<b>Foreword</b>	<b>xi</b>
<b>Preface</b>	<b>xiii</b>
<b>About the author</b>	<b>xvii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Quality and quality improvement	1
1.2 Six Sigma quality improvement	3
1.3 The Six Sigma roadmap and DMAIC	6
1.4 The role of statistical methods in Six Sigma	7
1.5 MINITAB and its role in the implementation of statistical methods	9
1.6 Exercises and follow-up activities	10
<b>2 Introduction to MINITAB, data display, summary and manipulation</b>	<b>11</b>
2.1 The run chart – a first MINITAB session	12
2.1.1 Input of data via keyboard and creation of a run chart in MINITAB	12
2.1.2 MINITAB projects and their components	18
2.2 Display and summary of univariate data	26
2.2.1 Histogram and distribution	26
2.2.2 Shape of a distribution	29
2.2.3 Location or central tendency	31
2.2.4 Variability or spread	37
2.3 Data input, output, manipulation and management	41
2.3.1 Data input and output	41
2.3.2 Stacking, unstacking of data, changing data type and coding	42
2.4 Exercises and follow-up activities	53
<b>3 Exploratory data analysis, display and summary of multivariate data</b>	<b>57</b>
3.1 Exploratory data analysis	57
3.1.1 Stem-and-leaf displays	57
3.1.2 Outliers and outlier detection	61
3.1.3 Boxplots	62
3.1.4 Brushing	65
3.2 Display and summary of bivariate and multivariate data	67
3.2.1 Bivariate data – scatterplots and marginal plots	67
3.2.2 Covariance and correlation	69

3.2.3	Multivariate data – matrix plots	74
3.2.4	Multi-vari charts	77
3.3	Exercises and follow-up activities	79
<b>4</b>	<b>Statistical models</b>	<b>83</b>
4.1	Fundamentals of probability	84
4.1.1	Concept and notation	84
4.1.2	Rules for probabilities	86
4.2	Probability distributions for counts and measurements	89
4.2.1	Binomial distribution	89
4.2.2	Poisson distribution	96
4.2.3	Normal (Gaussian) distribution	98
4.3	Distribution of means and proportions	107
4.3.1	Two preliminary results	107
4.3.2	Distribution of the sample mean	111
4.3.3	Distribution of the sample proportion	115
4.4	Exercises and follow-up activities	117
<b>5</b>	<b>Control charts</b>	<b>123</b>
5.1	Shewhart charts for measurement data	123
5.1.1	X and MR charts for individual measurements	123
5.1.2	Tests for evidence of special cause variation on Shewhart charts	129
5.1.3	Xbar and R charts for samples (subgroups) of measurements	133
5.2	Shewhart charts for attribute data	143
5.2.1	P chart for proportion nonconforming	143
5.2.2	NP chart for number nonconforming	149
5.2.3	C chart for count of nonconformities	150
5.2.4	U chart for nonconformities per unit	151
5.2.5	Funnel plots	152
5.3	Process adjustment	154
5.3.1	Process tampering	154
5.3.2	Autocorrelated process data and process adjustment	156
5.4	Exercises and follow-up activities	157
<b>6</b>	<b>Process capability analysis</b>	<b>165</b>
6.1	Process capability	165
6.1.1	Capability analysis for measurement data	165
6.1.2	Process capability indices and sigma quality levels	175
6.1.3	Process capability analysis with nonnormal data	178
6.1.4	Capability analysis for attribute data	180
6.2	Exercises and follow-up activities	182
<b>7</b>	<b>Process experimentation with a single factor</b>	<b>185</b>
7.1	Fundamental concepts in hypothesis testing	186
7.2	Tests and confidence intervals for the comparison of means and of proportions with a standard	194

7.2.1	Tests based on the standard normal distribution – $z$ -tests	194
7.2.2	Tests based on the Student $t$ -distribution – $t$ -tests	204
7.2.3	Tests for proportions	208
7.2.4	The nonparametric sign and Wilcoxon tests	210
7.3	Tests and confidence intervals for the comparison of two means or two proportions	213
7.3.1	Two-sample $t$ -test	213
7.3.2	Tests for two proportions	217
7.3.3	Nonparametric Mann–Whitney test	221
7.4	The analysis of paired data – $t$ -tests and sign tests	223
7.5	Experiments with a single factor having more than two levels	226
7.5.1	Design and analysis of a single-factor experiment	227
7.5.2	The fixed effects model	238
7.5.3	The random effects model	241
7.5.4	The nonparametric Kruskal–Wallis test	246
7.6	Blocking in single-factor experiments	248
7.7	Experiments with a single factor, with more than two levels, where the response is a proportion	257
7.8	Tests for equality of variance	259
7.9	Exercises and follow-up activities	262
<b>8</b>	<b>Process experimentation with two or more factors</b>	<b>269</b>
8.1	General factorial experiments	270
8.1.1	Creation of a general factorial experimental design	270
8.1.2	Display and analysis of data from a general factorial experiment	273
8.1.3	The fixed effects model, comparisons	280
8.1.4	The random effects model, components of variance	290
8.2	Full factorial experiments in the $2^k$ series	293
8.2.1	$2^2$ factorial experimental designs, display and analysis of data	293
8.2.2	Models and associated displays	304
8.2.3	Examples of $2^3$ and $2^4$ experiments, the use of Pareto and normal probability plots of effects	313
8.3	Fractional factorial experiments in the $2^{k-p}$ series	326
8.3.1	Introduction to fractional factorial experiments, confounding and resolution	326
8.3.2	Case study examples	332
8.4	Exercises and follow-up activities	337
<b>9</b>	<b>Evaluation of measurement processes</b>	<b>347</b>
9.1	Measurement process concepts	347
9.1.1	Bias, linearity, repeatability and reproducibility	347
9.1.2	Inadequate measurement units	354
9.2	Gauge repeatability and reproducibility (R&R) studies	356
9.3	Attribute scenarios	363
9.4	Exercises and follow-up activities	366

<b>10</b>	<b>Regression and model building</b>	<b>367</b>
10.1	Regression with a single predictor variable	367
10.2	Multiple regression	381
10.3	Response surface methods	386
10.4	Exercises and follow-up activities	391
<b>11</b>	<b>More about MINITAB</b>	<b>399</b>
11.1	Learning more about MINITAB and obtaining help	399
11.1.1	Meet MINITAB	399
11.1.2	Help	400
11.1.3	StatGuide	403
11.1.4	Tutorials	406
11.1.5	MINITAB on the web	407
11.2	Macros	409
11.2.1	MINITAB session commands	409
11.2.2	Global and local MINITAB macros	411
11.3	Further MINITAB	411
11.4	Postscript	412
	<b>Appendices</b>	<b>415</b>
	<b>References</b>	<b>425</b>
	<b>Index</b>	<b>429</b>
