Foreword to the Revised Edition *ix*

Preface to the Revised Edition *xi*

Preface *xix*

I SOURCE-FIELD RELATIONS SINGLE ANTENNA ELEMENTS 1

1 The Far-Field Integrals, Reciprocity, Directivity 3

1.1 Introduction 3

1.2 Electrostatics and Magnetostatics in Free Space 4

1.3 The Introduction of Dielectric, Magnetic, and Conductive Materials 7

1.4 Time-Varying Fields 10

1.5 The Retarded Potential Functions 11

1.6 Poynting's Theorem 13

1.7 The Stratton-Chu Solution 17

1.8 Conditions at Infinity 21

1.9 Field Values in the Excluded Regions 25

1.10 The Retarded Potential Functions: Reprise 26

1.11 The Far Field: Type I Antennas 27

1.12 The Schelkunoff Equivalence Principle 31

1.13 The Far Field: Type IL Antennas 36

1.14 The Reciprocity Theorem 39

1.15 Equivalence of the Transmitting and Receiving Patterns of an Antenna 41

1.16 Directivity and Gain 46

1.17 Receiving Cross Section 48

1.18 Polarization of the Electric Field 53

2 Radiation Patterns of Dipoles, Loops, and Helices 58

2.1 Introduction 58

2.2 The Center-Fed Dipole 58

2.3 Images in a Ground Plane 65

2.4 A Monopole Above a Ground Plane 67

2.5 A Dipole in Front of a Ground Plane 68

2.6	The Small Current Loop	69
2.7	Traveling Wave Current on a Loop	71
2.8	The End-Fire Helix	73
3	Radiation Patterns of Horns, Slots and Patch Antennas	79
3.1	Introduction	79
3.2	The Open-Ended Waveguide	79
3.3	Radiation from Horns	83
3.4	Center-Fed Slot in Large Ground Plane	86
3.5	Waveguide-Fed Slots	88
3.6	Theory of Waveguide-Fed Slot Radiators	91
3.7	Patch Antennas	99
II	ARRAY ANALYSIS AND SYNTHESIS	111
4	Linear Arrays: Analysis	113
4.1	Introduction	113
4.2	Pattern Formulas for Arrays with Arbitrary Element Positions	114
4.3	Linear Arrays: Preliminaries	117
4.4	Schelkunoff's Unit Circle Representation	128
5	Linear Arrays: Synthesis	141
5.1	Introduction	141
5.2	Sum and Difference Patterns	142
5.3	Dolph-Chebyshev Synthesis of Sum Patterns	143
5.4	Sum Pattern Beamwidth of Linear Arrays	148
5.5	Peak Directivity of the Sum Pattern of a Linear Array	153
5.6	A Relation Between Beamwidth and Peak Directivity for Linear Arrays	157
5.7	Taylor Synthesis of Sum Patterns	157
5.8	Modified Taylor Patterns	162
5.9	Sum Patterns with Arbitrary Side Lobe Topography	165
5.10	Discretization of a Continuous Line Source Distribution	172
5.11	Bayliss Synthesis of Difference Patterns	181
5.12	Difference Patterns with Arbitrary Side Lobe Topography	185
5.13	Discretization Applied to Difference Patterns	187
5.14	Design of Linear Arrays to Produce Null-Free Patterns	190
6	Planar Arrays: Analysis and Synthesis	196
6.1	Introduction	196
6.2	Rectangular Grid Arrays: Rectangular Boundary and Separable Distribution	197
6.3	Circular Taylor Patterns	213
6.4	Modified Circular Taylor Patterns: Ring Side Lobes of Individually Arbitrary Heights	218
6.5	Modified Circular Taylor Patterns: Undulating Ring Side Lobes	221
6.6	Sampling Generalized Taylor Distributions: Rectangular Grid Arrays	225

- 6.7 Sampling Generalized Taylor Distributions: Circular Grid Arrays 230
- 6.8 An Improved Discretizing Technique for Circular Grid Arrays 233
- 6.9 Rectangular Grid Arrays with Rectangular Boundaries: Nonseparable Tseng-Cheng Distributions 237
- 6.10 A Discretizing Technique for Rectangular Grid Arrays 243
- 6.11 Circular Bayliss Patterns 250
- 6.12 Modified Circular Bayliss Patterns 256
- 6.13 The Discretizing Technique Applied to Planar Arrays Excited to Give a Difference Pattern 256
- 6.14 Comparative Performance of Separable and Nonseparable Excitations for Planar Apertures 261
- 6.15 Fourier Integral Representation of the Far Field 265

III SELF-IMPEDANCE AND MUTUAL IMPEDANCE, FEEDING STRUCTURES 275

7 Self-Impedance and Mutual Impedance of Antenna Elements 277

- 7.1 Introduction 277
- 7.2 The Current Distribution on an Antenna: General Formulation 278
- 7.3 The Cylindrical Dipole: Arbitrary Cross Section 281
- 7.4 The Cylindrical Dipole: Circular Cross Section, Hallén's Formulation 284
- 7.5 The Method of Moments 286
- 7.6 Solution of Hallén's Integral Equation: Pulse Functions 287
- 7.7 Solution of Hallén's Integral Equation: Sinusoidal Basis Functions 294
- 7.8 Self-Impedance of Center-Fed Cylindrical Dipoles: Induced EMF Method 297
- 7.9 Self-Impedance of Center-Fed Cylindrical Dipoles: Storer's Variational Solution 305
- 7.10 Self-Impedance of Center-Fed Cylindrical Dipoles: Zeroth and First Order Solutions to Hallén's Integral Equation 308
- 7.11 Self-Impedance of Center-Fed Cylindrical Dipoles: King-Middleton Second-Order Solution 314
- 7.12 Self-Impedance of Center-Fed Strip Dipoles 321
- 7.13 The Derivation of a Formula for the Mutual Impedance Between Slender Dipoles 325
- 7.14 The Exact Field of a Dipole: Sinusoidal Current Distribution 329
- 7.15 Computation of the Mutual Impedance Between Slender Dipoles 332
- 7.16 The Self-Admittance of Center-Fed Slots in a Large Ground Plane: Booker's Relation 336
- 7.17 Arrays of Center-Fed Slots in a Large Ground Plane: Self-Admittance and Mutual Admittance 342
- 7.18 The Self-Impedance of a Patch Antenna 344

8 The Design of Feeding Structures for Antenna Elements and Arrays 351

- 8.1 Introduction 351
- 8.2 Design of a Coaxially Fed Monopole with Large Ground Plane 352
- 8.3 Design of a Balun-Fed Dipole Above a Large Ground Plane 355
- 8.4 Two-Wire-Fed Slots: Open and Cavity-Backed 359

- 8.5 Coaxially Fed Helix Plus Ground Plane 361
- 8.6 The Design of an Endfire Dipole Array 363
- 8.7 Yagi-Uda Type Dipole Arrays: Two Elements 368
- 8.8 Yagi-Uda Type Dipole Arrays: Three or More Elements 373
- 8.9 Frequency-Independent Antennas: Log-Periodic Arrays 375
- 8.10 Ground Plane Backed Linear Dipole Arrays 386
 - 8.11 Ground Plane Backed Planar Dipole Arrays 390
- 8.12 The Design of a Scanning Array 393
- 8.13 The Design of Waveguide-Fed Slot Arrays: The Concept of Active Slot Admittance (Impedance) 397
- 8.14 Arrays of Longitudinal Shunt Slots in a Broad Wall of Rectangular Waveguides: The Basic Design Equations 402
- 8.15 The Design of Linear Waveguide-Fed Slot Arrays 407
- 8.16 The Design of Planar Waveguide-Fed Slot Arrays 414
- 8.17 Sum and Difference Patterns for Waveguide-Fed Slot Arrays; Mutual Coupling Included 418

IV CONTINUOUS APERTURE ANTENNAS 427

9 Traveling Wave Antennas 429

- 9.1 Introduction 429
- 9.2 The Long Wire Antenna 430
- 9.3 Rhombic and Vee-Antennas 432
- 9.4 Dielectric-Clad Planar Conductors 437
- 9.5 Corrugated Planar Conductors 440
- 9.6 Surface Wave Excitation 442
- 9.7 Surface Wave Antennas 446
- 9.8 Fast Wave Antennas 453
- 9.9 Trough Waveguide Antennas 464
- 9.10 Traveling Wave Arrays of Quasi-Resonant Discretely Spaced Slots [Main Beam at $\theta_0 = \arccos(\beta/k)$] 467
- 9.11 Traveling Wave Arrays of Quasi-Resonant Discretely Spaced Slots (Main Beam Near Broadside) 474
- 9.12 Frequency Scanned Arrays 476

10 Reflectors and Lenses 482

- 10.1 Introduction 482
- 10.2 Geometrical Optics: The Eikonal Equation 483
- 10.3 Simple Reflectors 490
- 10.4 Aperture Blockage 495
- 10.5 The Design of a Shaped Cylindrical Reflector 498
- 10.6 The Design of a Doubly Curved Reflector 504
- 10.7 Radiation Patterns of Reflector Antennas: The Aperture Field Method 508
- 10.8 Radiation Patterns of Reflector Antennas: The Current Distribution Method 518
- 10.9 Dual Shaped Reflector Systems 521

- 10.10 Single Surface Dielectric Lenses 525
- 10.11 Stepped Lenses 529
- 10.12 Surface Mismatch, Frequency Sensitivity, and Dielectric Loss for Lens Antennas 532
- 10.13 The Far Field of a Dielectric Lens Antenna 534
- 10.14 The Design of a Shaped Cylindrical Lens 536
- 10.15 Artificial Dielectrics: Discs and Strips 538
- 10.16 Artificial Dielectrics: Metal Plate (Constrained) Lenses 542
- 10.17 The Luneburg Lens 545

APPENDICES 557

- A. Reduction of the Vector Green's Formula for E 559
 - B. The Wave Equations for A and D 562
 - C. Derivation of the Chebyshev Polynomials 564
 - D. A General Expansion of $\cos^m \nu$ 567
 - E. Approximation to the Magnetic Vector Potential Function for Slender Dipoles 569
 - F. Diffraction by Plane Conducting Screens: Babinet's Principle 573
 - G. The Far-Field in Cylindrical Coordinates 581
 - H. The Utility of a $\text{Csc}_2 \theta$ Pattern 585
- Index 587
