

## Contents

**Preface** IX

**Nomenclature** XIII

<b>1</b>	<b>Basic Concepts of the Probability Theory</b>	<b>1</b>
1.1	Events, Set of Events, and Probability	1
1.2	Random Variables, Probability Distribution Function, Average Value, and Variance	4
1.3	Generalized Functions	5
1.4	Methods of Averaging	8
1.5	Characteristic Functions	12
1.6	Moments and Cumulants of Random Variables	14
1.7	Correlation Functions	16
1.8	Bernoulli, Poisson, and Gaussian Distributions	18
1.9	Stationary Random Functions, Homogeneous Random Fields	22
1.10	Isotropic Random Fields. Spectral Representation	25
1.11	Stochastic Processes. Markovian Processes. The Chapman–Kolmogorov Integral Equation	28
1.12	The Chapman–Kolmogorov, Chapman–Feller, Fokker–Planck, and Liouville Differential Equations	31
1.12.1	Derivation of the Differential Chapman–Kolmogorov Equation	31
1.12.2	Discontinuous (“Jump”) Processes. The Kolmogorov–Feller Equation	35
1.12.3	Diffusion Processes. The Fokker–Planck Equation	35
1.12.4	Deterministic Processes. The Liouville Equation	40
1.13	Stochastic Differential Equations. The Langevin Equation	43
1.13.1	The Langevin Equation	43
1.13.2	The Diffusion Equation	44
1.13.2.1	The Diffusion Equation with Chemical Reactions Taken into Account	45
1.13.2.2	Brownian Motion of a Particle in a Hydrodynamic Medium	46
1.14	Variational (Functional) Derivatives	48
1.15	The Characteristic Functional	53

<b>2</b>	<b>Elements of Microhydrodynamics</b>	<b>59</b>
2.1	Motion of an Isolated Particle in a Quiescent Fluid	61
2.2	Motion of an Isolated Particle in a Moving Fluid	70
2.3	Motion of Two Particles in a Fluid	78
2.3.1	Fluid is at Rest at the Infinity ( $v^\infty = 0$ )	78
2.3.2	Fluid is Moving at the Infinity ( $v^\infty \neq 0$ )	92
2.4	Multi-Particle Motion	95
2.5	Flow of a Fluid Through a Random Bed of Particles	98
<b>3</b>	<b>Brownian Motion of Particles</b>	<b>109</b>
3.1	Random Walk of an Isolated Particle	110
3.1.1	Isotropic Distribution	113
3.1.2	Gaussian Distribution	114
3.1.3	An Arbitrary Distribution $\tau(r)$ in the Limiting Case $N \gg 1$	115
3.2	Random Walk of an Ensemble of Particles	116
3.3	Brownian Motion of a Free Particle in a Quiescent Fluid	117
3.4	Brownian Motion of a Particle in an External Force Field	122
3.5	The Smoluchowski Equation	124
3.6	Brownian Motion of a Particle in a Moving Fluid	126
3.7	Brownian Diffusion with Hydrodynamic Interactions	130
3.8	Brownian Diffusion with Hydrodynamic Interactions and External Forces	136
3.8.1	High Peclet Numbers: $Pe_{ij} \gg 1$	139
3.8.2	Small Peclet Numbers, $Pe_{ij} \ll 1$	140
3.9	Particle Sedimentation in a Monodisperse Dilute Suspension	142
3.10	Particle Sedimentation in a Polydisperse Dilute Suspension, with Hydrodynamic and Molecular Interactions and Brownian Motion of Particles	151
3.11	Transport Coefficients in Disperse Media	157
3.11.1	Infinitely Dilute Suspension with Non-interacting Particles	161
3.11.2	The Influence of Particle Interactions on Transport Coefficients	164
3.12	Concentrated Disperse Media	167
<b>4</b>	<b>Turbulent Flow of Fluids</b>	<b>183</b>
4.1	General Information on Laminar and Turbulent Flows	183
4.2	The Momentum Equation for Viscous Incompressible Fluids	184
4.3	The Equations of Heat Inflow, Heat Conduction and Diffusion	187
4.4	The Conditions for the Beginning of Turbulence	189
4.5	Hydrodynamic Instability	190
4.6	The Reynolds Equations	192
4.7	The Equation of Turbulent Energy Balance	197
4.8	Isotropic Turbulence	202
4.9	The Local Structure of Fully Developed Turbulence	212
4.10	Turbulent Flow Models	223
4.10.1	Semi-empirical Theories of Turbulence	224

4.10.2	The Use of Transport Equations	230
4.11	Use of the Characteristic Functional in the Theory of Turbulence	234
4.12	Intermittency in a Turbulent Flow	244
<b>5</b>	<b>Particle Motion in a Turbulent Flow</b>	<b>251</b>
5.1	The Eulerian and Lagrangian Approaches to the Description of Fluid Flow and Particle Motion	251
5.2	Lagrangian Statistical Characteristics of Turbulence	256
5.3	Turbulent Diffusion	267
5.4	A Semiempirical Model of Turbulent Diffusion	277
5.5	Models of Two-phase Disperse Turbulent Flows	282
5.6	Deposition of Particles from a Turbulent Flow	292
5.7	Interaction of Particles in a Turbulent Flow	304
5.8	Chemical Reactions in a Turbulent Flow	306
5.8.1	Concepts of Chemical Kinetics	309
5.8.2	Method of Moments	312
5.8.3	Approximations for Chemical Reaction Rates	319
5.9	The PDF Method	322
<b>6</b>	<b>Coagulation and Breakup of Inertialess Particles in a Turbulent Flow</b>	<b>335</b>
6.1	Kinetic Equations of Coagulation	335
6.2	Fundamental Features of the Coagulation of Particles	344
6.3	A Model of Turbulent Diffusion	349
6.4	Hydrodynamic, Molecular, and Electrostatic Forces	357
6.5	Conducting Particles in an Electric Field	365
6.6	Coagulation of Particles in a Turbulent Flow	370
6.7	Breakup of Particles	384
<b>7</b>	<b>Motion and Collision of Inertial Particles in a Turbulent Flow</b>	<b>395</b>
7.1	Motion of Particles without Mutual Collisions	396
7.2	Motion of Particles with Mutual Collisions	413
7.3	Frequency of Collisions of Particles	421
7.4	Preferential Concentration of Particles in Isotropic Turbulence	433
