Introduction 1

About This Book	1
Conventions Used in This Book	2
What You're Not to Read	2
Foolish Assumptions	3
How This Book is Organized	3
Part I: Getting Started with Geometry Basics	4
Part II: Introducing Proofs	4
Part III: Triangles: Polygons of the Three-Sided Variety	4
Part IV: Polygons of the Four-or-More-Sided Variety	5
Part V: Working with Not-So-Vicious Circles	5
Part VI: Going Deep with 3-D Geometry	5
Part VII: Placement, Points, and Pictures:	
Alternative Geometry Topics	6
Part VIII: The Part of Tens	6
Part IX: Appendixes	6
Icons Used in This Book	6
Where to Go from Here	7

Part I: Getting Started with Geometry Basics 9

Chapter 1: Introducing Geometry 11

Studying the Geometry of Shapes	12
One-dimensional shapes	12
Two-dimensional shapes	12
Three-dimensional shapes	13
Getting Acquainted with Geometry Proofs	14
Easing into proofs with an everyday example	15
Turning everyday logic into a proof	15
Sampling a simple geometrical proof	16
When Am I Ever Going to Use This?	18
When you'll use your knowledge of shapes	18
When you'll use your knowledge of proofs	19
Why You Won't Have Any Trouble with Geometry	19

Chapter 2: Building Your Geometric Foundation	21
Getting Down with Definitions	21
A Few Points on Points	25
Lines, Segments, and Rays Pointing Every Which Way	26
Singling out horizontal and vertical lines	26
Doubling up with pairs of lines	27
Investigating the Plane Facts	29
Everybody's Got an Angle	30
Goldilocks and the three angles: Small, large, and just "right"	30
Angle pairs: Often joined at the hip	31
Chapter 3: Sizing Up Segments and Analyzing Angles	35
Measuring Segments and Angles	35
Measuring segments	35
Measuring angles	36
Adding and Subtracting Segments and Angles	39
Cutting in Two or Three: Bisection and Trisection	40
Bisecting and trisecting segments	40
Bisecting and trisecting angles	42
Proving (Not Jumping to) Conclusions about Figures	43
Part II: Introducing Proofs	47
Chapter 4: Prelude to Proofs	49
Getting the Lay of the Land: The Components of a Formal Geometry Proof	49
Reasoning with If-Then Logic	51
If-then chains of logic	52
You've got your reasons: Definitions, theorems, and postulates	53
Bubble logic for two-column proofs	55
Horsing Around with a Two-Column Proof	56
Chapter 5: Your Starter Kit of Easy Theorems and Short Proofs ...	59
Doing Right and Going Straight: Complementary and Supplementary Angles	59
Addition and Subtraction: Eight No-Big-Deal Theorems	63
Addition theorems	63
Subtraction theorems	67
Like Multiples and Like Divisions? Then These Theorems Are for You!	70
The X-Files: Congruent Vertical Angles Are Out There	73
Pulling the Switch with the Transitive and Substitution Properties	75

Chapter 6: The Ultimate Guide to Tackling a Longer Proof 79

Making a Game Plan80
 Using All the Givens81
 Making Sure You Use If-Then Logic81
 Chipping Away at the Problem83
 Jumping Ahead and Working Backward85
 Filling In the Gaps86
 Writing Out the Finished Proof88

Part III: Triangles: Polygons of the Three-Sided Variety 89

Chapter 7: Grasping Triangle Fundamentals 91

Taking In a Triangle’s Sides91
 Scalene triangles: Akilter, awry and askew92
 Isosceles triangles: Nice pair o’ legs93
 Equilateral triangles: All parts are created equal93
 Introducing the Triangle Inequality Principle94
 Getting to Know Triangles by Their Angles96
 Sizing Up Triangle Area96
 Scaling altitudes96
 Determining a triangle’s area98
 Locating the “Centers” of a Triangle102
 Balancing on the centroid102
 Finding three more “centers” of a triangle104

Chapter 8: Regarding Right Triangles 107

Applying the Pythagorean Theorem107
 Perusing Pythagorean Triple Triangles113
 The Fab Four Pythagorean triple triangles113
 Families of Pythagorean triple triangles115
 Getting to Know Two Special Right Triangles118
 The 45°- 45°- 90° triangle — half a square118
 The 30°- 60°- 90° triangle — half of an equilateral triangle120

Chapter 9: Completing Congruent Triangle Proofs 123

Introducing Three Ways to Prove Triangles Congruent123
 SSS: Using the side-side-side method124
 SAS: Taking the side-angle-side approach126
 ASA: Taking the angle-side-angle tack128
 CPCTC: Taking Congruent Triangle Proofs a Step Further131
 Defining CPCTC131
 Tackling a CPCTC proof132
 Eying the Isosceles Triangle Theorems135

Trying Out Two More Ways to Prove Triangles Congruent	137
AAS: Using the angle-angle-side theorem	137
HLR: The right approach for right triangles	140
Going the Distance with the Two Equidistance Theorems	141
Determining a perpendicular bisector	142
Using a perpendicular bisector	143
Making a Game Plan for a Longer Proof	145
Running a Reverse with Indirect Proofs	147

Part IV: Polygons of the Four-or-More Sided Variety 149

Chapter 10: The Seven Wonders of the Quadrilateral World151

Getting Started with Parallel-Line Properties	151
Crossing the line with transversals: Definitions and theorems ...	152
Applying the transversal theorems	153
Working with more than one transversal	155
Meeting the Seven Members of the Quadrilateral Family	157
Looking at quadrilateral relationships	158
Working with auxiliary lines	159
Giving Props to Quads: The Properties of Quadrilaterals	162
Properties of the parallelogram	162
Properties of the three special parallelograms	166
Properties of the kite	169
Properties of the trapezoid and the isosceles trapezoid	171

Chapter 11: Proving That You've Got a Particular Quadrilateral ...173

Putting Properties and Proof Methods Together	173
Proving That a Quadrilateral Is a Parallelogram	175
Surefire ways of ID-ing a parallelogram	176
Trying some parallelogram proofs	177
Proving That a Quadrilateral Is a Rectangle, Rhombus, or Square	180
Revvng up for rectangle proofs	181
Waxing rhapsodic about rhombus proofs	182
Squaring off with square proofs	184
Proving That a Quadrilateral Is a Kite	185

Chapter 12: Polygon Formulas: Area, Angles, and Diagonals187

Calculating the Area of Quadrilaterals	187
Setting forth the quadrilateral area formulas	188
Getting behind the scenes of the formulas	188
Trying a few area problems	190
Finding the Area of Regular Polygons	195
Presenting polygon area formulas	195
Tackling more area problems	196

Using Polygon Angle and Diagonal Formulas	199
Interior and exterior design: Exploring polygon angles	199
Handling the ins and outs of a polygon angle problem	200
Criss-crossing with diagonals	201
Chapter 13: Similarity: Same Shape, Different Size	203
Getting Started with Similar Figures	204
Defining and naming similar polygons	204
How similar figures line up	205
Solving a similarity problem	207
Proving Triangles Similar	209
Tackling an AA proof	210
Using SSS- to prove triangles similar	211
Working through an SAS~ proof	212
CASTC and CSSTP, the Cousins of CPCTC	213
Working through a CASTC proof	214
Taking on a CSSTP proof	215
Splitting Right Triangles with the Altitude-on-Hypotenuse Theorem	216
Getting Proportional with Three More Theorems	219
The Side-Splitter Theorem: It'll make you split your sides	219
Crossroads: The Side-Splitter Theorem extended	221
The Angle-Bisector Theorem	223
 <i>Part V: Working with Not-So-Vicious Circles</i>	 225
Chapter 14: Coming Around to Circle Basics	227
The Straight Talk on Circles: Radii and Chords	228
Defining radii, chords, and diameters	228
Introducing five circle theorems	229
Working through a proof	229
Using extra radii to solve a problem	231
Pieces of the Pie: Arcs and Central Angles	232
Three circle definitions for your mathematical pleasure	232
Six scintillating circle theorems	233
Trying your hand at some proofs	235
Going Off on a Tangent about Tangents	237
Introducing the tangent line	237
The common-tangent problem	238
Taking a walk on the wild side with a walk-around problem	241

Chapter 15: Circle Formulas and Theorems	243
Chewing on the Pizza Slice Formulas	243
Determining arc length	244
Finding sector and segment area	247
Pulling it all together in a problem	248
Digesting the Angle-Arc Theorems and Formulas	249
Angles on a circle	250
Angles inside a circle	252
Angles outside a circle	254
Keeping your angle-arc formulas straight	256
Powering Up with the Power Theorems	257
Striking a chord with the Chord-Chord Power Theorem	257
Touching on the Tangent-Secant Power Theorem	259
Seeking out the Secant-Secant Power Theorem	260
Condensing the power theorems into a single idea	262
 Part VI: Going Deep with 3-D Geometry	263
 Chapter 16: 3-D Space: Proofs in a Higher Plane of Existence	265
Lines Perpendicular to Planes	265
Parallel, Perpendicular, and Intersecting Lines and Planes	269
The four ways to determine a plane	269
Line and plane interactions	270
 Chapter 17: Getting a Grip on Solid Geometry	273
Flat-Top Figures: They're on the Level	273
Getting to the Point of Pointy-Top Figures	279
Rounding Things Out with Spheres	285
 Part VII: Placement, Points, and Pictures: Alternative Geometry Topics	287
 Chapter 18: Coordinate Geometry	289
Getting Coordinated with the Coordinate Plane	289
The Slope, Distance, and Midpoint Formulas	291
The slope dope	291
Going the distance with the distance formula	294
Meeting each other halfway with the midpoint formula	295
The whole enchilada: Putting the formulas together in a problem	295
Proving Properties Analytically	298
Step 1: Drawing a general figure	298
Step 2: Solving the problem algebraically	300

Deciphering Equations for Lines and Circles302
 Line equations302
 The standard circle equation303

Chapter 19: Changing the Scene with Geometric Transformations307

Some Reflections on Reflections308
 Getting oriented with orientation309
 Finding a reflecting line310
 Not Getting Lost in Translations312
 A translation equals two reflections312
 Finding the elements of a translation314
 Turning the Tables with Rotations317
 A rotation equals two reflections317
 Finding the center of rotation and the equations of
 two reflecting lines318
 Third Time’s the Charm: Stepping Out with Glide Reflections321
 A glide reflection equals three reflections322
 Finding the main reflecting line322

Chapter 20: Locating Loci and Constructing Constructions325

Meeting the Conditions with Loci326
 The four-step process for locus problems326
 Two-dimensional locus problems326
 Three-dimensional locus problems332
 Drawing with the Bare Essentials: Constructions334
 Three copying methods334
 Bisecting angles and segments337
 Two perpendicular line constructions339
 Constructing parallel lines and using them to
 divide segments341

Part VIII: The Part of Tens343

Chapter 21: Ten Things to Use as Reasons in Geometry Proofs ... 345

The Reflexive Property345
 Vertical Angles Are Congruent346
 The Parallel-Line Theorems346
 Two Points Determine a Line347
 All Radii of a Circle Are Congruent347
 If Sides, Then Angles348
 If Angles, Then Sides348
 The Triangle Congruence Postulates and Theorems349
 CPCTC349
 The Triangle Similarity Postulates and Theorems350

Chapter 22: Ten Cool Geometry Problems	351
Eureka! Archimedes's Bathtub Revelation	351
Determining Pi	352
The Golden Ratio	353
The Circumference of the Earth	354
The Great Pyramid of Khufu	354
Distance to the Horizon	355
Projectile Motion	355
Golden Gate Bridge	356
The Geodesic Dome	357
A Soccer Ball	357
Part IX: Appendixes	359
Appendix A: Formulas and Other Important Stuff	
You Should Know	361
Triangle Stuff	361
Polygon Stuff	362
Circle Stuff	363
3-D Geometry Stuff	365
Coordinate Geometry Stuff	365
Appendix B: Glossary	367
Index	375
