

Index

- Activationless electron transfer, 317
Active coordinate, 21, 58
Adiabatic electron transfer, 287
Adiabatic exciton, 424
Adiabatic proton transfer, 394
Adiabatic wave function, 34
Avoided crossing, 66
- Beer's law, 237
Bimolecular electron transfer, 288
Bixon–Jortner rate, 202
Bloch model, 145, 440, 443
Born solvation energy, 370
Born–Oppenheimer approximation, 34
Born–Oppenheimer separation, 380, 392
Bose–Einstein distribution, 122
Bridge–assisted electron transfer, 293
Bright state, 196, 201
- Cage effect, 207
Canonical density operator, 101
Charge transfer exciton, 408
Chirped laser pulse, 460
Chronological time ordering, 181
Classical canonical equations, 172
Coarse graining, 97, 109, 135, 145
Coherent exciton transfer, 429
Combined density of states, 241
Condon approximation, 240, 302, 431
Configurational average, 448
Conical intersection, 66, 69
Coordinate representation, 103
Coulomb operator, 72
Coupled–channel equations, 277, 401
Cumulant expansion, 243, 256, 258
Curve–crossing model, 23, 237, 256, 278
- Dark state, 196, 201
- Debye dielectric relaxation, 331
Debye spectral density, 128, 247
Degree of coherence, 101
Density Functional Theory, 40
Density matrix, 102
Density operator, 100
Dephasing, 89
Dephasing rates, 143
Dephasing time, 242
Detailed balance, 143, 144
Diabatic representation, 65, 393
Dielectric medium, 42
Dipole–dipole correlation function, 251
Dipole–dipole interaction, 417
Dissipation, 82
Dissipative superoperator, 182
Donor–acceptor complex, 288
Dynamic correlations, 40
Dynamic coupling, 64
Dynamic disorder, 232
Dyson equation, 164
- Electric susceptibility, 236
Encounter complex, 290
Energy relaxation rates, 143
Energy representation, 103
Exchange correlation, 71
Exchange operator, 72
Exciton hopping transfer, 442
Exciton transfer, 24
Exciton–exciton annihilation, 451
Exciton–exciton repulsion, 419
Exciton–vibrational coupling, 426
Excitonic potential energy surface, 427
- Förster radius, 432
Förster rate, 432
Fast Fourier Transform method, 190

- Fermi resonance, 199
Flip operator, 101
Fluctuation–dissipation theorem, 132
Fock operator, 39
Fokker–Planck equation, 159
Force autocorrelation function, 213
Franck–Condon factor, 58, 72, 209, 240, 268, 304
Franck–Condon principle, 229
Frenkel exciton, 406
Functional derivative, 368
- Gated proton transfer, 387
Gaussian disorder, 449
Generalized linear susceptibilities, 131
Generalized Master Equation, 110
Generating function, 126
Golden Rule, 95, 201
Green’s operator, 163
- H–aggregate, 447
Hückel model, 77
Haken–Strobl–Reineker model, 408
Hartree product, 37, 399, 412, 413
Hartree–Fock equation, 39, 72
Heat bath, 82
Heisenberg picture, 88
Heitler–London approximation, 416
Hellmann–Feynman force, 395
Hessian matrix, 49
Hole transfer, 290
Homogeneous broadening, 84, 232, 248
Huang–Rhys factor, 243
Hydrogen bond, 42, 384
- Impulsive excitation limit, 268
Incoherent exciton transfer, 409, 429
Influence functional, 170
Inhomogeneous broadening, 84, 232, 248, 448
Initial correlations, 118, 173
Inner–sphere electron transfer, 291
Instantaneous adiabatic states, 395
Instantaneous normal modes, 123, 216
Inter–system crossing, 228
Interaction representation, 90
Intermolecular electron transfer, 288
Intermolecular proton transfer, 383
Internal conversion, 23, 228, 453
Intramolecular electron transfer, 287
Intramolecular proton transfer, 383
Intramolecular vibrational redistribution, 23, 197
Inverted electron transfer, 317
IVR threshold, 204
- J–aggregate, 447
- Kasha rule, 228, 275
Kinetic isotope effect, 378
Kohn–Sham equations, 41
Kramers–theory, 308
- Landau–Zener length, 312
Landau–Zener rate, 312
Lattice phonons, 208
Lennard–Jones potential, 212
Light–matter interaction, 235
Lindblad form, 150, 183, 189, 193
Linear dielectric susceptibility, 251
Lineshape function, 241, 242, 279
Liouville equation, 108
Liouville space approach, 159
Liouville space pathways, 372
Liouville superoperator, 105, 137
Local field approximation, 235
Long–range electron transfer, 293
Longitudinal relaxation time, 144, 338
- Marcus formula, 316
Markov approximation, 135
Massey parameter, 311
Master Equation, 83
Mean–field approach, 40, 114, 401
Memory effect, 121, 135, 139, 162, 188, 170
Memory kernel, 110
Memory matrix, 139
Minimum energy path, 59
Mixed state, 21
Mixing angle, 69, 77
Molecular aggregate, 407, 408
Molecular dimer, 413
Molecular polarizability, 330
Molecular ring, 79
Motional line narrowing, 248
Multiple factorized form, 114
- Nakajima–Zwanzig equation, 180
Non–crossing rule, 66
Non–Markovian Dynamics, 135

- Nonadiabatic coupling, 174, 275
Nonadiabatic electron transfer, 287, 307
Nonadiabaticity operator, 33
Normal electron transfer, 317
Normal modes, 51
Normal operator ordering, 184
Nuclear tunneling, 308
- Optimal control theory, 467
Optimal pulse, 466
Outer-sphere electron transfer, 291
- Partial time ordering, 182
Partial Wigner representation, 177
Partition function, 101
Pauli Master Equation, 83, 98
Pauli principle, 31, 37
Pekar factor, 332
Phase space, 105
Photoinduced electron transfer, 289
Photosynthesis, 286, 380, 407
Polarization, 234
Polarization energy, 316
Polarization field, 44
Potential energy surface, 33
Proton pump, 286, 380
Proton transfer coordinate, 383
Pseudo-potential, 296
Pure dephasing, 138, 144, 223
Pure state, 99
Pure-dephasing time, 242
- Quantum Liouville equation, 105
Quantum Master Equation, 121, 134, 243
Quantum-classical dynamics, 171, 325, 395
- Radiationless transition, 275
Reaction coordinate, 60, 287
Reduced density operator, 112, 468
Relaxation, 82
Relaxation matrix, 141
Relaxation superoperator, 137
Relevant system, 21
Reorganization energy, 62, 316
Reservoir correlation function, 120
Rotating wave approximation, 145, 222, 239
- S-operator, 90, 92
Scattering matrix, 90
- Self-energy, 94
Semiclassical molecule-field interaction, 234, 235
Shift operator, 106
Single-exciton Hamiltonian, 420
Single-exciton model, 420
Slater determinant, 38
Solvation energy, 48
Solvation shell, 46, 328
Solvent-controlled electron transfer, 308
Spectator coordinate, 58
Spectral density, 128, 211, 246
Spectral density for electron transfer, 323
Spectral overlap, 432
Spin orbitals, 37
Spin-boson Hamiltonian, 303
Split-operator method, 192
Spontaneous emission, 263
Squeezing operator, 72
State representation, 103
Static correlation, 40
Static disorder, 84, 232
Statistical operator, 100
Stokes shift, 244, 246, 262, 434
Superexchange, 294
Supermolecule approach, 42
Superoperator, 105
Surface hopping, 175, 402
Survival probability, 89
System-bath Hamiltonian, 62, 217, 219
- Target operator, 468
Through-bond electron transfer, 293
Through-space electron transfer, 293
Tier model, 204
Tight-binding Hamiltonian, 298
Time-dependent self-consistent field, 400
Time-evolution operator, 87
Time-ordering operator, 92
Trace formula, 100
Transfer integral, 298
Transition amplitude, 94
Transition density, 416
Transverse relaxation time, 144
Two-exciton Hamiltonian, 420
Two-exciton model, 420
Two-exciton state, 410, 421
- Unimolecular electron transfer, 288

Vibrational energy relaxation, 23, 198
Vibrational progression, 244

Wannier–Mott exciton, 408

Wave packet, 88, 209, 444
Wigner representation, 104, 106

Zeroth–order states, 196, 201
