<i>Preface</i>	ix
<i>Acknowledgements</i>	xi
<i>Introduction</i>	xiii
1 What Instrumental Approaches are Available	1
1.1 Ion Sources	1
1.1.1 Electron Ionization	3
1.1.2 Chemical Ionization	4
1.1.3 Atmospheric Pressure Chemical Ionization	6
1.1.4 Electrospray Ionization	8
1.1.5 Atmospheric Pressure Photoionization	11
1.1.6 Matrix-assisted Laser Desorption/Ionization	12
1.2 Mass Analysers	14
1.2.1 Mass Resolution	14
1.2.2 Sector Analysers	15
1.2.3 Quadrupole Analysers	19
1.2.4 Time-of-flight	25
1.3 GC/MS	27
1.3.1 Total Ion Current (TIC) Chromatogram	27
1.3.2 Reconstructed Ion Chromatogram (RIC)	28
1.3.3 Multiple Ion Detection (MID)	29
1.4 LC/MS	29
1.5 MS/MS	30
1.5.1 MS/MS by Double Focusing Instruments	30
1.5.2 MS/MS by Triple Quadrupoles	31
1.5.3 MS/MS by Ion Traps	32
1.5.4 MS/MS by Q-TOF	34
References	34
2 How to Design a Quantitative Analysis	37
2.1 General Strategy	38

2.1.1	Project	41
2.1.2	Sampling	41
2.1.3	Sample Treatment	42
2.1.4	Instrumental Analysis	43
2.1.5	Method Validation	53
	References	53
3	How to Improve Specificity	55
3.1	Choice of a Suitable Chromatographic Procedure	56
3.1.1	GC/MS Measurements in Low and High Resolution Conditions	56
3.1.2	LC/ESI/MS and LC/APCI/MS Measurements	61
3.2	Choice of a Suitable Ionization Method	79
3.3	An Example of High Specificity and Selectivity Methods: The Dioxin Analysis	85
3.3.1	Use of High Resolution MID Analysis	85
3.3.2	NICI in the Analysis of Dioxins, Furans and PCBs	93
3.3.3	MS/MS in the Detection of Dioxins, Furans and PCBs	95
3.4	An Example of MALDI/MS in Quantitative Analysis of Polypeptides: Substance P	101
	References	106
4	Some Thoughts on Calibration and Data Analysis	107
4.1	Calibration Designs	108
4.2	Homoscedastic and Heteroscedastic Data	108
4.2.1	Variance Model	109
4.3	Calibration Models	109
4.3.1	Unweighted Regression	109
4.3.2	Weighted Regression	119
4.3.3	A Practical Example	126
4.4	Different Approaches to Estimate Detection and Quantification Limits	130
	References	132
