PART I INTRODUCTION

Chapter 1 Creation and Development of Thermoplastic Elastomers, and Their Position Among Organic Materials

E. Maréchal

1. Birth and development of TPEs: a brief survey	3
2. Main routes to thermoplastic elastomer preparation	5
2.1. Living anionic polymerization	6
2.2. Living cationic polymerization	6
2.3. Controlled radical polymerization	7
2.4. Polycondensation and polyaddition	7
2.5. Chemical modification and grafting	8
2.6. Preparation by blending	9
2.7. Preparation by dynamic vulcanization	9
3. Techniques used in the characterization of TPEs	10
3.1. Chromatography	10
3.2. Spectrometric techniques	11
3.3. Scattering techniques	12
3.4. Microscopies	13
3.5. Controlled degradation	13
3.6. Thermal techniques	13
4. Properties and processing of TPEs	14
4.1. Injection molding	14
4.2. Compression molding	14
4.3. Extrusion	14
4.4. Blow processings	15
4.5. Thermoforming	15
4.6. Reactive processings	15
4.7. Degradation in processing	15

5. Position of TPEs among organic materials and their applications	15
6. Future trends	18
References	20

Chapter 2 Polycondensation Reactions in Thermo- plastic Elastomer Chemistry: State of the Art, Trends, and Future Developments

E. Maréchal

1. Introduction	33
2. Preparation of block copolymers by polycondensation. A critical review	34
2.1. General considerations	34
2.2. Direct polycondensation of α,ω -difunctional oligomers	34
2.3. Polycondensation of an α,ω -difunctional oligomer with the precursors of another block	38
2.4. Oligomer-coupling reactions	42
2.5. Characterization techniques. Side reactions	46
3. New structures	50
3.1. Block copolymers containing liquid crystalline structures	50
3.2. Liquid crystalline sequences as part of the backbone	50
3.3. Liquid crystalline sequences as side chains	52
3.4. Metallo-supramolecular block copolymers	55
3.5. Block copolymers prepared from metal-containing macrocycles	58
3.6. The use of microorganisms	62
4. Conclusions	64
References	66

PART II POLYESTER-BASED THERMOPLASTIC ELASTOMERS

Chapter 3 Polyester Thermoplastic Elastomers: Synthesis, Properties, and Some Applications

Z. Roslaniec

1. Introduction	77
2. Chemical structure of polyester elastomers	78
3. Poly(alkylene oxide) flexible segment-based polyester elastomers	79

4. Modified poly(butylene terephthalate) rigid segment-based polyester elastomers	80
5. Branched polyester elastomers	83
6. Synthesis of poly(ether ester) block copolymers	84
7. Other multiblock polyester elastomers	89
8. Polyester thermoplastic elastomers from blends	99
9. A new processing aspect: weldability of polyester elastomers	100
10. Polyester elastomers for biomedical application	101
11. Conclusions and outlook	105
References	106

Chapter 4 Terpoly(Ester-*b*-Ether-*b*-Amide) Thermoplastic Elastomers: Synthesis, Structure, and Properties

R. Ukielski

1. Introduction	117
2. Chemical structure of terpoly(ester- <i>b</i> -ether- <i>b</i> -amide)s	118
3. Synthesis of triblock $-(GT-b-PO_4-b-PA)_n$ polymers	119
4. Solubility of the blocks	122
5. Structure-property relationships	122
5.1. Thermal properties of $-(4GT-b-PO_4-b-PA12)_n$	125
5.2. Phase composition of terpoly(ester- <i>b</i> -ether- <i>b</i> -amide)s	133
5.3. Mechanical properties of $-(4GT-b-PO_4-b-PA12)_n$	134
6. Conclusions and outlook	137
References	139

Chapter 5 High Performance Thermoplastic Aramid Elastomers: Synthesis, Properties, and Applications

H. Yamakawa, H. Miyata

1. Introduction	141
2. Development of thermoplastic aramid elastomers	142
3. Type I poly(aramid- <i>b</i> -polyether) elastomers	143
3.1. Synthesis of reactive aramid compounds	143
3.2. Synthesis of aramid elastomers	143
3.3. Thermal properties	147
3.4. Mechanical properties	150

3.5. Dynamic-mechanical properties	151
3.6. Chemical properties	152
4. Type II poly(aramid- <i>b</i> -polyether) elastomers	153
4.1. Synthesis of reactive aramid compounds	153
4.2. Synthesis of aramid elastomers	154
4.3. Thermal properties	154
4.4. Mechanical properties	154
4.5. Chemical properties	155
4.6. Aramid elastomers with other polyether soft segments	155
5. Poly(aramid- <i>b</i> -polyester) elastomers	156
5.1. Synthesis and properties of aramid- <i>b</i> -polyester elastomers	156
5.2. A novel synthetic route to aramid- <i>b</i> -polyester elastomers	158
6. Applications	160
7. Conclusions	161
References	162

Chapter 6 Poly(Ether Ester) Thermoplastic Elastomers: Phase and Deformation Behavior on the Nano- and Microlevel

S. Fakirov

1. Introduction	167
2. Phase behavior of PEEs	170
2.1. Number of phases present and their miscibility	170
2.2. Amorphous phase distribution in PEE copolymers	173
2.3. Does crystal thickening exist in segmented and multiblock copolymers?	175
3. Deformation behavior of PEE as revealed by small-angle X-ray scattering	177
3.1. Effect of chain flexibility on the deformation of PET, PBT, PEE, and PBT/PEE blend	177
3.2. Relationship between macro- and nano-deformation in PEE	182
3.3. Chord distribution of a neat EM400 bristle	187
4. Nanostructure evolution during the straining cycle	189
5. Conclusions and outlook	193
Acknowledgement	194
References	194

Chapter 7 Condensation Thermoplastic Elastomers Under Load: Methodological Studies of Nanostructure Evolution by X-ray Scattering

N. Stribeck

1. Introduction	197
1.1. Phase separation	197
1.2. “Living” nanostructure	197
1.3. X-ray techniques in process monitoring	198
1.4. Progress in technology and methodology	198
2. Materials	199
3. Basic notions	199
3.1. Nanostructure topology	199
3.2. Non-topological parameters	200
3.3. Isotropic vs. anisotropic SAXS patterns	200
3.4. Multidimensional chord distributions	201
3.5. Longitudinal and transverse structure	202
3.6. Void scattering	203
4. Theoretical	203
4.1. Basic definitions in SAXS	203
4.2. Projections and sections	205
4.3. Projections useful for TPEs studied under uniaxial load	206
4.4. Correlation functions and their derivatives	207
4.5. Data processing	209
5. Nanostructure evolution and processes observed with condensation TPEs	210
5.1. Poly(ether ester)s during straining	210
5.2. Swollen and drawn poly(ether amide)s	217
Acknowledgement	222
References	222

Chapter 8 Dielectric Relaxation of Polyester-Based Thermoplastic Elastomers

T. A. Ezquerro

1. Introduction	227
2. Study of the relaxation behavior by means of dielectric spectroscopy ...	228
3. Dielectric spectroscopy of poly(ether ester) thermoplastic elastomers ...	228
4. Dielectric spectroscopy of multiblock thermoplastic elastomers	230
5. Relaxation behavior of poly(ester carbonate) block copolymer across the melting region	232

6. Conclusion	237
Acknowledgement	237
References	237

PART III POLYAMIDE-BASED THERMOPLASTIC ELASTOMERS

Chapter 9 Thermoplastic Poly(Ether-*b*-Amide) Elastomers: Synthesis

F. L. G. Malet

1. Introduction	243
2. Chemical structure of TPE	244
3. Synthetic methods	245
3.1. Polymerization in solution	245
3.2. Interfacial polymerization	247
3.3. Direct polycondensation using condensing agents	247
3.4. Anionic polymerization	248
3.5. Thermal polymerization	248
4. Thermal polymerization of TPE-A with ester links	249
4.1. Polymerization processes	250
4.2. Nature of the raw materials	251
4.3. Influence of the catalyst	253
4.4. Influence of the molar ratio	254
4.5. Influence of the temperature	255
4.6. Influence of the stirring	256
4.7. Influence of the vacuum level	256
5. Conclusion	257
References	257

Chapter 10 Poly(Ether-*b*-Amide) Thermoplastic Elastomers: Structure, Properties, and Applications

R.-P. Eustache

1. Structure and characterization	263
1.1. Crystallinity and morphology	264
1.2. Microphase separation vs. hard and soft segment block length ...	269

2. Properties	272
2.1. Mechanical properties	273
2.2. Physico-chemical properties	275
2.3. Processing	276
3. Applications	277
3.1. Sporting goods	278
3.2. Medicine	279
3.3. Industry	279
3.4. Breathable structures	279
3.5. Fragrance carrier	279
3.6. Polymer additives and polymer components	280
4. Conclusions and outlook	280
References	280

Chapter 11 Semicrystalline Segmented Poly(Ether-*b*-Amide) Copolymers: Overview of Solid-State Structure-Property Relationships and Uniaxial Deformation Behavior

J. P. Sheth, G. L. Wilkes

1. Introduction	283
2. PTMO-PA12 based copolymers	286
2.1. Mechanical properties	287
2.2. Thermal analysis	291
2.3. Structure determination by scattering and microscopy studies ...	293
2.4. Uniaxial deformation behavior	299
3. Other poly(ether- <i>b</i> -amide) copolymers	310
3.1. Poly(ethylene oxide)-based PEBA	310
3.2. PEBA based on aromatic PA segments of uniform length	311
4. Conclusion	318
References	319

PART IV POLYURETHANE-BASED THERMOPLASTIC ELASTOMERS

Chapter 12 Thermoplastic Polyurethane Elastomers in Interpenetrating Polymer Networks

O. Grigoryeva, A. Fainleib, L. Sergeeva

1. Introduction	327
2. Polyurethane elastomer-based thermoplastic apparent interpenetrating polymer networks	328
2.1. Semicrystalline polyurethane/(styrene-acrylic acid) copolymer-based thermoplastic AIPNs produced in the melt	328
2.2. Semicrystalline polyurethane/(styrene-acrylic acid) copolymer-based thermoplastic AIPNs produced in solution	332
2.3. Semicrystalline polyurethane/(styrene-acrylic acid) ion-containing block copolymer thermoplastic AIPNs	336
2.4. Polyaminourethane/polyurethane ionomer-containing thermoplastic AIPNs	336
3. Polyurethane-containing semi-IPNs	338
3.1. Polyurethane/polyurethane semi-IPNs with miscible components	339
3.2. Polyurethane-containing semi-IPNs with immiscible components	340
4. Conclusions	350
Acknowledgements	350
References	351

Chapter 13 Polyurethane Thermoplastic Elastomers Comprising Hydrazine Derivatives: Chemical Aspects

Yu. Savelyev

1. Introduction	355
2. Synthesis and properties of polyurethane thermoplastic elastomers comprising hydrazine derivatives	356
2.1. Polyurethane-semicarbazides	356
2.2. Sulfur-containing polyurethane-semicarbazides	356
2.3. Phosphorus-containing polyurethane-semicarbazides	357
2.4. Ionomeric polyurethane-semicarbazides	358
2.5. Polyurethane thermoplastic elastomers with macroheterocyclic fragments in the main chain	360

2.6. Other hydrazine-containing polyurethane thermoplastic elastomers	362
2.7. Polyurethane-semicarbazides and polyurethane-sulfosemicarbazides modified by transition metal β -diketonates	364
3. Structure and performance of hydrazine-containing polyurethane thermoplastic elastomers	366
3.1. Macrochain structure and supramolecular organization of hydrazine-containing polyurethane elastomers	366
3.2. Behavior of hydrazine-containing polyurethane thermoplastic elastomers in the process of complex formation	371
3.3. Biological activity of hydrazine-containing polyurethane thermoplastic elastomers	374
4. Conclusions	377
Acknowledgement	378
References	378

Chapter 14 Molecular Dynamics and Ionic Conductivity Studies in Polyurethane Thermoplastic Elastomers

P. Pissis, G. Polizos

1. Introduction	381
2. Dielectric techniques for molecular dynamics studies	383
2.1. Broadband dielectric spectroscopy	383
2.2. Thermally stimulated depolarization currents techniques	386
3. Ionic conductivity measurements and analysis	387
4. Microphase separation and morphology of segmented polyurethanes ..	389
5. Neat polyurethane thermoplastic elastomers	391
6. Ionomers based on polyurethane thermoplastic elastomers	403
6.1. Ionomers with ionic moieties in the hard segments	403
6.2. Ionomers with ionic moieties in the soft segments	409
6.3. Telechelics based on poly(ethylene oxide)	419
7. Nanocomposites based on polyurethane thermoplastic elastomers	424
8. Conclusions	428
Acknowledgement	429
References	429

PART V BLENDS, COMPOSITES, APPLICATIONS, AND RECYCLING OF THERMOPLASTIC ELASTOMERS

Chapter 15 Polymer Blends Containing Thermoplastic Elastomers of the Condensation and Addition Types

J. Karger-Kocsis, S. Fakirov

1. Introduction	437
1.1. General remarks	437
1.2. Miscibility <i>vs.</i> compatibility	440
1.3. Chemical interactions in blends of condensation polymers	440
2. Thermoplastic blends with polycondensation elastomers	442
2.1. Thermoplastic blends with poly(ether amide)s	442
2.2. Thermoplastic blends with poly(ether ester) elastomers	442
3. Thermoplastic blends with polyaddition thermoplastic elastomers	460
4. Rubber blends with thermoplastic elastomers	463
5. Thermoset resin blends with thermoplastic elastomers	463
6. Summary and outlook	465
Acknowledgements	466
References	466

Chapter 16 “Nanoreinforcement” of Thermoplastic Elastomers

J. Karger-Kocsis

1. Introduction	473
2. Concepts and realization of nanoscale reinforcements	474
3. Nanoreinforcement of thermoplastic polyurethanes	476
3.1. <i>In situ</i> techniques	476
3.2. Solvent-assisted methods	478
3.3. Melt compounding	482
4. Nanoreinforcement of “condensation” thermoplastic elastomers	484
5. Outlook and future trends	485
Acknowledgements	485
References	485

Chapter 17 **Commercial Condensation and Addition Thermoplastic Elastomers: Composition, Properties, and Applications**

O. Gryshchuk

1. Introduction	489
2. Polyester-based thermoplastic elastomers (TPE-E)	490
2.1. Hytrel [®] engineering thermoplastic elastomers	490
2.2. Ecdel [®] engineering thermoplastic elastomers	491
2.3. RTP [®] engineering thermoplastic elastomers	493
2.4. Kopel [®] engineering thermoplastic elastomer	494
2.5. Arnitel [®] engineering thermoplastic elastomer	494
2.6. Keyflex [®] engineering thermoplastic elastomers	496
2.7. Pibiflex [®] engineering thermoplastic elastomer	497
2.8. Riteflex [®] engineering thermoplastic elastomers	497
2.9. Skypel [®] engineering thermoplastic elastomer	499
3. Polyamide-based thermoplastic elastomers (TPE-A)	501
3.1. Pebax [®] engineering thermoplastic elastomers	501
3.2. Vestamid [®] engineering thermoplastic elastomers	503
3.3. D-RIM Nyrin [®] engineering thermoplastic elastomer	503
3.4. Grilon [®] ELX and Grilamid [®] ELY engineering thermoplastic elastomers	505
4. Polyurethane-based addition thermoplastic elastomers (TPE-U)	505
4.1. Skythane [®] engineering thermoplastic elastomer	508
4.2. Isoplast [®] and Pellethane [®] engineering thermoplastic elastomers	508
4.3. Estane [®] engineering thermoplastic elastomer	509
4.4. Texin [®] and Desmopan [®] engineering thermoplastic elastomers	511
4.5. Avalon [®] and Irogran [®] engineering thermoplastic elastomers	511
4.6. Elastollan [®] engineering thermoplastic elastomer	512
4.7. Laripur [®] engineering thermoplastic elastomers	515
4.8. Lastane [®] engineering thermoplastic elastomers	516
4.9. Versollan [®] engineering thermoplastic elastomers	516
4.10. Pearlstick [®] , Pearlthane [®] , Pearlcoat [®] , and Pearlbond [®] engineering thermoplastic elastomers	516
5. Outlook	519
References	519

Chapter 18 **Shape Memory Effects of Multiblock Thermoplastic Elastomers**

B. K. Kim, S. H. Lee, M. Furukawa

1. Introduction	521
1.1. Molecular structure requirement	522
1.2. Shape memory programming	522
1.3. Morphology change	524
1.4. Elastic energy balance and entropy elasticity	525
1.5. Shape memory polymers <i>vs.</i> alloys	526
2. Crystalline polyester TPU	527
2.1. Basic considerations	527
2.2. Molecular design and synthesis of TPU	528
2.3. Morphology and thermal properties	529
2.4. Dynamic mechanical properties	532
2.5. Loading in the rubbery state	533
2.6. Loading in the glassy state	534
3. Amorphous TPU with allophanate crosslinks	535
3.1. Basic considerations	535
3.2. Synthetic route	535
3.3. Dynamic mechanical properties	537
3.4. Melt viscosities	539
3.5. Thermal properties	540
3.6. Thermomechanical properties	541
4. Amorphous TPUs based on trifunctional polyols	544
4.1. Synthetic route	544
4.2. Dynamic and thermomechanical properties	545
5. Polyurethanes containing mesogenic moieties	547
5.1. Basic considerations	547
5.2. Thermal and thermomechanical properties	547
6. Other thermoplastic elastomers showing shape memory effects	548
6.1. Polymer networks with crystalline segments	548
6.2. Polycaprolactone-polyamide block copolymers	549
7. Shape memory blends and composites	554
7.1. Basic considerations	554
7.2. PVC/TPU blends	555
7.3. Phenoxy/TPU blend	558
7.4. Shape memory composites	560
8. Conclusions and outlook	562
Acknowledgements	563
References	563

Chapter 19 Condensation and Addition Thermoplastic Elastomers: Recycling Aspects

T. Spychaj, M. Kacperski, A. Kozłowska

1. Recycling opportunities for step-growth polymers	567
2. Cleavage of ester, amide and urethane bonds	569
3. Recycling of thermoplastic elastomers	570
3.1. Recycling of polyester-based (co)polymers	570
3.2. Recycling of polyamide-based (co)polymers	577
3.3. Recycling of urethane polymers	582
4. Life cycle analysis	590
5. Summary and conclusions	592
References	592
 Acknowledgements to previous publishers	 597
 Author Index	 605
 Subject Index	 609
