

# Index

## Symbols

- (dash) for /var/log/maillog files, 530
- # character
  - host files and, 526
  - Linux configuration files and, 539
  - log files and, 530
- \$HOME, 354
- \$PATH variable, 128–129, 146
- . (dot character) for host files, 526
- / (forward slash) in Linux, 148
- : (colon) character, host files and, 526
- @ (at) symbol
  - host files and, 527
  - log files and, 530
- | (pipe) metacharacter, 135

## Numbers

- 3D desktop effects, 96–98
- 802.11 networks, 576, 577

## A

- absolute paths, 121
- access control in squid.conf, configuring, 648–649
- access points (wireless)
  - basics of, 567–568
  - defined, 577
- access to network services, evaluating, 545–546
- AccessFileName directive (Apache Web server), 786
- access.log file, 652
- ACPI events, monitoring, 388
- Acronis OS Selector, 48

- actions and headers, defining (Apache Web server), 798
- ActiveX and Firefox, 314
- AD (Active Directory), Microsoft, 816
- ad hoc mode (wireless LANs), 584–585
- Adblock Plus add-on (Firefox), 313
- AddEncoding directive (Apache Web server), 797
- AddIcon directives (Apache Web server), 795–796
- AddLanguage directive (Apache Web server), 797
- add-ons, Firefox, 312–314
- Add/Remove Software window (RPM), 176–177
- address book (LDAP)
  - accessing from Thunderbird, 829–831
  - setting up, 822–827
- addresses, IP. *See* IP addresses
- administrative users (MySQL database servers), 848–849
- administrator package (MySQL), 846
- Adobe Acrobat Plug-In, 311
- Advanced Encryption Standard (AES), 549
- Advanced Maryland Automatic Network Disk Archiver. *See* Amanda, configuring
- AES (Advanced Encryption Standard), 549
- agent format (HTTP logging), 790
- AIGLX (Accelerated Indirect GL X project), 96
- algorithms
  - trapdoor, 509
  - (WEP, 588)
- aliases
  - adding (shell), 146–147
  - aliasing relocated content (Apache Web server), 791–792
  - defined, 129
  - file (Sendmail), 735–737

- alien utility, 191
- Allman, Eric, 720
- AllowOverride directive (Apache Web server), 784
- Alpine mail reader, 325
- ALSA (Advanced Linux Sound Architecture), 251
- alsamixer utility, 257
- Amanda, configuring
  - amanda.conf file, 495–497
  - backup commands, 493–494
  - backups, performing, 499
  - directories, 494–495
  - disklist files, 497–498
  - network services, 498
- Analog free log-file analyzer, 813
- anonymous users, uploading files from (vsFTPD), 758
- antennas, selecting, 578–581
- Apache Web server
  - configuring modules/related services, 804–805
  - displaying server information, 808–809
  - displaying server status, 808–810
  - features of, 765
  - httpd, command-line arguments to, 806–807
  - logging errors, 811
  - logging hits, 811–812
  - monitoring activities of, 807–808
  - quick-starting, 766–768
  - server-info/server-status, security of, 810–811
  - starting and stopping, 806–807
  - Test Page, 812
  - traffic, analyzing, 812–813
- Apache Web server, configuring
  - access options/overrides, 782–784
  - actions and headers, defining, 798
  - addresses, binding to specific, 774–775
  - aliasing relocated content, 791–792
  - canonical names, 781–782
  - default index files for directories, 785
  - directory-access control, 786
  - e-mail address, 781
  - encoding and language, defining, 796–797
  - error responses, customizing, 798–800
  - global environment, 769–772
  - hostname lookups, 787
  - HTTP content directories, 782
  - HTTP logging, 788–791
  - HTTP response codes, 799
  - httpd.conf file, 769
  - indexing, defining, 793–796
  - LogFormat, available tokens within, 790
  - MIME types and handlers, 797–798
  - MIME-type default definitions, 787
  - module-specific configuration files, 781
  - proxy and caching services, 801–802
  - redirecting requests for old content, 792–793
  - responses to browsers, 800–801
  - selecting modules in httpd.conf, 775–780
  - server name, setting, 781
  - server PID file, storing, 770–771
  - server processes, setting number of, 772–774
  - server root directory, 770
  - signature lines, 791
  - subcomponents, 770
  - time-out values, 771–772
  - user and group entries, 780
  - user directories, 784–785
  - virtual hosting, 803–804
- applets
  - Gnome, 85–86
  - KDE, 100
- applications
  - application launchers, 86–87
  - Applications menu (Gnome desktop), 77, 84–85
  - OpenOffice.org, 223
  - security and, 506
  - Windows-equivalent, running in Linux, 197–198
- applications, accessing/running
  - basics, 165
  - different formats. *See* Open Source software
  - DOS applications, 207–209
  - overview, 205–207
  - RPM packages, managing. *See* RPM packages

- running with CentOS. *See* applications, running with CentOS
  - software, locating and installing. *See* software virtual environments. *See* virtualization software
  - Windows in Linux. *See under* Windows, Microsoft
  - applications, running with CentOS
    - basics, 195–196
    - desktops, 196–198
    - menus, starting applications from, 198
    - remote X, 201–205
    - from Run Application windows, 198–199
    - from Terminal windows, 199–201
  - archives
    - backup archives, 467–469
    - files, installing (RPM), 180
    - formats, 191, 192
    - pax archiving tool, 499–502
  - ARDI Executor, 207
  - arguments, defined, 126
  - arithmetic expressions, 137
  - arithmetic in shell scripts, 431–432
  - ASCII transfer mode (FTP), 333
  - at jobs, 458–459
  - at.allow/at.deny files, 458
  - atq command, 460
  - atrm command, 460
  - ATrpms, 170
  - attachments, e-mail, 319
  - attacks against servers
    - basic techniques, 536–537
    - denial-of-service attacks, 537–540
    - distributed DOS attacks, 540–544
    - intrusion attacks, 544–548
  - attributes
    - of FTP servers, 752–753
    - object classes (LDAP schemas), 817
  - audio CDs
    - creating with cdrecord, 274
    - creating with K3b, 274–277
  - audio decoders, 251
  - audio files, converting with SoX, 268–271
  - audio players, 259–260
  - audio/video codecs, 287
  - authconfig command, 44
  - authentication
    - BIND and, 894
    - enabling, 33
    - passwordless, 535–536
    - self -signed certificates and, 552–553
    - VPNs, 564
  - authoritative answer (AA) bits, 891
  - authoritative zones (DNS servers), 891
  - autofs to mount NFS file systems, 693–694
  - AutoHide feature (Gnome desktop), 88
  - AWStats (Advanced Web Statistics) tool, 814
- ## B
- backgrounds
    - background commands (shell), 136
    - background/foreground processes (shell), 141–143
    - desktop, 74–75, 91
  - backups, 467–503
    - Amanda for. *See* Amanda, configuring
    - automating with cron daemon, 487–488
    - backed-up files, restoring, 488–493
    - backup archives, 467–469
    - backup script example (shell scripts), 441
    - BackupPC, 472
    - of databases, 875
    - with dump command, 483–486
    - media for. *See* media for backups
    - multiple partitions and, 368
    - pax archiving tool, 499–502
    - rsync for, 469–472
    - strategy for, 472–474
    - tools, 472
  - Bacula tool, 472
  - bash command
    - initial logins and, 405
    - options, configuring, 407
  - bash shell, 125, 430–431
  - .bash\_profile file, 406

## B Index

- .bashrc file, 405, 406
  - batch command (system tasks), 461
  - bc command, 431–432
