

Contents

Introductionxxiii

Part 1 • Standard Windows Utilities 1

Chapter 1 • Using the Command Line Effectively 3

Understanding Why the Command Line Is So Important 4

The Command Line Made Easy 6

 Using Utilities Directly 6

 Writing Scripts 8

 Scheduling Tasks 8

 Relying on Third Party Utilities 8

Viewing the Commands by Purpose 8

 Data Specific 9

 System Status 9

 File and Resource Management 10

 Security and System Monitoring 10

 Developer and Low-level Tasks 10

 Active Directory 11

 Services 11

 Task Scheduling 12

Updating Your Current Utilities at the Microsoft Download Center 12

Configuring the Command Window 12

 Setting the Window Options 13

 Changing the Font 14

 Choosing a Window Layout 14

 Defining the Text Colors 14

 Placing a Command Prompt at Your Fingertips 15

Understanding Internal Commands 17

Vista Changes for the Command Line 17

 Understanding User Account Control (UAC) Changes 17

 Overcoming UAC Problems 18

 Giving Yourself Permission 18

 Setting Vista Zones on Network Drives 19

 Understanding Vista Doesn't Support Old Commands 20

Getting Started with Command Line Tasks 20

Chapter 2 • Completing Data-Specific Tasks 23

Creating and Modifying Data Files and Directories 24

 Opening Remote Directories with the Append Utility 24

 Copying Files with the *Copy* Command 25

 Removing Files with the *Del* and *Erase* Commands 27

Removing a Directory Tree with the <i>DelTree</i> Command	28
Modifying Files with the Edlin Utility	29
Repairing System Databases with the ESEnTutl Utility	30
Decompressing Files with the Expand Utility	34
Creating Directories with the <i>MD</i> and <i>MkDir</i> Commands	35
Moving Files and Renaming Files and Directories with the <i>Move</i> Command	36
Setting and Viewing Application Paths with the <i>Path</i> Command	37
Storing and Retrieving Directories with the <i>PushD</i> and <i>PopD</i> Commands	38
Recovering Lost Files with the Recover Utility	39
Removing a Directory with the <i>RD</i> and <i>Rmdir</i> Commands	39
Renaming a File or Directory with the <i>Ren</i> and <i>Rename</i> Commands	40
Replacing Existing Files with the Replace Utility	40
Sorting File Content with the Sort Utility	41
Associating a Folder to a Drive with the Subst Utility	43
Displaying a Directory Structure with the Tree Utility	44
Validating File Operations with the <i>Verify</i> Command	45
Performing Bulk File Transfers with the XCopy Utility	45
Performing Robust File Transfers with the RoboCopy Utility	47
Displaying Data Files	54
Working with Line Printers	54
Printing Data Files with the Print Utility	56
Outputting Data Files with the <i>Type</i> Command	57
Performing a Formatted Printout with Notepad	60
Determining File and Directory Status	61
Determining the Current Directory and Changing Directories with the <i>CD</i> and <i>ChDir</i> Commands	61
Comparing Two Files with the Comp Utility	62
Performing Advanced File Comparison with the FC Utility	62
Working with File Associations and Types	64
Taking Ownership of Files with the TakeOwn Utility	65
Performing Backups with the NTBackup Utility	66
Performing Backups with the WBAdmin Utility	68
Start Backup	69
Get Items	69
Working with ODBC Data Sources	70
Configuring the ODBC Environment with the ODBCConf Utility	70
Creating an ODBC Data Source at the Command Line	72
Managing the Windows Registry	72
Modifying the Registry with the RegEdit Utility	73
Scripting Registry Entries with the RegIni Utility	74
Adding and Removing Servers with the RegSvr32 Utility	74
Getting Started with Command Line Tasks	75
Chapter 3 • Discovering the System Status	77
Getting System Status Information	77
Obtaining Driver Information with the DriverQuery Utility	78
Obtaining DirectX Status with the DXDiag Utility	79

Monitoring the File System with the FSUtil Utility	80
Managing Volume Labels with the Label Utility	92
Determining Memory Status with the Mem Utility	92
Obtaining General System Information with the MSInfo32 Utility	93
Managing Environment Variables with the Set Command	96
Managing Environment Variables with the SetX Utility	98
Determining the Operating System Version with the Ver Command	100
Getting Volume Information with the Vol Command	100
Viewing the Volume Shadow Service Data with the VSSAdmin Utility	100
Working with Plug and Play (PnP)	101
Performing Unattended Driver Installation with the PnPUnattend Utility	101
Managing PnP Setups Using the PnPUtil Utility	101
Recording System Status Information	102
Managing System Events with the EventCreate Utility	102
Triggering System Events with the EventTriggers Utility	104
Managing Event Information with the WEvtUtil Utility	106
Working with Performance Information	111
Adding Performance Counters with the LodCtr Utility	111
Managing Performance Logs and Alerts with the LogMan Utility	112
Viewing the Results of Changes with the PerfMon Utility	116
Reconfiguring Performance Logs with the ReLog Utility	116
Tracking Performance with the TypePerf Utility	118
Removing Performance Counters with the UnlodCtr Utility	119
Assessing Your System with the WinSAT Utility	119
Getting Started with Command Line Tasks	120
Chapter 4 • Locating Files and Other Resources	121
Locating Files	121
Finding Files and Directories with the Dir Command	122
Finding Files and Directories with the Where Utility	124
Detecting Shared Open Files with the OpenFiles Utility	124
Locating Information in Files with the Find and FindStr Utilities	127
Monitoring Files	129
Changing File and Directory Attributes with the Attrib Utility	130
Changing File and Directory Access with the CACLs Utility	132
Changing File and Directory Access with the ICACLs Utility	134
Determining File and Directory Status with the ChkDsk Utility	136
Performing Boot Time Disk Checks with the ChkNTFS Utility	137
Encrypting Data with the Cipher Utility	139
Compressing Data with the Compact Utility	141
Working with Other Resources	143
Converting Program Groups with the GrpConv Utility	143
Managing Power Settings with the PowerCfg Utility	143
Working with Terminal Server	148
Obtaining Session Status Information with the Query Utility	153
Working with Remote Access Server	155
Setting Up a Telephony Client with the TCMSetup Utility	157

Communicating with Telnet	158
Managing the System Time with the W32Tm Utility	161
Getting Started with Command Line Tasks	165
Chapter 5 • Securing and Monitoring a System	167
Working with the Network	168
Managing the ATM Call Manager with the ATMAdm Utility	168
Getting the Media Access Control Information with the GetMAC Utility	168
Getting the NetWare Routing Information with the IPXRoute Utility	169
Managing WinHTTP Proxy Configuration with the ProxyCfg Utility	170
Managing the Network with the Net Utility	171
Discovering TCP/IP Diagnostic Tools	184
Managing FTP Servers with the FTP Utility	208
Working with Users	209
Monitoring Users with the AuditUsr Utility	210
Configuring Profiles the CMStP Utility	211
Obtaining Group Policy Results with the GPResult Utility	212
Managing Group Policies with the GPUdate Utility	213
Sending Messages with the Msg Utility	214
Auditing User Access with the AuditPol Utility	214
Obtaining User Login Information with the QUser Utility	218
Discovering User Identity with the WhoAmI Utility	218
Virus and External Intrusion Protection	219
Removing Viruses with the BlastCln Utility	220
Managing the File System with the FltMC Utility	221
Detect and Remove Malicious Software with the MRT Utility	223
Verifying System Files with the SFC Utility	223
Verifying Drivers with the Verifier Utility	224
Configuring the System Setup	226
Managing the Boot Configuration with the BootCfg Utility	226
Managing the Boot Configuration with BCDEdit in Vista	228
Accessing the WinPE Network Installer with the NetCfg Utility	232
Accessing the Windows Package Manager with the PkgMgr Utility	232
Configuring Local Security Policies with the SecEdit Utility	233
Adding and Removing Applications with the SysOCMgr Utility	235
Adding and Removing Applications with the OCSetup Utility	235
Getting System Configuration Information with the SystemInfo Utility	236
Interacting with the Internet	237
Converting IIS Logs with the ConvLog Utility	237
Monitoring and Managing IIS with the IISReset Utility	238
Working with IP Version 6	238
Working with General Applications	240
Terminating Tasks with the TaskKill Utility	240
Listing Applications and Services with the TaskList Utility	242
Converting Event Trace Logs with the TraceRpt Utility	243
Perform System Diagnostics with DispDiag	245
Getting Started with Command Line Tasks	245

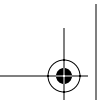

Chapter 6 • Using Developer and Low-Level Utilities	247
Working with Automated System Recovery	248
Backing Up and Restoring System Data with the ASR_Fmt Utility	249
Working with Logical Disks Using the ASR_LDM Utility	250
Working with Protected Files Using the ASR_PFU Utility	251
Using the <i>Start</i> Command	251
Performing Disk Maintenance	253
Managing Removable Storage with the RSM Utility	253
Converting FAT Partitions to NTFS with the Convert Utility	259
Improving Disk Access Performance with the Defrag Utility	260
Compressing Files with the Diantz and MakeCAB Utilities	261
Managing Partitions with the DiskPart Utility	262
Mounting a Volume with the MountVol Utility	267
Managing Disk Performance with the DiskPerf Utility	268
Managing RAID Setups Using the DiskRAID Utility	269
Employing Low-Level Utilities	269
Examining, Modifying, and Debugging Files with the Debug Utility	269
Converting Executables with the Exe2Bin Utility	270
Ensuring Proper Application Execution with the ForceDOS Utility	270
Terminating a Session Using the Logoff Utility	271
Performing System-Level Debugging with the NTSD Utility	271
Managing Compatibility Databases with SDBInst	275
Accessing Functions within DLLs	276
Uninstalling the Operating System with the OSUninst Utility	277
Controlling Services with the SC Utility	278
Shutting Down the System with the ShutDown Utility	282
Replicating COM+ Applications with the COMRepl Utility	284
Managing Type Libraries with the RegTLib Utility	284
Saving and Restoring System Restore Data with the SRDiag Utility	285
Performing Web-Based Enterprise Management Tasks	285
Administering Managed Object Format Files with the MOFComp Utility	286
Interacting with the WBEM Server with the WinMgmt Utility	287
Tracing WinSxS Behavior with the SxSTrace Utility	288
Getting Started with Command Line Tasks	288
Part 2 • Using Windows Automation	289
Chapter 7 • Creating CMD and BAT Files	291
Starting the Command Interpreter	291
Using the CMD Switches	292
Modifying <i>Config.NT</i>	297
Modifying <i>AutoExec.NT</i>	301
Modifying Application Behavior Using a PIF	305
Defining Application Compatibility with the SetVer Utility	308
Using Common DOS Utilities	309
Working at the Command Prompt	316
Redirecting Command Line Output to the Clipboard with the Clip Utility	316
Clearing the Display with the <i>CLS</i> Command	316

Managing User Names and Passwords with CmdKey	317
Changing Screen Colors with the <i>Color</i> Command	318
Working with the System Date Using the <i>Date</i> Command	319
Tracking Command Line Actions with the DosKey Utility	319
Obtaining Command Line Help with the Help Utility	321
Working with the System Time Using the <i>Time</i> Command	321
Changing the Command Window Title with the <i>Title</i> Command	322
Creating Batch Files	322
Using the <i>Call</i> Command	323
Using the <i>Choice</i> Command	324
Using the <i>Echo</i> Command	326
Using the <i>Exit</i> Command	327
Using the <i>ForFiles</i> Utility	327
Using the <i>For</i> Command	328
Using the <i>Goto</i> Command	330
Using the <i>If</i> Command	331
Using the <i>Pause</i> Command	334
Using the <i>Prompt</i> Command	334
Using the <i>Rem</i> Command	335
Using the <i>Shift</i> Command	335
Using the TimeOut Utility	335
Using the WaitFor Utility	336
Getting Started with Command Line Tasks	336
Chapter 8 • Working with Scripts	339
Understanding Scripting Languages	339
Learning the Basics of JavaScript	340
Learning the Basics of VBScript	341
Executing Scripts	342
Running Scripts with the CScript and WScript Utilities	342
Configuring the Host and Property Page Options	344
Scripting Networking Solutions with the NetSH Utility	344
Creating a Basic Script	349
Scripting the Command Line and System Environment	350
Scripting the Registry	352
Using the Scripting Objects	354
Working with the WScript Object	355
Working with the WScript.WshArguments Object	356
Working with the WScript.WshShell Object	356
Working with the WScript.WshNetwork Object	358
Impersonating a User with the RunAs Utility	359
Changing the Environment	360
Changing Logons, Ports, and Users with the Change Utility	360
Enabling or Disabling Session Logons with the ChgLogon Utility	361

Listing COM Port Mappings Using the ChgPort Utility	361
Modifying the Install Mode with the ChgUsr Utility	361
Getting Started with Command Line Tasks	361
Chapter 9 • Scripting for Active Directory	363
Discovering Helpful Active Directory Utilities	364
Managing Active Directory with the DSQuery Utility	365
Managing the Active Directory Database with the NTDSUtil Utility	371
Working with Objects	373
Creating New Objects Using the DSAdd Utility	373
Listing Objects Using the DSGet Utility	378
Editing Existing Objects Using the DSMod Utility	382
Moving Existing Objects Using the DSMove Utility	382
Deleting Objects Using the DSRm Utility	383
Working with Users, Groups, and Computers	383
Obtaining a User's Logon Name	384
Obtaining a User's Full Name	384
Discovering User Group Membership	384
Resetting a User's Password	385
Displaying a List of Hostnames	385
Getting Started with Command Line Tasks	385
Chapter 10 • Using Task Scheduler Effectively	387
Starting and Stopping the Task Scheduler Service	388
Managing Tasks with the SchTasks Utility	389
Working with the AT Utility	395
Combining the AT Utility with Batch Files	396
Creating Script-Based Scheduler Activities	398
Getting Started with Command Line Tasks	401
Chapter 11 • After Hours Automation Scripting	403
Defining After Hours Task Candidates	403
Creating Message Queue Backups with the MQBkup Utility	405
Installing Applications with the MSIExec Utility	405
Designing and Testing the After Hours Batch File	409
Adding Debug Information to Batch Files	409
Identifying Batch Files and Their Actions	413
Using a Centralized Data Store	415
Designing and Testing the After Hours Script	417
Mapping a Network Drive	417
Creating a CSV File	420
Remote System Management	424
Creating Remote Connections with the MSTSC Utility	424
Performing Remote Windows Management with the WinRM Utility	425
Accessing a System with the WinRS Utility	428
Providing Fault Tolerance for an After Hours Batch or Script	429
Getting Started with Command Line Tasks	431

Part 3 • Relying on Third Party Automation	433
Chapter 12 • Obtaining Command Prompt Enhancers	435
Using XVI32 to View Files in Depth	435
Moving Data with Send To Toys	438
Checking File Integrity Using FCIV	439
Getting the Better XCopy with XXCopy	443
Working with Shell Extensions Using ShellExView	443
Examining Processes Using Process Explorer	445
Getting Started with Command Line Tasks	447
Chapter 13 • Increasing Productivity at the Command Line.	449
Obtaining Additional Information with ToggIt Command Line Helper	450
Using Quick Shutdown to End a Session Fast	451
Creating a Friendlier Interface with PromptPal	453
Getting a More Functional Command Line with WinOne	454
Automating Email Using sendEmail	455
Viewing XML Files Using XML Notepad 2007	458
Getting Started with Command Line Tasks	459
Chapter 14 • Editing and Compiling Batch Files and Scripts	461
Editing All File Types with WinVi	461
Obtaining a Better Notepad with Notepad+	463
Creating Executable Batch Files with Batch File Compiler 5.2	465
Develop and Compile Batch Files with Quick Batch File Compiler	466
Understanding JavaScript and VBScript Compilers	467
Understanding the JSC Compiler Supplied with .NET	469
Using the JSC Compiler	469
Creating a Simple Example	472
Working with the .NET Framework	472
Getting Started with Command Line Tasks	473
Part 4 • Working with the .NET Framework Utilities	475
Chapter 15 • Understanding the .NET Framework Versions	477
Locating the .NET Framework on Your System	478
Understanding the Concept of Side-by-Side Versions	481
Viewing the Assembly Folder	484
Discovering the Essential .NET Framework Assemblies	486
Getting Started with Command Line Tasks	488
Chapter 16 • Configuring the .NET Framework	489
Understanding .NET Framework Configuration	489
Working with the Global Assembly Cache	490
Understanding .NET Security	490

Working with Code Groups	494
Creating and Defining Permission Sets	495
Defining Policy Assemblies	496
Adding Configured Applications	496
Understanding the Use of CONFIG Files	497
Setting Policies Using the CASPol Utility	499
Placing Assemblies in the Global Assembly Cache with GACUtil	502
Installing Assemblies with the InstallUtil Utility	504
Registering Assemblies with the RegAsm Utility	505
Registering Services with the RegSvcs Utility	505
Using the .NET Framework 3.0 Utilities	506
Configuring COM+ Applications with the ComSvcConfig Utility	506
Installing and Configuring Windows Communication Foundation	
Using the ServiceModelReg Utility	508
Interacting with WS-AtomicTransaction Using the WSATConfig Utility	509
Getting Started with Command Line Tasks	510
Chapter 17 • Configuring ASP.NET	513
Locating ASP.NET Errors	513
Fixing Application Registration Errors	514
Fixing File Association Problems	514
Fixing Configuration Problems	517
Creating Web Applications with the ASPNet_Compiler Utility	518
Providing Multiple Browser Support with the ASPNet_RegBrowsers Utility	519
Adding ASP.NET Support to IIS with the ASPNet_RegIIS Utility	520
Adding ASP.NET Support to SQL Server with the ASPNet_RegSQL Utility	523
Using the Command Line	524
Working with the ASPNet_RegSQL Utility Wizard	526
Understanding the ASPNet_State Service	527
Getting Started with Command Line Tasks	528
Part 5 • Windows Vista Special Features Preview	529
Chapter 18 • Using Windows PowerShell.	531
An Overview of Windows PowerShell	531
Why Use the Windows PowerShell?	532
Downloading and Installing Windows PowerShell	533
Understanding the Windows PowerShell Difference	533
Using the New Windows PowerShell Commands	536
Getting Started with Command Line Tasks	546
Chapter 19 • Working with Windows PowerShell.	547
Using the PS Command Interpreter	548
Creating a Shell Extension with the Make-Shell Utility	550
Creating a Windows PowerShell Script	552
Creating a Simple Script	553
Running the Script	556

Creating a Windows PowerShell Cmdlet and Shell 558
 Creating the Cmdlet Code 558
 Compiling the Cmdlet Executable 560
 Using the Make-Shell Utility to Create the Shell 561
 Getting Started with Command Line Tasks 562

Appendix A • 52 Indispensable Command Line Tricks and Techniques 563

Appendix B • A Summary of New and Modified Commands in Vista 569

Glossary 575

Index 597
