

# CONTENTS

<b>Preface</b>	<b>xv</b>
<b>1 Experiments and Probability</b>	<b>1</b>
1.1 Definition of an Experiment	1
1.1.1 The Sample Space	1
1.1.2 The Borel Field	2
1.1.3 The Probability Measure	2
1.2 Combined Experiments	6
1.2.1 Cartesian Product of Two Experiments	6
1.2.2 Cartesian Product of $n$ Experiments	7
1.2.3 Counting Experiments	16
1.2.4 Selection Combined Experiment	18
1.3 Conditional Probability	20
1.3.1 Total Probability Theorem	23
1.3.2 Bayes's Theorem	24
1.4 Random Points	25
1.4.1 Uniform Random Points in an Interval	25
1.4.2 Nonuniform Random Points in an Interval	27
1.5 Summary	28
Problems	28
References	35
<b>2 Random Variables</b>	<b>37</b>
2.1 Definition of a Random Variable	37
2.1.1 Cumulative Distribution Function (CDF)	38
2.1.2 Probability Density Function (PDF)	40
2.1.3 Partial Characterizations	44
2.1.4 Conditional Cumulative Distribution Functions	47
2.1.5 Characteristic Function	49
2.1.6 Higher-Order Moments for Gaussian Random Variables	51
2.2 Common Continuous Random Variables	52
2.3 Common Discrete Random Variables	55
2.4 Transformations of One Random Variable	56
2.4.1 Transformation of One Random Variable	57
2.4.2 Cumulative Distribution Function	63
	<b>vii</b>

2.5	Computation of Expected Values	66
2.6	Two Random Variables	67
	2.6.1 Joint Cumulative Distribution Function	68
	2.6.2 Joint Probability Density Function	70
	2.6.3 Partial Characterizations	72
	2.6.4 Jointly Normal Random Variables	78
2.7	Two Functions of Two Random Variables	79
	2.7.1 Probability Density Function (Discrete Random Variables)	79
	2.7.2 Probability Density Function (Continuous Random Variables and Continuous Functions)	80
	2.7.3 Distribution Function (Continuous, Discrete, or Mixed)	86
2.8	One Function of Two Random Variables	88
	2.8.1 Probability Density Function (Discrete Random Variables)	88
	2.8.2 Probability Density Function (Continuous Random Variables)	89
2.9	Computation of $E[h(X, Y)]$	93
2.10	Multiple Random Variables	97
	2.10.1 Total Characterizations	97
	2.10.2 Partial Characterizations	98
	2.10.3 Gaussian Random Vectors	103
2.11	$M$ Functions of $N$ Random Variables	104
2.12	Summary	105
	Problems	106
	References	130
<b>3</b>	<b>Estimation of Random Variables</b>	<b>133</b>
	3.1 Estimation of Variables	133
	3.1.1 Basic Formulation for Estimation of Random Variables	133
	3.1.2 Bayes Performance Measure	134
	3.1.3 Statistical Characterizations of Data	134
	3.2 Linear MMSE Estimation	135
	3.2.1 Estimation of a Random Variable by a Constant	135
	3.2.2 Linear Estimation of One Random Variable from Another	136
	3.2.3 Linear Estimation of a Random Variable from $N$ Random Variables	139
	3.3 Nonlinear MMSE Estimation	148
	3.3.1 Nonlinear Estimation of One Random Variable from Another	148
	3.3.2 Nonlinear Estimation of One Random Variable from $N$ Random Variables	153
	3.3.3 Nonlinear Estimation of Gaussian Random Variables	154
	3.4 Properties of Estimators of Random Variables	156
	3.5 Bayes Estimation	157

3.5.1	Bayes Estimates	158
3.5.2	Examples of Bayes Estimators	160
3.6	Estimation of Nonrandom Parameters	164
3.6.1	Maximum Likelihood Estimation	165
3.6.2	Maximum Likelihood Estimation Examples	166
3.7	Summary	169
	Problems	170
	References	178
<b>4</b>	<b>Random Processes</b>	<b>179</b>
4.1	Definition of a Random Process	179
4.2	Characterizations of a Random Process	181
4.2.1	Total Characterization of a Random Process	182
4.2.2	First-Order Densities of a Random Process	182
4.2.3	Mean of a Random Process	183
4.2.4	Variance of a Random Process	183
4.2.5	Second-Order Densities of a Random Process	183
4.2.6	Autocorrelation and Autocovariance Functions of Random Processes	184
4.2.7	Power Spectral Density of a Random Process	185
4.2.8	Higher-Order Moments	185
4.2.9	Higher-Order Spectra	186
4.2.10	$N$ th-Order Densities	186
4.3	Stationarity of Random Processes	186
4.3.1	Wide Sense Stationary Random Processes	186
4.3.2	Properties for Wide Sense Stationary Random Processes	188
4.4	Examples of Random Processes	188
4.4.1	Straight Line Process	188
4.4.2	Semirandom Binary Transmission Process	191
4.4.3	Random Binary Transmission Process	194
4.4.4	Semirandom Telegraph Waves Process	197
4.4.5	Random Telegraph Process	200
4.4.6	Random Sinusoidal Signals	202
4.4.7	Random Walk Process	205
4.5	Definite Integrals of Random Processes	209
4.6	Joint Characterizations of Random Processes	212
4.6.1	First-Order Joint Densities	212
4.6.2	Cross-correlation Function	212
4.6.3	Cross-covariance Function	213
4.6.4	Joint Stationarity	213
4.6.5	Cross-spectral Density	214
4.7	Gaussian Random Processes	214
4.7.1	First-Order Densities for Gaussian Random Processes	214
4.7.2	Second-Order Densities for Gaussian Random Processes	215
4.8	White Random Processes	215
4.9	ARMA Random Processes	216

4.9.1	Moving Average Processes, $MA(q)$	217
4.9.2	Autoregressive Processes, $AR(p)$	221
4.9.3	Autoregressive Moving Average Processes, $ARMA(p, q)$	226
4.10	Periodic Random Processes	231
4.11	Sampling of Continuous Random Processes	231
4.12	Ergodic Random Processes	232
4.13	Summary	233
	Problems	234
	References	246
<b>5</b>	<b>Linear Systems: Random Processes</b>	<b>247</b>
5.1	Introduction	247
5.2	Classification of Systems	247
5.2.1	Linear Time-Invariant Systems	249
5.2.2	Linear Time-Varying Systems	249
5.3	Continuous Linear Time-Invariant Systems (Random Inputs)	250
5.3.1	Mean in–Mean out (Linear Time-Invariant Filters)	251
5.3.2	Autocorrelation in–Autocorrelation out (Linear Time-Invariant Filters)	252
5.3.3	Cross Correlation of the Input and Output	253
5.3.4	$n$ th-Order Densities in– $n$ th-Order Densities Out	257
5.3.5	Stationarity of the Output Process	257
5.4	Continuous Time-Varying Systems with Random Input	258
5.4.1	Mean in–Mean out (Linear Time-Varying Filter)	258
5.4.2	Autocorrelation in–Autocorrelation out (Linear Time-Varying Filter)	259
5.4.3	Cross Correlation of the Input and Output (Linear Time-Varying Filter)	259
5.4.4	$n$ th-Order Densities in– $n$ th-Order Densities out (Linear Time-Varying Filter)	260
5.4.5	Stationarity of the Output Process (Linear Time-Varying Filter)	260
5.5	Discrete Time-Invariant Linear Systems with Random Inputs	261
5.5.1	Mean in–Mean Out	261
5.5.2	Autocorrelation in–Autocorrelation Function Out	262
5.5.3	Cross-correlation Functions	263
5.5.4	$n$ th-Order Densities	263
5.5.5	Stationarity	263
5.5.6	MA, AR, and ARMA Random Processes	263
5.6	Discrete Time-Varying Linear Systems with Random Inputs	271
5.6.1	Mean in–Mean out (Time-Varying Discrete Time System)	271
5.6.2	Autocorrelation in–Autocorrelation Function out (Time-Varying Discrete Time System)	271

5.6.3	Cross-correlation Functions (Time-Varying Discrete Time System)	272
5.6.4	$n$ th-Order Densities	272
5.6.5	Stationarity	272
5.7	Linear System Identification	273
5.8	Derivatives of Random Processes	273
5.9	Multi-input, Multi-output Linear Systems	274
5.9.1	Output Means for MIMO(2, 2)	275
5.9.2	Cross-correlation Functions for MIMO(2, 2) Linear Systems	276
5.9.3	Autocorrelation Functions for Outputs of MIMO(2, 2) Linear Systems	276
5.9.4	Cross-correlation Functions for Outputs of MIMO(2, 2) Linear Systems	278
5.10	Transient in Linear Systems	278
5.10.1	Mean of the Output Process	279
5.10.2	Autocorrelation of the Output Process	279
5.11	Summary	283
	Problems	284
	References	293
<b>6</b>	<b>Nonlinear Systems: Random Processes</b>	<b>295</b>
6.1	Introduction	295
6.2	Classification of Nonlinear Systems	295
6.2.1	Zero-Memory Nonlinear Systems	296
6.2.2	Bilinear Systems	296
6.2.3	Trilinear Systems	302
6.2.4	Volterra Representation for General Nonlinear Systems	303
6.3	Random Outputs for Instantaneous Nonlinear Systems	305
6.3.1	First-Order Density for Instantaneous Nonlinear System	305
6.3.2	Mean of the Output Process	307
6.3.3	Second-Order Densities for Instantaneous Nonlinearities	308
6.3.4	Autocorrelation Function for Instantaneous Nonlinear Systems	309
6.3.5	Higher-Order Moments	313
6.3.6	Stationarity of Output Process	313
6.4	Characterizations for Bilinear Systems	313
6.4.1	Mean of the Output of a Bilinear System	314
6.4.2	Cross-correlation between Input and Output of a Bilinear System	314
6.4.3	Autocorrelation Function for the Output of a Bilinear System	315
6.5	Characterizations for Trilinear Systems	315
6.5.1	Mean of the Output of a Trilinear System	315

6.5.2	Cross-correlation between Input and Output of a Trilinear System	316
6.5.3	Autocorrelation Function for the Output of a Trilinear System	316
6.6	Characterizations for Volterra Nonlinear Systems	316
6.7	Higher-Order Characterizations	318
6.7.1	Moment Function for Random Processes	318
6.7.2	Cumulant Function for Random Processes	319
6.7.3	Polyspectrum for Random Processes	320
6.8	Summary	321
	Problems	322
	References	332
<b>7</b>	<b>Optimum Linear Filters: The Wiener Approach</b>	<b>335</b>
7.1	Optimum Filter Formulation	335
7.1.1	What Is to Be Estimated?	335
7.1.2	Type of Processing	336
7.1.3	Performance Measure	337
7.1.4	Information Specified	337
7.2	Basic Problems	338
7.2.1	Prediction of a Random Process	338
7.2.2	Filtering out Noise	339
7.2.3	Interpolation for Random Processes	340
7.2.4	Estimation of Properties of Random Processes	341
7.3	The Wiener Filter	342
7.3.1	Wiener-Kolmogorov Filter (Finite Interval)	342
7.3.2	Linear Time-Invariant Noncausal Filter	343
7.3.3	Linear Time-Invariant Causal Filter	346
7.3.4	Pure Prediction	351
7.4	The Discrete Wiener Filter	356
7.4.1	Linear Shift-Invariant Noncausal Filter	356
7.4.2	Linear Shift-Invariant Causal Filter	357
7.4.3	Discrete Time Pure Prediction	362
7.5	Optimal Linear System of Parametric Form	364
7.6	Summary	368
	Problems	369
	References	381
<b>8</b>	<b>Optimum Linear Systems: The Kalman Approach</b>	<b>383</b>
8.1	Introduction	383
8.2	Discrete Time Systems	384
8.2.1	State Dynamics with Random Excitations	386
8.2.2	Markov Sequence Model	388
8.2.3	Observation Model	388
8.3	Basic Estimation Problem	389

8.3.1	Problem Formulation	390
8.3.2	Linear Estimation with Minimum Mean Squared Error Criterion	391
8.4	Optimal Filtered Estimate	392
8.4.1	The Kalman Filter	393
8.4.2	The Anatomy of the Kalman Filter	395
8.4.3	Physiology of the Kalman Filter	396
8.5	Optimal Prediction	401
8.5.1	Fixed Lead Prediction	401
8.5.2	Fixed Lead Prediction (Sliding Window)	403
8.5.3	Fixed Point Prediction	403
8.6	Optimal Smoothing	404
8.6.1	Fixed Interval Smoothing	405
8.6.2	Fixed Point Smoothing	408
8.6.3	Fixed Lag Smoothing	409
8.7	Steady State Equivalence of the Kalman and Wiener Filters	410
8.7.1	Kalman Filter Formulation	411
8.7.2	Wiener Filter Formulation	412
8.8	Summary	414
	Problems	415
	References	420
<b>9</b>	<b>Detection Theory: Discrete Observation</b>	<b>423</b>
9.1	Basic Detection Problem	423
9.2	Maximum A Posteriori Decision Rule	424
9.2.1	Two-Class Problem (MAP)	425
9.2.2	$M$ -Class Problem (MAP)	427
9.3	Minimum Probability of Error Classifier	430
9.3.1	Two-Class Problem (MPE)	430
9.3.2	$M$ -Class Problem (MPE)	434
9.4	Bayes Decision Rule	437
9.4.1	Two-Class Problem (Bayes)	437
9.4.2	$M$ -Class Bayes Decision Rule	440
9.5	Special Cases for the Multiple-Class Problem (Bayes)	450
9.5.1	Special Case 1 (Minimum Probability of Error)	450
9.5.2	Special Case 2 (Minimum Probability of Error–Equal A Priori Probabilities)	451
9.6	Neyman-Pearson Classifier	455
9.6.1	Two Class Case	455
9.6.2	Receiver Operating Characteristic	457
9.7	General Calculation of Probability of Error	460
9.7.1	In Likelihood Ratio Space	461
9.7.2	In Pattern Space	461
9.7.3	In Feature Space	461
9.8	General Gaussian Problem	466
