

Contents at a Glance

<i>Introduction</i>	1
<i>Part I: Accessing Both Ends: Getting Data In and Info Out</i>	7
Chapter 1: Getting to Know Forms and Reports	9
Chapter 2: Getting Started with Queries	25
Chapter 3: Creating Simple Forms	45
Chapter 4: Building Basic Reports	67
<i>Part II: Creating Effective Queries</i>	93
Chapter 5: Creating Multi-Table Queries	95
Chapter 6: Modifying Data with Queries	113
Chapter 7: Expanding Queries with SQL	133
Chapter 8: Dealing with Quarrelsome Queries	151
<i>Part III: Building Really Useful Forms</i>	169
Chapter 9: Building Better Forms by Using Controls	171
Chapter 10: Using Multiple Tables in Forms	191
Chapter 11: Fixing Form Faults	205
<i>Part IV: Designing Great Reports</i>	219
Chapter 12: Adding Fancy Touches to Reports	221
Chapter 13: Creating Reports that Summarize Data	241
Chapter 14: When Reports Go Wrong	257
<i>Part V: Way Cool Advanced Queries, Forms, and Reports</i>	267
Chapter 15: Tricks for Finding Data with Queries	269
Chapter 16: Tricks for Updating with Queries	283
Chapter 17: Killer Ways to Improve Forms	295
Chapter 18: Expert Methods for Sharing Reports	315
Chapter 19: Making Reports Look Better	331
Chapter 20: Adding Efficiency with Great Tools	345

<i>Part VI: The Part of Tens</i>	363
Chapter 21: Ten Great Access Sites Online	365
Chapter 22: Ten Things to Know About Queries (That Also Help You with Forms and Reports)	371
<i>Index</i>	375

Table of Contents

<i>Introduction</i>	1
About This Book	1
Conventions Used in This Book	2
What You Don't Have to Read	2
Icons Used in This Book	3
Foolish Assumptions	3
How This Book Is Organized	4
Part I: Accessing Both Ends:	
Getting Data In and Info Out	4
Part II: Creating Effective Queries	4
Part III: Building Really Useful Forms	4
Part IV: Designing Great Reports	5
Part V: Way Cool Advanced Queries, Forms, and Reports	5
Part VI: The Part of Tens	5
 <i>Part I: Accessing Both Ends: Getting Data In and Info Out</i>	 7
 Chapter 1: Getting to Know Forms and Reports	 9
Finding a Fascination with Forms	10
Using forms to streamline data input	11
Entering data with the Form Wizard	12
Editing information with forms	14
Viewing data by using forms	15
Recognizing Why Reports Rock	15
Using reports to show results	15
Using reports to present data in a professional format	16
Using reports to show data analysis	17
Using reports to preserve the moment	18
Seeing Why Both Forms and Reports Have a Place	18
Understanding the Value of Queries	19
Introducing the query concept	20
Using queries to enhance forms and reports	21
Queries, Forms, and Reports Basics You Must Endure	21
Access Add-Ons and Extra Cool Tools	23

Chapter 2: Getting Started with Queries	25
Understanding the Types of Queries	25
Introducing select queries	26
Getting to know crosstab queries	28
Make-table queries	29
Using update queries	30
Introducing append queries	31
Getting to know delete queries	32
Creating Queries by Using a Wizard	33
Why you should be off to see the wizards	33
Understanding the limitations of the wizards	34
Creating your first query with a wizard	34
Creating Queries in Design View	38
Getting to know the Design view	38
Creating an example query in Design view	40
Modifying Queries for Better Results	42
Deleting a query	43
Modifying an existing query	43
Rearranging and deleting fields in a query	44
Chapter 3: Creating Simple Forms	45
Creating Forms with the Help of a Wizard	45
Meeting (And avoiding) the AutoForm Wizards	46
Making friends with the Form Wizard	48
Knowing what the wizard can't do	51
Building Forms the Hard Way: Using Design View	52
Introducing Design view tools	53
Starting a form in Design view	55
Associating a table to your form in Design view	56
Adding fields to the form	58
Modifying Forms You've Created	59
Aligning objects on a form	60
Setting consistent sizes	62
Spacing horizontally and vertically	63
Shrinking a big form down to size	64
Chapter 4: Building Basic Reports	67
Getting to Know the Types of Access Reports	67
Introducing simple reports	68
Using reports that group data	69
Using reports to summarize information	69
Creating Reports by Using a Wizard	70
Using the Report Wizard	70
Understanding what the wizard doesn't know	75

- Designing Reports from Scratch75
 - Understanding the report bands76
 - Setting up the report page78
 - Choosing your tables82
 - Selecting the fields83
- Modifying Report Layouts84
 - Deciding what needs to be done84
 - Moving and formatting those pesky labels85
 - Pulling the layout together to save paper87
- Adding Data from External Linked Tables88
 - Choosing a method for accessing external data89
 - Importing or linking external data90

Part II: Creating Effective Queries93

Chapter 5: Creating Multi-Table Queries95

- Understanding Multi-Table Queries95
 - Understanding the benefits of multiple tables96
 - Establishing relationships between multiple tables97
- Adding Multiple Tables to Queries98
 - Selecting multiple tables upfront98
 - Adding the tables you forgot about to your query100
 - Choosing the fields to use101
 - Making Access use the correct table102
- Linking to External Databases in Your Queries103
 - Understanding the types of external data you can use103
 - Linking to tables in another foreign database format104
 - Knowing what you can and can't do with a linked external database106
- Understanding Relationships in Queries106
 - Getting to know how tables are related107
 - Making sure that you choose the right relationships108
 - Setting up table relationships108

Chapter 6: Modifying Data with Queries113

- Understanding What You Can Modify with a Query113
 - Knowing what you can modify114
 - Knowing what you can't modify115
- Being Called to Action: Data-Modifying Queries115
- Creating New Tables with Queries117
 - Why you would want to create new tables117
 - Creating your first table with a make-table query118
- Updating Data by Using Queries121
 - Creating an update query example121
 - Understanding the update query results124

Deleting Data with Queries125
Adding New Data with Queries127
 Using an append query127
 Combining make-table and append queries131

Chapter 7: Expanding Queries with SQL133

Getting the Scoop on SQL133
 Understanding the “S” in SQL134
 Putting SQL in its place (at the heart
 of all Access queries)135
Understanding How SQL Can Help136
 Going beyond the automated query functions136
 Creating an indexed table with SQL137
 Modifying a table with SQL138
Viewing the SQL You’ve Already Created and Didn’t Know About139
 Switching to Design view139
 Changing to SQL view140
 Seeing the results in Datasheet view141
 Going back to Design view142
Getting Your Feet Wet with Simple SQL Statements143
Making Useful SQL Statements145
 Updating records with SQL145
 Creating and filling tables using SQL146
 Summarizing values using SQL147
 Deleting records using SQL147
A Nod to VBA Programmers148

Chapter 8: Dealing with Quarrelsome Queries151

Troubleshooting Queries That Don’t Quite Work151
 Understanding the clues Access gives you152
 Locating the problem152
 Using Datasheet view as a troubleshooting tool155
Troubleshooting Sassy SQL157
 Figuring out what went wrong157
 Trying Design view158
 Things to watch out for in SQL queries158
 Simplifying your SQL to find the problem159
Avoiding Improper Relationships160
 Understanding how bad relationships
 can mess you up160
 Making sure your relationships make sense162
 Correcting relationships that don’t work162
Junking Joins That Don’t Join163
 Understanding why default joins may not work163
 Correcting your joins163

Steering Around Empty Query Results	165
Understanding some of the causes of empty query results	165
Correcting a query that doesn't return any data	165
Preventing Data Destruction	166
Beginning by backing up	166
Avoiding destructive query results	166
What to do if your database seems to be kaput	167

***Part III: Building Really Useful Forms* 169**

Chapter 9: Building Better Forms by Using Controls 171

Getting to Know the Controls	171
Common Controls You Can Use	172
List box controls	173
Option button controls	174
Check box controls	174
Adding Controls to Your Forms	174
Adding list boxes to your forms	176
Adding option groups	179
Using check boxes on forms	181
Adding labels to toggle buttons	182
Incorporating ActiveX Controls	183
Modifying the Characteristics of Controls	186
An example of setting default values	186
Blocking access to certain controls	188
Improving controls by using tab order	188

Chapter 10: Using Multiple Tables in Forms 191

Understanding Forms and Subforms	191
Understanding the needs subforms fill	192
Getting to know the subform place	192
Adding Fields from Multiple Tables to Your Forms	193
Verifying relationships and adding fields	194
Adding subforms with the Form Wizard	195
Adding a subform after the fact	197
Choosing the Best Subform View	197
Making the switch from Datasheet view to another subform view	197
Introducing your subform view options	199
Adding Multiple Subforms	201
Navigating Records in Multi-Table Forms	202
Choosing the right navigator bar	202
Finding records with filters	203

Chapter 11: Fixing Form Faults	205
Preventing Invalid Data with Input Masks	205
Setting up an input mask with the wizard	206
Making an input mask from scratch	207
Limiting a User to Specific Values with Validation Rules	209
Setting up your own validation rules	209
Remembering Access validation rules	211
Quick validation rules you can use	212
Preventing Users from Changing Records	213
Looking Out for Poorly Formatted Data	214
Knowing what not to do	214
Formatting data on forms	216

Part IV: Designing Great Reports.....**219**

Chapter 12: Adding Fancy Touches to Reports	221
Adding Descriptive Titles to Your Reports	221
Getting title basics down	222
Modifying existing titles	223
Formatting your report titles	224
Getting Dynamic with Your Titles	224
Understanding how to use expressions in your titles	225
Using expressions to create dynamic titles	226
Using properties to control your expressions	227
Getting rid of the .mdb document extension	228
Coming up with Page Title Ideas	228
Adding Dates and Page Numbers	230
Choosing the right place for dates and numbers	230
Getting fancy with date displays	230
Discovering some neat page number tricks	232
Making Records Easier to Read with Alternating Bands of Color	232
Step 1: Picking colors and translating them to hex	233
Step 2: Writing code to apply your color bands	235
Making Records Stand Out	237
Chapter 13: Creating Reports that Summarize Data	241
Discovering How to Group Records	241
Understanding your record-grouping options	242
Creating your first report grouping	243
Making sure you get the right groups	246
Adding Subtotals and Totals	249
Understanding how subtotals and totals work	249
Adding totals to groups and reports	250
Using Some Advanced Summarizing Methods	251
Going beyond simple math	252
Converting string values	254

Finding the largest, smallest, and average values255
 Trimming off extra spaces255
 Rounding numbers256

Chapter 14: When Reports Go Wrong257

Troubleshooting Reports257
 Figuring out whether the report is really wrong258
 Figuring out what’s wrong with the report258
 Avoiding Bad Report Layouts260
 Considering the purpose of your report260
 Avoiding text box data overflow261
 Avoiding page overflow262
 Formatting data in reports263
 Eliminating Unnecessary Labels for Tighter Reports264
 Deciding whether you really need all those labels264
 Deleting labels265
 Moving labels to headers265

Part V: Way Cool Advanced Queries, Forms, and Reports.....267

Chapter 15: Tricks for Finding Data with Queries269

Finding Just the Data You Need270
 Getting to know the operators270
 Selecting a range of records271
 Finding data that’s close but not exact275
 Creating Queries That Ask What to Find277
 Understanding parameter queries277
 Building your very own parameter query278
 Excluding Data You Don’t Want279
 Eliminating duplicates from results280
 Finding duplicates with SQL queries280
 Modifying join properties to get the results you want281

Chapter 16: Tricks for Updating with Queries283

Creating New Fields with a Query283
 Deciding whether using a query to add fields is worth it284
 Adding your first field with a query284
 Adding Default Values by Using a Query286
 Getting to know what you can add286
 Adding default values to your very first field286
 Making sure you don’t override real data287
 Performing Calculations288
 Determining whether to use a query for your calculations288
 Writing your first query calculations288

Updating Records by Using Data from Another Table	290
Choosing the right type of query for your updates	291
Updating data in one table with data from another without any conditions	291
Making sure the right data is updated	294
Chapter 17: Killer Ways to Improve Forms	295
Prequalifying the Data Entered	295
Creating lookup lists	296
Setting default values	301
Crafting Forms That Are Easier to Use	302
Making data appear in a logical order	303
Controlling the order for displaying records	303
Adding command buttons for common tasks	304
Creating a switchboard for better usability	309
Creating your own switchboard	309
Presenting data for information only	311
Making read-only fields	312
Giving users help with text prompts	312
Chapter 18: Expert Methods for Sharing Reports	315
Sharing Report Data with Microsoft Excel	315
Laying out reports so that they work in Excel	316
Exporting your report data to Excel	318
Sending Reports to Microsoft Word	320
Sending report data to Word	320
Using the Word Mail Merge feature with Access	321
Using OLE Objects in Reports	323
Understanding OLE objects	323
Linking versus embedding	323
Adding your first OLE object to your Access database	325
Troubleshooting OLE objects so that they actually work	328
Chapter 19: Making Reports Look Better	331
Enhancing the Appearance of Important Information	331
Sorting report data for clarity	332
Making data seem to jump out	334
Printing on Standard Labels	337
Keeping Related Data Together	339
Understanding why Access splits records	340
Tricks you can use to avoid splitting grouped records	340
Tricks you can use to avoid splitting sorted records	341
Adding Your Logo to Reports	342

Chapter 20: Adding Efficiency with Great Tools345

- Using Cool Tools to Document Everything346
 - Comparing Access databases with CompareWiz346
 - Comparing the data in Access databases with CompareDataWiz347
 - Checking out your queries with Query Tree Editor348
 - Fixing database corruption with AccessFIX350
- Souping Up Your Database351
 - Optimizing your Access database with SSW Performance Pro!351
 - Enhancing your Access forms with Selector353
 - Creating better forms with ShrinkerStretcher353
 - Creating forms from existing forms with OmniForm354
- Using Software to Share Stuff355
 - Using Snapshot Viewer for Access to send a report to non-Access users355
 - Linking Access and PowerPoint by using Take-Off DATAPOINT356
 - Sending data to QuickBooks with accessBooks Updater357
 - Bringing QuickBooks data to Access with Digital Cows Deluxe Exporter358
 - Bringing data from Excel with Excel Import Assistant359
 - Merging data with Word by using Word Link for Access361

***Part VI: The Part of Tens*363**

Chapter 21: Ten Great Access Sites Online365

- Access Database Tips366
- Access Monster366
- Easy Access Database Directory366
- Jamie’s Software367
- Lebans.com367
- Microsoft Access Database Solutions367
- Microsoft Office Online Access368
- MSDN — Microsoft Developer Network368
 - MSDN Access code samples369
 - MSDN Access site369
 - Office Solutions Development369
- Roger’s Access Library369
- The Access Web370

**Chapter 22: Ten Things to Know About Queries
(That Also Help You with Forms and Reports)371**

Queries Act Like Tables	371
Select Queries Are Always Safe	372
All Queries Are SQL Queries	372
Action Queries Can Harm Your Data	372
You Need Joins to Use Multiple Tables in Queries	372
Queries Select All Records Unless You Specify Criteria	373
Datasheet View Shows Results	
without Running the Query	373
Make-Table Queries Always Begin with an Empty Table	373
Queries Need a Record Source	373
Delete Queries Are Forever	374

***Index*.....375**
