bonding	23
2.6 Covalent bonding	24
2.6.1 Molecular orbitals: σ and π bonds	24
2.6.2 Hybrid orbitals in carbon	26
2.6.3 Hybrid orbitals in oxygen and nitrogen	33
2.7 Bond polarity	35
2.8 Conjugation	37
2.9 Aromaticity	41
2.9.1 Benzene	41
2.9.2 Cyclooctatetraene	42
2.9.3 Hückel's rule	42
2.9.4 Kekulé structures	44
2.9.5 Aromaticity and ring currents	44

2.9.6	Aromatic heterocycles	44
2.9.7	Fused rings	44
2.10	Resonance structures and curly arrows	45
2.11	Hydrogen bonding	49
2.12	Molecular models	51
3	Stereochemistry	55
3.1	Hybridization and bond angles	55
3.2	Stereoisomers	56
3.3	Conformational isomers	57
3.3.1	Conformations of acyclic compounds	57
3.3.2	Conformations of cyclic compounds	60
3.4	Configurational isomers	73
3.4.1	Optical isomers: chirality and optical activity	73
3.4.2	Cahn–Ingold–Prelog system to describe configuration at chiral centres	80
3.4.3	Geometric isomers	83
3.4.4	Configurational isomers with several chiral centres	85
3.4.5	<i>Meso</i> compounds	90
3.4.6	Chirality without chiral centres	92
3.4.7	Prochirality	94
3.4.8	Separation of enantiomers: resolution	99
3.4.9	Fischer projections	100
3.4.10	D and L configurations	103
3.5	Polycyclic systems	106
3.5.1	<i>Spiro</i> systems	106
3.5.2	Fused ring systems	107
3.5.3	Bridged ring systems	116
4	Acids and bases	121
4.1	Acid–base equilibria	121
4.2	Acidity and pK_a values	122
4.3	Electronic and structural features that influence acidity	125
4.3.1	Electronegativity	125
4.3.2	Bond energies	125
4.3.3	Inductive effects	125
4.3.4	Hybridization effects	128
4.3.5	Resonance/delocalization effects	129
4.4	Basicity	135
4.5	Electronic and structural features that influence basicity	136
4.5.1	Electronegativity	136
4.5.2	Inductive effects	137
4.5.3	Hybridization effects	138
4.5.4	Resonance/delocalization effects	139
4.6	Basicity of nitrogen heterocycles	143
4.7	Polyfunctional acids and bases	144
4.8	pH	146
4.9	The Henderson–Hasselbalch equation	149

4.10	Buffers	152
4.11	Using pK_a values	155
4.11.1	Predicting acid–base interactions	155
4.11.2	Isotopic labelling using basic reagents	157
4.11.3	Amphoteric compounds: amino acids	159
4.11.4	pK_a and drug absorption	164
5	Reaction mechanisms	167
5.1	Ionic reactions	167
5.1.1	Bond polarity	170
5.1.2	Nucleophiles, electrophiles, and leaving groups	171
5.2	Radical reactions	171
5.3	Reaction kinetics and mechanism	173
5.4	Intermediates and transition states	173
5.5	Types of reaction	174
5.6	Arrows	175
6	Nucleophilic reactions: nucleophilic substitution	183
6.1	The S_N2 reaction: bimolecular nucleophilic substitution	183
6.1.1	The effect of substituents	184
6.1.2	Nucleophiles: nucleophilicity and basicity	185
6.1.3	Solvent effects	187
6.1.4	Leaving groups	188
6.1.5	S_N2 reactions in cyclic systems	190
6.2	The S_N1 reaction: unimolecular nucleophilic substitution	191
6.2.1	The effect of substituents	193
6.2.2	S_N1 reactions in cyclic systems	195
6.2.3	S_N1 or S_N2 ?	195
6.3	Nucleophilic substitution reactions	198
6.3.1	Halide as a nucleophile: alkyl halides	198
6.3.2	Oxygen and sulfur as nucleophiles: ethers, esters, thioethers, epoxides	198
6.3.3	Nitrogen as a nucleophile: ammonium salts, amines	201
6.3.4	Carbon as a nucleophile: nitriles, Grignard reagents, acetylides	204
6.3.5	Hydride as nucleophile: lithium aluminium hydride and sodium borohydride reductions	205
6.3.6	Formation of cyclic compounds	206
6.4	Competing reactions: eliminations and rearrangements	206
6.4.1	Elimination reactions	207
6.4.2	Carbocation rearrangement reactions	214
7	Nucleophilic reactions of carbonyl groups	221
7.1	Nucleophilic addition to carbonyl groups: aldehydes and ketones	221
7.1.1	Aldehydes are more reactive than ketones	222
7.1.2	Nucleophiles and leaving groups: reversible addition reactions	223
7.2	Oxygen as a nucleophile: hemiacetals, hemiketals, acetals and ketals	224
7.3	Water as a nucleophile: hydrates	234
7.4	Sulfur as a nucleophile: hemithioacetals, hemithioketals, thioacetals and thioketals	235

7.5	Hydride as a nucleophile: reduction of aldehydes and ketones, lithium aluminium hydride and sodium borohydride	235
7.6	Carbon as a nucleophile	238
7.6.1	Cyanide: cyanohydrins	238
7.6.2	Organometallics: Grignard reagents and acetylides	240
7.7	Nitrogen as a nucleophile: imines and enamines	242
7.7.1	Imines	242
7.7.2	Enamines	247
7.8	Nucleophilic substitution on carbonyl groups: carboxylic acid derivatives	248
7.9	Oxygen and sulfur as nucleophiles: esters and carboxylic acids	252
7.9.1	Alcohols: ester formation	252
7.9.2	Water: hydrolysis of carboxylic acid derivatives	256
7.9.3	Thiols: thioacids and thioesters	261
7.10	Nitrogen as a nucleophile: amides	262
7.11	Hydride as a nucleophile: reduction of carboxylic acid derivatives	267
7.12	Carbon as a nucleophile: Grignard reagents	271
7.13	Nucleophilic substitution on derivatives of sulfuric and phosphoric acids	272
7.13.1	Sulfuric acid derivatives	272
7.13.2	Phosphoric acid derivatives	275
8	Electrophilic reactions	283
8.1	Electrophilic addition to unsaturated carbon	283
8.1.1	Addition of hydrogen halides to alkenes	284
8.1.2	Addition of halogens to alkenes	286
8.1.3	Electrophilic additions to alkynes	292
8.1.4	Carbocation rearrangements	296
8.2	Electrophilic addition to conjugated systems	296
8.3	Carbocations as electrophiles	299
8.4	Electrophilic aromatic substitution	304
8.4.1	Electrophilic alkylations: Friedel–Crafts reactions	306
8.4.2	Electrophilic acylations: Friedel–Crafts reactions	308
8.4.3	Effect of substituents on electrophilic aromatic substitution	309
8.4.4	Electrophilic substitution on polycyclic aromatic compounds	315
9	Radical reactions	319
9.1	Formation of radicals	319
9.2	Structure and stability of radicals	321
9.3	Radical substitution reactions: halogenation	322
9.3.1	Stereochemistry of radical reactions	325
9.3.2	Allylic and benzylic substitution: halogenation reactions	325
9.4	Radical addition reactions: addition of HBr to alkenes	328
9.4.1	Radical addition of HBr to conjugated dienes	330
9.4.2	Radical polymerization of alkenes	331
9.4.3	Addition of hydrogen to alkenes and alkynes: catalytic hydrogenation	332
9.5	Radical addition of oxygen: autoxidation reactions	333
9.6	Phenolic oxidative coupling	340

10	Nucleophilic reactions involving enolate anions	347
10.1	Enols and enolization	347
10.1.1	Hydrogen exchange	351
10.1.2	Racemization	352
10.1.3	Conjugation	354
10.1.4	Halogenation	356
10.2	Alkylation of enolate anions	357
10.3	Addition–dehydration: the aldol reaction	360
10.4	Other stabilized anions as nucleophiles: nitriles and nitromethane	365
10.5	Enamines as nucleophiles	366
10.6	The Mannich reaction	369
10.7	Enolate anions from carboxylic acid derivatives	372
10.8	Acylation of enolate anions: the Claisen reaction	379
10.8.1	Reverse Claisen reactions	386
10.9	Decarboxylation reactions	387
10.10	Nucleophilic addition to conjugated systems: conjugate addition and Michael reactions	393
11	Heterocycles	403
11.1	Heterocycles	403
11.2	Non-aromatic heterocycles	403
11.3	Aromaticity and heteroaromaticity	405
11.4	Six-membered aromatic heterocycles	407
11.4.1	Pyridine	407
11.4.2	Nucleophilic addition to pyridinium salts	414
11.4.3	Tautomerism: pyridones	416
11.4.4	Pyrylium cation and pyrones	418
11.5	Five-membered aromatic heterocycles	420
11.5.1	Pyrrole	420
11.5.2	Furan and thiophene	426
11.6	Six-membered rings with two heteroatoms	427
11.6.1	Diazines	427
11.6.2	Tautomerism in hydroxy- and amino-diazines	429
11.7	Five-membered rings with two heteroatoms	432
11.7.1	1,3-Azoles: imidazole, oxazole, and thiazole	432
11.7.2	Tautomerism in imidazoles	433
11.7.3	Reactivity of 1,3-azoles	436
11.7.4	1,2-Azoles: pyrazole, isoxazole, and isothiazole	438
11.8	Heterocycles fused to a benzene ring	438
11.8.1	Quinoline and isoquinoline	440
11.8.2	Indole	443
11.9	Fused heterocycles	448
11.9.1	Purines	449
11.9.2	Pteridines	452
11.10	Some classic aromatic heterocycle syntheses	457
11.10.1	Hantzsch pyridine synthesis	458
11.10.2	Skraup quinoline synthesis	458

11.10.3	Bischler–Napieralski isoquinoline synthesis	459
11.10.4	Pictet–Spengler tetrahydroisoquinoline synthesis	460
11.10.5	Knorr pyrrole synthesis	460
11.10.6	Paal–Knorr pyrrole synthesis	461
11.10.7	Fischer indole synthesis	461
12	Carbohydrates	463
12.1	Carbohydrates	463
12.2	Monosaccharides	463
12.2.1	Enolization and isomerization	467
12.2.2	Cyclic hemiacetals and hemiketals	468
12.2.3	The anomeric centre	469
12.3	Alditols	473
12.4	Glycosides	474
12.5	Cyclic acetals and ketals: protecting groups	481
12.6	Oligosaccharides	482
12.7	Polysaccharides	484
12.7.1	Structural aspects	484
12.7.2	Hydrolysis of polysaccharides	485
12.8	Oxidation of sugars: uronic acids	485
12.9	Aminosugars	492
12.10	Polymers containing aminosugars	495
13	Amino acids, peptides and proteins	499
13.1	Amino acids	499
13.2	Peptides and proteins	504
13.3	Molecular shape of proteins: primary, secondary and tertiary structures	505
13.3.1	Tertiary structure: intramolecular interactions	511
13.3.2	Protein binding sites	513
13.4	The chemistry of enzyme action	515
13.4.1	Acid–base catalysis	516
13.4.2	Enolization and enolate anion biochemistry	523
13.4.3	Thioesters as intermediates	530
13.4.4	Enzyme inhibitors	530
13.5	Peptide biosynthesis	533
13.5.1	Ribosomal peptide biosynthesis	533
13.5.2	Non-ribosomal peptide biosynthesis	535
13.6	Peptide synthesis	540
13.6.1	Protecting groups	540
13.6.2	The dicyclohexylcarbodiimide coupling reaction	542
13.6.3	Peptide synthesis on polymeric supports	542
13.7	Determination of peptide sequence	544
14	Nucleosides, nucleotides and nucleic acids	549
14.1	Nucleosides and nucleotides	549
14.2	Nucleic acids	551
14.2.1	DNA	551
14.2.2	Replication of DNA	553
14.2.3	RNA	555

14.2.4	The genetic code	555
14.2.5	Messenger RNA synthesis: transcription	556
14.2.6	Transfer RNA and translation	556
14.3	Some other important nucleosides and nucleotides: ATP, SAM, Coenzyme A, NAD, FAD	559
14.4	Nucleotide biosynthesis	563
14.5	Determination of nucleotide sequence	564
14.5.1	Restriction endonucleases	564
14.5.2	Chemical sequencing	564
14.6	Oligonucleotide synthesis: the phosphoramidite method	566
14.7	Copying DNA: the polymerase chain reaction	569
15	The organic chemistry of intermediary metabolism	573
15.1	Intermediary metabolism	573
15.1.1	Oxidation reactions and ATP	574
15.1.2	Oxidative phosphorylation and the electron transport chain	577
15.2	The glycolytic pathway	579
15.3	The Krebs cycle	584
15.4	Oxidation of fatty acids	589
15.4.1	Metabolism of saturated fatty acids	590
15.4.2	Metabolism of unsaturated fatty acids	592
15.5	Synthesis of fatty acids	594
15.6	Amino acids and transamination	598
15.7	PLP-dependent reactions	600
15.8	TPP-dependent reactions	605
15.9	Biotin-dependent carboxylations	609
16	How to approach examination questions: selected problems and answers	611
16.1	Examination questions: useful advice	611
16.2	How to approach the problem: 'Propose a mechanism for ...'	612
16.3	Worked problems	613
	Index	675
