Preface	ix
1 Galaxies in the universe	1
1.1 Introduction	1
1.2 A brief history of galaxies	2
1.3 Distance measurements	5
1.4 Redshifts, distances and dynamics	9
1.5 Expansion of the universe	10
1.6 Hubble's constant and the distance scale	12
1.7 The observable universe	16
2 A galaxy menagerie	19
2.1 Morphological types	19
2.2 Luminosities and sizes	21
2.3 Surface brightness	24
2.4 Surface brightness profiles	26
2.5 Apparent sizes	28
2.6 The luminosity function	30
2.7 Redshift surveys	33
2.7.1 Galactic extinction	33
2.7.2 k-corrections	36
2.7.3 Volume densities	36
2.8 Galaxies at all wavelengths	39
2.9 Active galaxies	41
2.10 Galaxy environments	41
3 Elliptical and lenticular galaxies	45
3.1 Numbers	45
3.2 Surface brightness laws	47
3.3 Shapes	52
3.4 Stellar populations	55
3.4.1 Stellar lifetimes	57
3.4.2 Stellar population evolution	58
3.4.3 Surface brightness fluctuations	61
3.5 Metallicity	61
3.6 Globular clusters	64
3.7 Hot gas	64

vi Contents

3.8	Dynamics	66
3.8.1	Rotation	67
3.8.2	The virial theorem	69
3.9	The Faber–Jackson relation and the fundamental plane	71
3.9.1	Peculiar velocities	72
3.9.2	Mass-to-light ratios	73
3.10	Mergers	75
3.10.1	Gravitational interactions	78
3.10.2	Timescales	81
3.11	Elliptical galaxy masses	83
3.12	Massive black holes	86
4	Spiral galaxies	87
4.1	Shapes and sizes	87
4.1.1	Spiral arms	89
4.1.2	Surface brightnesses	91
4.1.3	Numbers	94
4.2	Vertical structure	95
4.2.1	Thin and thick discs	96
4.2.2	Surface densities	97
4.3	Rotation	98
4.3.1	Oort’s constants	100
4.3.2	Epicyclic motions	102
4.3.3	The velocity ellipsoid	105
4.4	Stellar populations	105
4.4.1	Colours	108
4.4.2	The initial mass function	109
4.5	The interstellar medium	110
4.5.1	HI	111
4.5.2	Other constituents of the ISM	113
4.6	Neutral gas	114
4.6.1	HI observations	116
4.6.2	The HI and HII distributions	118
4.7	Ionised gas	120
4.8	ISM structure	122
4.8.1	Magnetic fields	123
4.8.2	The radio LF	125
4.8.3	Cosmic rays	125
4.9	Dust	126
4.9.1	Reddening	128
4.9.2	Optical depths	129
4.10	Spiral structure	131
4.10.1	Density waves	132
4.10.2	Bars	134
4.11	Star formation	134
4.11.1	The Jeans mass	135
4.12	Global star formation	137
4.12.1	Emission lines	137

4.12.2	Other star formation indicators	138
4.12.3	Densities and timescales	141
4.13	Chemical evolution	144
4.13.1	Closed box models	144
4.13.2	Gas flows	147
4.13.3	Radial gradients	150
4.14	Rotation of the gas	151
4.14.1	Rotation of gas in the Galaxy	154
4.15	The Tully–Fisher relation	155
4.16	The Galactic halo	158
4.17	The Galactic Centre	160
5	Irregulars, dwarfs and LSBGs	165
5.1	Local Group members	166
5.2	Irregulars	167
5.2.1	Metallicities	169
5.3	Early type dwarfs	172
5.3.1	Galactic winds	174
5.4	Star formation histories	176
5.5	Interactions	177
5.6	Interconnections	181
5.7	Low surface brightness discs	182
5.8	Numbers and selection effects	183
5.9	Dwarf galaxies in the past	186
6	Active galaxies	189
6.1	The discovery of AGN	189
6.2	AGN structure	194
6.2.1	Accretion discs	195
6.2.2	Broad line clouds and the molecular torus	196
6.2.3	Timescales	198
6.2.4	LINERs	199
6.3	Radio galaxies	200
6.4	Synchrotron emission	203
6.4.1	Energy loss rates	205
6.4.2	Acceleration processes	207
6.4.3	Energy densities	209
6.5	Jets and superluminal motion	211
6.6	Unification	212
7	Clusters and clustering	215
7.1	The distribution of galaxies	215
7.2	Rich clusters	216
7.3	Cluster masses	218
7.3.1	Virial masses	219
7.3.2	Gravitational lensing	221
7.3.3	X-ray clusters	225
7.3.4	X-ray luminosities	226

viii Contents

7.4	Cluster searches	227
7.5	Galaxy groups	229
7.6	Intergalactic matter	232
7.7	Large-scale structure	234
7.8	Clustering statistics	237
	7.8.1 Correlation functions	237
	7.8.2 Limber's formula	239
	7.8.3 Clustering lengths	241
	7.8.4 The power spectrum	242
7.9	Velocities	243
8	Galaxy evolution	247
8.1	Looking back	247
8.2	Redshift and distance	248
	8.2.1 Observable distances	250
8.3	Cosmological models	252
	8.3.1 The density parameter	253
	8.3.2 The cosmic scale factor	255
	8.3.3 Distance revisited	258
8.4	The Hubble diagram	259
	8.4.1 Evolutionary corrections	260
8.5	Galaxy colours, photometric redshifts and LBGs	263
	8.5.1 Drop-outs	265
	8.5.2 FIR and sub-millimetre sources	265
8.6	Number counts	266
	8.6.1 Evolution again	267
	8.6.2 Faint blue galaxies	270
	8.6.3 Radio source counts	270
	8.6.4 Quasars	271
8.7	The night sky brightness	272
	8.7.1 Metal production	274
	8.7.2 QSO absorption lines	274
8.8	The star formation history of the universe	276
	8.8.1 Star formation models	277
	8.8.2 Star formation at high z	279
8.9	Reionisation and the first stars	281
8.10	Galaxy formation theory	281
8.11	Further developments	284
	Appendix: The magnitude system	285
	Figure credits	289
	Bibliography	295
	Index	299
