

## Contents

**Preface** *XIII*

**List of Symbols** *XVII*

<b>1</b>	<b>Rocket Fundamentals</b>	<b>1</b>
1.1	The Rocket Principle	2
1.2	Rocket Thrust	4
1.2.1	Pressure Becomes Thrust	4
1.2.2	Momentum Thrust and Pressure Thrust	9
1.2.3	Continuity Equation	10
1.3	Rocket Performance	11
1.4	Rocket Equation of Motion	13
	Problems	15
<b>2</b>	<b>Rocket Flight</b>	<b>17</b>
2.1	General Considerations	17
2.2	Rocket in Free Space	19
2.3	Impulsive Maneuvers	20
2.4	Rocket in a Gravitational Field	20
2.4.1	Brief Thrust	21
2.4.2	Gravitational Loss	21
2.5	Delta- <i>v</i> Budget	23
2.6	Fuel Demand – Star Trek Plugged	24
2.7	Rocket Efficiency	26
2.8	Payload Considerations	28
2.9	Relativistic Rocket	30
2.9.1	Space Flight Dynamics	31
2.9.2	Relativistic Rocket Equation	34
2.9.3	Exhaust Considerations	36
2.9.4	External Efficiency	38

2.9.5	Space-Time Transformations	39
	Problems	41
<b>3</b>	<b>Rocket Staging</b>	<b>43</b>
3.1	Serial Staging – General Considerations	44
3.1.1	Definitions	44
3.1.2	Rocket Equation	47
3.2	Stage Optimization	47
3.2.1	Road to Stage Optimization	47
3.2.2	General Optimization	48
3.3	Analytical Solutions	50
3.3.1	Uniform Staging	51
3.3.2	Uniform Exhaust Velocities	53
3.3.3	Uneven Staging	54
3.4	Stage Number Determination	56
3.5	Parallel Staging	60
3.6	Other Types of Staging	62
	Problems	63
<b>4</b>	<b>Thermal Propulsion</b>	<b>65</b>
4.1	Engine Thermodynamics	66
4.1.1	Physics of Propellant Gases	66
4.1.2	Flow Velocity	70
4.1.3	Mass Flow Density	71
4.1.4	Flow at the Throat	72
4.1.5	Flow in the Nozzle	73
4.1.6	Ideal Nozzle Adaptation	77
4.1.7	Engine Performance	80
4.1.8	Engine Thrust	82
4.2	Thermal Engine Design	85
4.2.1	Combustion Chamber Design	85
4.2.2	Nozzle Design	85
4.2.3	Thrust Coefficient $C_f$	86
4.2.4	Thrust Performance	87
4.2.5	Nozzle Efficiency $C_n$	88
4.2.6	Nozzle Shape	90
	Problems	93
<b>5</b>	<b>Electric Propulsion</b>	<b>95</b>
5.1	Overview	95
5.2	Ion Engine	96
5.2.1	Ion Acceleration	97

5.2.2	Thrust of an Ion Engine	99
5.2.3	Internal Efficiency	101
5.3	Electric Propulsion Optimization Problems	102
<b>6</b>	<b>Ascent Flight</b>	<b>107</b>
6.1	Earth's Atmosphere	107
6.1.1	Density Master Equation	107
6.1.2	Homosphere (Barometric Formula)	110
6.1.3	Heterosphere	111
6.1.4	Piecewise-Exponential Atmospheric Model	113
6.2	Equations of Motion	114
6.3	Ascent Phases	119
6.4	Optimum-Ascent Problem	121
6.4.1	Formulation of Problem	121
6.4.2	Gravity-Turn Maneuver	124
6.4.3	Pitch Maneuver	125
6.4.4	Constant-Pitch-Rate Maneuver	126
6.4.5	Optimum-Ascent Trajectory	128
<b>7</b>	<b>Orbits</b>	<b>131</b>
7.1	Equation of Motion	131
7.1.1	Gravitational Potential	131
7.1.2	Gravitational Field	134
7.1.3	Conservation Laws	135
7.1.4	Newton's Laws and Equation of Motion	136
7.1.5	Real Two-Body Problem	138
7.2	Conservation Laws in a Gravitational Field	141
7.2.1	Angular Momentum Conservation	141
7.2.2	Motion in a Plane	142
7.2.3	Kepler's Second Law	143
7.2.4	Energy Conservation	144
7.2.5	Rotational Potential	145
7.3	Motion in a Gravitational Field	146
7.3.1	Orbit Equation	146
7.3.2	Orbit Velocity, Flight Path Angle	149
7.3.3	Orbital Energy and Angular Momentum	151
7.3.4	Orbital Elements (Keplerian Elements)	153
7.3.5	Position on the Orbit	155
7.4	Keplerian Orbits	156
7.4.1	Circular Orbit	156
7.4.2	Parabolic Orbit	157
7.4.3	Elliptical Orbit	159

7.4.4	Hyperbolic Orbit	166
7.4.5	Rectilinear Orbit	168
7.5	Life in Other Universes?	172
7.5.1	Equation of Motion in $n$ Dimensions	172
7.5.2	The $n = 3$ Universe	175
7.5.3	The $n = 4$ Universe	175
7.5.4	Universes with $n \geq 5$	177
7.5.5	Universes with $n \leq 2$	178
	Problems	180
<b>8</b>	<b>Orbit Transitions</b>	<b>185</b>
8.1	Two-Impulse Transfer (Hohmann Transfer)	185
8.1.1	General Considerations	186
8.1.2	Transfer between Circular Orbits	187
8.1.3	Transfer between Nearly Circular Orbits	192
8.1.4	Sensitivity Analysis	193
8.2	Continuous Thrust Transfer	195
8.3	Three-Impulse Transfer	197
8.4	One-Impulse Maneuvers	200
8.4.1	General Considerations	200
8.4.2	Orbit Correction Maneuvers	202
	Problems	207
<b>9</b>	<b>Interplanetary Flight</b>	<b>209</b>
9.1	Patched-Conics Method	210
9.1.1	Sphere of Influence	210
9.1.2	Patched Conics	212
9.2	Departure Orbits	214
9.3	Transit Orbits	217
9.3.1	Hohmann Transfers	217
9.3.2	Non-Hohmann Transfers	220
9.4	Arrival Orbit	226
9.5	Flyby Maneuvers	228
9.5.1	Basic Considerations	228
9.5.2	Flyby Framework	230
9.5.3	Flyby Analysis in the Planetocentric System	232
9.5.4	Flyby Analysis in the Heliocentric System	238
9.5.5	Change of Orbital Elements	242
9.6	Earth–Moon Orbits	244
9.6.1	Rapprochement Orbits	244
9.6.2	Free-Return Trajectories	246
9.7	Weak Stability Boundary Transfers	247
	Problems	251

<b>10</b>	<b>Reentry</b>	<b>253</b>
10.1	Introduction	253
10.1.1	Thermal Problem Setting	253
10.1.2	Entry Interface	255
10.1.3	Deorbit (Phase A)	255
10.2	Equations of Motion	260
10.2.1	Normalized Equations of Motion	261
10.2.2	Reduced Equations of Motion	263
10.3	Preliminary Considerations	268
10.3.1	Reentry – Phase B	269
10.3.2	Ballistic Reentry Without Perturbations	270
10.3.3	Maximum Heating for Ballistic Reentries	273
10.3.4	Reentry with Lift	274
10.4	Second-Order Solutions	276
10.4.1	Flight Path Angle	276
10.4.2	Critical Deceleration	278
10.5	Low-Lift Reentry (First-Order Solutions)	279
10.5.1	Velocity	279
10.5.2	Entry Trajectory	280
10.5.3	Critical Deceleration	282
10.6	Reflection and Skip Reentry	285
10.6.1	Reflection	285
10.6.2	Skip Reentry	288
10.6.3	Phygoid Modes	291
10.7	Lifting Reentry	295
10.7.1	Equations of Motion and L/D Control Law	296
10.7.2	Critical Deceleration Parameters	298
10.7.3	Maximum Heat Load	299
10.8	Space Shuttle Reentry	300
10.8.1	From Deorbit Burn to Entry Interface	300
10.8.2	From Entry Interface down to 80 km	302
10.8.3	Blackout Phase	303
10.8.4	Aerodynamic Flight Phase	304
	Problems	305
<b>11</b>	<b>Three-Body Problem</b>	<b>307</b>
11.1	Overview	307
11.2	Synchronous Orbits	309
11.2.1	Isomass Configurations	310
11.2.2	Euler Configuration	311
11.2.3	Lagrange Configuration	316
11.3	Restricted Three-Body Problem	318

11.3.1	Eulerian Points	320
11.3.2	Lagrangian Points	322
11.4	Circular Restricted Three-Body Problem	323
11.4.1	Energy Conservation in the CR3BP	323
11.4.2	Jacobi's Integral	325
11.4.3	Orbits in the Synodic System	326
11.4.4	Stability and Dynamics at Eulerian Points	328
11.4.5	Stability and Dynamics at Lagrangian Points	334
	Problems	339
<b>12</b>	<b>Orbit Perturbations</b>	<b>341</b>
12.1	Problem Setting	341
12.1.1	General Considerations	341
12.1.2	Gaussian Variational Equations	343
12.2	Gravitational Perturbations	345
12.2.1	Geoid	345
12.2.2	Gravitational Potential	346
12.3	Numerical Perturbation Calculation	350
12.3.1	Cowell's Method by Recurrence Iteration	350
12.3.2	Encke's method	353
12.4	Analytical Perturbation Calculation	354
12.4.1	Lagrange's Planetary Equations	354
12.4.2	Gravitational Perturbations of First Order	354
12.4.3	Higher-Order Gravitational Perturbations – Triaxiality	357
12.4.4	Lunisolar Perturbations in GEO	362
12.5	Solar Radiation Pressure	365
12.5.1	Effect of Solar Radiation	366
12.5.2	Temporal Evolution of the Orbit	370
12.5.3	Correction Maneuvers	371
12.6	Drag	374
12.6.1	General Considerations	374
12.6.2	Elliptical Orbits	377
12.6.3	Circularization	380
12.6.4	Circular Orbits	381
12.6.5	Orbit Lifetime	383
	Problems	387
<b>13</b>	<b>Coordinate Systems</b>	<b>393</b>
13.1	Space Coordinate Systems	393
13.2	Time Coordinates	399

<b>14</b>	<b>Orbit Determination</b>	<b>403</b>
14.1	Orbit Measurements	403
14.1.1	Radar tracking	403
14.1.2	Other Tracking Systems	405
14.2	Method of Orbit Determination	407
14.3	Orbit Estimation	408
14.3.1	Simple Orbit Estimation	408
14.3.2	Lambert's Method	409
14.4	Conversion of Orbital Elements	412
14.4.1	Transformation $\mathbf{r}, \mathbf{v} \rightarrow a, e, i, \omega, \Omega, \theta$	412
14.4.2	Transformation $a, e, i, \omega, \Omega, \theta \rightarrow \mathbf{r}, \mathbf{v}$	415
14.5	State Vector Propagation	415
14.5.1	Propagation $r, v, \gamma \rightarrow r', v', \gamma'$	416
14.5.2	Propagation $\mathbf{r}, \mathbf{v} \rightarrow \mathbf{r}', \mathbf{v}'$	418
14.5.3	Universal Propagator	419
	Problems	420
<b>15</b>	<b>Rigid Body Dynamics</b>	<b>421</b>
15.1	Fundamental Physics of Rotation	421
15.1.1	Physical Basics	421
15.1.2	Equations of Rotational Motion	428
15.1.3	Reference Frames	429
15.1.4	Translation vs. Rotation	432
15.2	Torque-free Motion	433
15.2.1	Basic Considerations	433
15.2.2	Stability and Nutation	434
15.2.3	Nutation of a Torque-Free Symmetrical Gyro	437
15.2.4	Nutation and Energy Dissipation	440
15.2.5	General Torque-Free Motion	443
15.3	Gyro under External Torque	444
15.4	Gravity-Gradient Stabilization	446
15.4.1	Gravity-Gradient Torque	447
15.4.2	Gravity-Gradient Induced Attitude Changes	448
15.4.3	Stability of Gravity-Gradient Oscillations	449
15.4.4	Pitch Oscillation	450
15.4.5	Coupled Roll-Yaw Oscillation	452

**Appendix**

**A      Astrodynamics Parameters    455**

- A.1    Mean Orbit Radius    455
- A.1.1    Titius–Bode Law    455
- A.1.2    Average over True Anomaly    456
- A.1.3    Time Average    456
- A.2    Mean Orbital Velocity    457
- A.2.1    Average over True Anomaly    457
- A.2.2    Time Average    458

**B      Approximate Analytical Solution for Uneven Staging    459**

**Color Plates    463**

**References    473**

**Index    475**
