**Preface** XIII

**Introduction** 1

### **Part I** Light-induced physical processes in polymers

#### **1** Absorption of light and subsequent photophysical processes 5

- 1.1 Principal aspects 5
- 1.2 The molecular orbital model 7
- 1.3 The Jablonski diagram 10
- 1.4 Absorption in non-conjugated polymers 10
- 1.5 Absorption in conjugated polymers 12
- 1.6 Deactivation of electronically excited states 13
  - 1.6.1 Intramolecular deactivation 13
  - 1.6.2 Intermolecular deactivation 14
  - 1.6.3 Energy migration and photon harvesting 16
  - 1.6.4 Deactivation by chemical reactions 21
- 1.7 Absorption and emission of polarized light 22
  - 1.7.1 Absorption 22
  - 1.7.2 Absorption by chiral molecules 23
  - 1.7.3 Emission 26
- 1.8 Applications 30
  - 1.8.1 Absorption spectroscopy 30
    - 1.8.1.1 UV/Vis spectroscopy 30
    - 1.8.1.2 Circular dichroism spectroscopy 32
    - 1.8.1.3 IR spectroscopy 35
  - 1.8.2 Luminescence 37
  - 1.8.3 Time-resolved spectroscopy 38
    - 1.8.3.1 General aspects 38
    - 1.8.3.2 Experimental techniques 39
    - 1.8.3.3 Applications of time-resolved techniques 41
      - 1.8.3.3.1 Optical absorption 41

1.8.3.3.2	Luminescence	44
	References	45
<b>2</b>	<b>Photoconductivity</b>	<b>49</b>
2.1	Introductory remarks	49
2.2	Photogeneration of charge carriers	50
2.2.1	General aspects	50
2.2.2	The exciton model	52
2.2.3	Chemical nature of charge carriers	54
2.2.4	Kinetics of charge carrier generation	55
2.2.5	Quantum yield of charge carrier generation	57
2.3	Transport of charge carriers	60
2.4	Mechanism of charge carrier transport in amorphous polymers	64
2.5	Doping	66
2.6	Photoconductive polymers produced by thermal or high-energy radiation treatment	69
2.7	Photoconductive polymers produced by plasma polymerization or glow discharge	70
	References	70
<b>3</b>	<b>Electro-optic and nonlinear optical phenomena</b>	<b>73</b>
3.1	Introductory remarks	73
3.2	Fundamentals	74
3.2.1	Electric field dependence of polarization and dipole moment	74
3.2.2	Electric field dependence of the index of refraction	78
3.3	Characterization techniques	79
3.3.1	Second-order phenomena	79
3.3.1.1	Determination of the hyperpolarizability $\beta$	79
3.3.1.2	Determination of the susceptibility $\chi^{(2)}$	81
3.3.2	Third-order phenomena	82
3.3.2.1	Third harmonic generation	83
3.3.2.2	Self-focusing/defocusing	84
3.3.2.3	Two-photon absorption (TPA)	85
3.3.2.4	Degenerate four-wave mixing (DFWM) and optical phase conjugation	86
3.4	Nonlinear optical materials	87
3.4.1	General aspects	87
3.4.2	Second-order NLO materials	89
3.4.2.1	Guest-host systems and NLO polymers	89
3.4.2.2	Orientation techniques	92
3.4.3	Third-order NLO materials	93
3.5	Applications of NLO polymers	96
3.5.1	Applications relating to telecommunications	96
3.5.2	Applications relating to optical data storage	99

3.5.3	Additional applications	100
	References	101
<b>4</b>	<b>Photorefractivity</b>	<b>103</b>
4.1	The photorefractive effect	103
4.2	Photorefractive formulations	105
4.3	Orientational photorefractivity	107
4.4	Characterization of PR materials	108
4.5	Applications	110
	References	112
<b>5</b>	<b>Photochromism</b>	<b>113</b>
5.1	Introductory remarks	113
5.2	Conformational changes in linear polymers	115
5.2.1	Solutions	115
5.2.2	Membranes	122
5.3	Photocontrol of enzymatic activity	123
5.4	Photoinduced anisotropy (PIA)	123
5.5	Photoalignment of liquid-crystal systems	126
5.6	Photomechanical effects	130
5.6.1	Bulk materials	130
5.6.2	Monolayers	133
5.7	Light-induced activation of second-order NLO properties	134
5.8	Applications	136
5.8.1	Plastic photochromic eyewear	136
5.8.2	Data storage	137
	References	139
<b>6</b>	<b>Technical developments related to photophysical processes in polymers</b>	<b>143</b>
6.1	Electrophotography – Xerography	143
6.2	Polymeric light sources	146
6.2.1	Light-emitting diodes	147
6.2.1.1	General aspects	147
6.2.1.2	Mechanism	150
6.2.1.3	Polarized light from OLEDs	154
6.2.1.4	White-light OLEDs	155
6.2.2	Lasers	156
6.2.2.1	General aspects	156
6.2.2.2	Lasing mechanism	158
6.2.2.3	Optical resonator structures	159
6.2.2.4	Prospects for electrically pumped polymer lasers	162
6.3	Polymers in photovoltaic devices	162
6.4	Polymer optical waveguides	167
6.4.1	General aspects	167

6.4.2	Optical fibers	168
6.4.2.1	Polymer versus silica fibers	168
6.4.2.2	Compositions of polymer optical fibers (POFs)	169
6.4.2.3	Step-index and graded-index polymer optical fibers	170
6.4.3	Polymer planar waveguides	170
6.4.4	Polymer claddings	170
	References	171

## Part II Light-induced chemical processes in polymers

<b>7</b>	<b>Photoreactions in synthetic polymers</b>	177
7.1	Introductory remarks	177
7.1.1	Amplification effects	178
7.1.2	Multiplicity of photoproducts	178
7.1.3	Impurity chromophores	180
7.1.4	Photoreactions of carbonyl groups	182
7.2	Cross-linking	183
7.2.1	Cross-linking by cycloaddition of C=C bonds	184
7.2.2	Cross-linking by polymerization of reactive moieties in pendant groups	186
7.2.3	Cross-linking by photogenerated reactive species	188
7.2.4	Cross-linking by cleavage of phenolic OH groups	192
7.3	Simultaneous cross-linking and main-chain cleavage of linear polymers	193
7.4	Photodegradation of selected polymers	196
7.4.1	Poly(vinyl chloride)	196
7.4.2	Polysilanes	198
7.5	Oxidation	199
7.6	Singlet oxygen reactions	202
7.7	Rearrangements	202
	References	205
<b>8</b>	<b>Photoreactions in biopolymers</b>	207
8.1	Introductory remarks	207
8.2	Direct light effects	211
8.2.1	Photoreactions in deoxyribonucleic acids (DNA)	211
8.2.1.1	Dimeric photoproducts	212
8.2.1.2	Other DNA photoproducts	214
8.2.2	Photoreactions in proteins	214
8.2.2.1	Chemical alterations by UV light	215
8.2.2.2	Formation of stress proteins	216
8.2.2.3	Effects of visible light – photoreceptor action	217
8.2.2.4	Repair of lesions with the aid of DNA photolyases	219
8.2.3	Photoreactions in cellulose	221
8.2.4	Photoreactions in lignins and wood	221

8.3	Photosensitized reactions	222
	References	228
<b>9</b>	<b>Technical developments related to photochemical processes in polymers</b>	<b>231</b>
9.1	Polymers in photolithography	231
9.1.1	Introductory remarks	231
9.1.2	Lithographic processes	231
9.1.2.1	Projection optical lithography	233
9.1.2.2	Maskless lithography	235
9.1.3	Resists	236
9.1.3.1	Classical polymeric resists – positive and negative resist systems	236
9.1.3.2	Chemical amplification resists	239
9.1.3.3	Resists for ArF (193 nm) lithography	242
9.1.3.4	Resists for F <sub>2</sub> (157 nm) lithography	245
9.1.4	The importance of photolithography for macro-, micro-, and nanofabrication	246
9.2	Laser ablation of polymers	248
9.2.1	General aspects	248
9.2.1.1	Introductory remarks	248
9.2.1.2	Phenomenological aspects	248
9.2.1.3	Molecular mechanism	250
9.2.2	Dopant-enhanced ablation	250
9.2.3	Polymers designed for laser ablation	251
9.2.4	Film deposition and synthesis of organic compounds by laser ablation	252
9.2.5	Laser desorption mass spectrometry and matrix-assisted laser desorption/ionization (MALDI)	254
9.2.6	Generation of periodic nanostructures in polymer surfaces	256
9.2.7	Laser plasma thrusters	256
9.3	Stabilization of commercial polymers	257
9.3.1	Introductory remarks	257
9.3.2	UV absorbers	258
9.3.2.1	Phenolic and non-phenolic UV absorbers	258
9.3.2.2	Mechanistic aspects	259
9.3.3	Energy quenchers	260
9.3.4	Chain terminators (radical scavengers)	262
9.3.5	Hydroperoxide decomposers	265
9.3.6	Stabilizer packages and synergism	266
9.3.7	Sacrificial consumption and depletion of stabilizers	267
	References	268

<b>Part III</b>	<b>Light-induced synthesis of polymers</b>
<b>10</b>	<b>Photopolymerization 275</b>
10.1	Introduction 275
10.2	Photoinitiation of free radical polymerizations 276
10.2.1	General remarks 276
10.2.2	Generation of reactive free radicals 276
10.2.2.1	Unimolecular fragmentation of type I photoinitiators 276
10.2.2.2	Bimolecular reactions of type II photoinitiators 279
10.2.2.3	Macromolecular photoinitiators 279
10.2.2.4	Photoinitiators for visible light 281
10.2.2.4.1	Metal-based initiators 282
10.2.2.4.2	Dye/co-initiator systems 284
10.2.2.4.3	Quinones and 1,2-diketones 285
10.2.2.5	Inorganic photoinitiators 287
10.3	Photoinitiation of ionic polymerizations 288
10.3.1	Cationic polymerization 288
10.3.1.1	General remarks 288
10.3.1.2	Generation of reactive cations 290
10.3.1.2.1	Direct photolysis of the initiator 290
10.3.1.2.2	Sensitized photolysis of the initiator 291
10.3.1.2.3	Free-radical-mediated generation of cations 292
10.3.1.2.3.1	Oxidation of radicals 292
10.3.1.2.3.2	Addition-fragmentation reactions 294
10.3.2	Anionic polymerization 295
10.3.2.1	General remarks 295
10.3.2.2	Generation of reactive species 295
10.3.2.2.1	Photo-release of reactive anions 295
10.3.2.2.2	Photo-production of reactive organic bases 296
10.4	Topochemical polymerizations 298
10.4.1	General remarks 298
10.4.2	Topochemical photopolymerization of diacetylenes 299
10.4.3	Topochemical photopolymerization of dialkenes 301
	References 302
<b>11</b>	<b>Technical developments related to photopolymerization 305</b>
11.1	General remarks 305
11.2	Curing of coatings, sealants, and structural adhesives 307
11.2.1	Free radical curing 307
11.2.1.1	Solvent-free formulations 307
11.2.1.2	Waterborn formulations 309
11.2.2	Cationic curing 309
11.2.3	Dual curing 310
11.3	Curing of dental preventive and restorative systems 312
11.4	Stereolithography – microfabrication 313

- 11.5 Printing plates 316
- 11.5.1 Introductory remarks 316
- 11.5.2 Structure of polymer letterpress plates 317
- 11.5.3 Composition of the photosensitive layer 317
- 11.5.4 Generation of the relief structure 317
- 11.6 Curing of printing inks 318
- 11.7 Holography 319
- 11.7.1 Principal aspects 319
- 11.7.2 Mechanism of hologram formation 321
- 11.7.3 Multicolor holographic recording 321
- 11.7.4 Holographic materials 322
- 11.7.5 Holographic applications 323
- 11.8 Light-induced synthesis of block and graft copolymers 324
- 11.8.1 Principal aspects 324
- 11.8.2 Surface modification by photografting 328
- References 329

#### **Part IV Miscellaneous technical developments**

- 12 Polymers in optical memories 337**
- 12.1 General aspects 337
- 12.2 Current optical data storage systems 338
- 12.2.1 Compact disk (CD) and digital versatile disk (DVD) 338
- 12.2.2 Blue-ray disks 340
- 12.3 Future optical data storage systems 341
- 12.3.1 General aspects 341
- 12.3.2 Volume holography 342
- 12.3.2.1 Storage mechanism 342
- 12.3.2.2 Storage materials 343
- 12.3.3 Photo-induced surface relief storing 345
- References 345
  
- 13 Polymeric photosensors 347**
- 13.1 General aspects 347
- 13.2 Polymers as active chemical sensors 349
- 13.2.1 Conjugated polymers 349
- 13.2.1.1 Turn-off fluorescence detection 350
- 13.2.1.2 Turn-on fluorescence detection 350
- 13.2.1.3 ssDNA base sequence detection 352
- 13.2.1.4 Sensors for metal ions 352
- 13.2.1.5 Image sensors 353
- 13.2.2 Optical fiber sensors 353
- 13.2.3 Displacement sensors 354
- 13.3 Polymers as transducer supports 355
- References 356

<b>14</b>	<b>Polymeric photocatalysts</b>	<b>359</b>
14.1	General aspects	359
14.2	Polymers as active photocatalysts	359
14.2.1	Conjugated polymers	359
14.2.2	Linear polymers bearing pendant aromatic groups	361
14.3	Polymers as supports for inorganic photocatalysts	362
