

Contents at a Glance

Foreword	xxxvii
Acknowledgments	xxxix
Introduction	xli

Part I: Laying the Foundation 1

Chapter 1: The Information Architecture Principle	3
Chapter 2: Relational Database Modeling	25
Chapter 3: Exploring SQL Server 2005 Architecture	47
Chapter 4: Installing SQL Server 2005	69
Chapter 5: Client Software Connectivity	91
Chapter 6: Using Management Studio	99

Part II: Manipulating Data with Select 115

Chapter 7: Understanding Basic Query Flow	117
Chapter 8: Using Expressions and Scalar Functions	141
Chapter 9: Merging Data with Joins and Unions	171
Chapter 10: Including Data with Subqueries and CTEs	199
Chapter 11: Aggregating Data	221
Chapter 12: Navigating Hierarchical Data	243
Chapter 13: Using Full-Text Search	257
Chapter 14: Creating Views	279
Chapter 15: Working with Distributed Queries	295
Chapter 16: Modifying Data	317

Part III: Developing with SQL Server 353

Chapter 17: Implementing the Physical Database Schema	355
Chapter 18: Programming with Transact-SQL	397
Chapter 19: Performing Bulk Operations	427
Chapter 20: Kill the Cursor!	431
Chapter 21: Developing Stored Procedures	449
Chapter 22: Building User-Defined Functions	471
Chapter 23: Implementing Triggers	483
Chapter 24: Exploring Advanced T-SQL Solutions	499
Chapter 25: Creating Extensibility with a Data Abstraction Layer	539
Chapter 26: Developing for SQL Server Everywhere	549
Chapter 27: Programming CLR Assemblies within SQL Server	589

Chapter 28: Queueing Data with Service Broker	617
Chapter 29: Persisting Custom Data Types	623
Chapter 30: Programming with ADO.NET 2.0.	643
Chapter 31: Using XML, XPath, and XQuery	677
Chapter 32: Building an SOA Data Store with Web Services	689
Chapter 33: InfoPath and SQL Server 2005	695

PART IV: Enterprise Data Management 703

Chapter 34: Configuring SQL Server	705
Chapter 35: Transferring Databases	741
Chapter 36: Recovery Planning	751
Chapter 37: Maintaining the Database	775
Chapter 38: Automating Database Maintenance with SQL Server Agent	795
Chapter 39: Replicating Data	813
Chapter 40: Securing Databases	857
Chapter 41: Administering SQL Server Express	889

Part V: Business Intelligence 897

Chapter 42: ETL with Integration Services	899
Chapter 43: Business Intelligence with Analysis Services	935
Chapter 44: Data Mining with Analysis Services	973
Chapter 45: Programming MDX Queries	989
Chapter 46: Authoring Reports with Reporting Services	1005
Chapter 47: Administering Reports with Reporting Services	1035
Chapter 48: Analyzing Data with Excel and Data Analyzer	1051

Part VI: Optimization Strategies 1063

Chapter 49: Measuring Performance	1065
Chapter 50: Query Analysis and Index Tuning	1081
Chapter 51: Managing Transactions, Locking, and Blocking	1105
Chapter 52: Providing High Availability	1141
Chapter 53: Scaling Very Large Databases.	1153
Chapter 54: Designing High-Performance Data Access Providers	1173

Part VII: Appendixes 1197

Appendix A: SQL Server 2005 Specifications	1199
Appendix B: Sample Databases	1205

Index	1213

Foreword	xxxvii
Acknowledgments	xxxix
Introduction	xli

Part I: Laying the Foundation **1**

Chapter 1: The Information Architecture Principle	3
Simplicity vs. Complexity	4
Complexity	4
Simplicity	5
The Usability Objective.	5
Suitability of Design	6
Data Store Configurations	6
Master Data Stores Design Styles	8
Data Integrity	11
Entity Integrity	12
Domain Integrity	12
Referential Integrity	12
User-Defined Integrity	12
Transactional Integrity	13
Transactional Faults	14
Isolation Levels	15
The Value of Null	15
Performance	16
Design	16
Set-Based Processing	16
Indexing	17
Partitioning	17
Caching	17
Availability	18
Redundancy	18
Recovery	19
Extensibility	19
Abstraction Layer	19
Generalization	20
Security	20
Restricted Access	20
Information Ownership	20
Audit Trails	21
Optimization Theory and SQL Server	21
Schema Design	21

Queries	22
Indexing	23
Concurrency	23
Advanced Scalability	23
Summary	24
Chapter 2: Relational Database Modeling	25
Modeling Reality	26
Visible Entities	27
Every Tuple (Row) Is an Island	27
Primary Keys	27
Tables, Rows, Columns	28
Identifying Multiple Entities	29
Multiple Objects	29
Relationships Between Objects	29
Organizing or Grouping Objects	30
Consistent Lookup Values	30
Complex Objects	30
Relational Patterns	30
Secondary Entities and Foreign Keys	31
Relationship Cardinality	31
Relationship Optionality	32
Data-Model Diagramming	33
One-to-Many Relationships	33
One-to-One Relationships	34
Supertype/Subtype Relationships	34
Many-to-Many Relationships	35
Category Entities	36
Reflexive Relationships	37
Normalization	38
Entity/Attribute Design Principles	39
Normal Forms	39
Simplicity and Normalization	40
First Normal Form (1NF)	40
The Second Normal Form (2NF)	41
The Third Normal Form (3NF)	42
The Boyce-Codd Normal Form (BCNF)	44
The Fourth Normal Form (4NF)	44
The Fifth Normal Form (5NF)	44
Relational Algebra	45
Summary	46
Chapter 3: Exploring SQL Server 2005 Architecture	47
Data Access Architectures	49
The Client/Server Database Model	49
N-Tier Design	51
Service-Oriented Architecture	52
SQL Server Services	52
Relational Engine	52
Transact-SQL	54
Visual Studio and the CLR	54
Service Broker	55
Replication Services	55

Full-Text Search	56
Notification Services	56
Server Management Objects	56
SQL Server Agent	56
Distributed Transaction Coordinator (DTC)	57
SQL Mail	57
Business Intelligence Services	57
Integration Services	57
Reporting Services	58
Analysis Services	59
SQL Server 2005 Editions	59
Enterprise (Developer) Edition	60
Standard Edition	60
Workgroup Edition	61
SQL Server Express Edition	61
SQL Server Everywhere Edition	62
SQL Server Tools and Components	62
SQL Server Management Studio	62
SQL Server Configuration Manager	63
Surface Area Configuration Tool	63
Business Intelligence Development Studio	64
SQL Integrated Help	64
SQL Profiler	65
Performance Monitor	65
Database Tuning Advisor	65
Command-Line Utilities: SQLCmd, Bulk Copy	65
SQL Server 2005 Feature Pack	66
AdventureWorks	66
Exploring the Metadata	66
System Databases	67
Metadata Views	67
Summary	68

Chapter 4: Installing SQL Server 2005 69

Planning Your Installation	69
Operating System	69
Security Accounts	69
Authentication Mode	72
Server Instances	73
Hardware Recommendations	74
Dedicated Server	74
Copious Memory	74
Using Multiple CPUs	74
Disk-Drive Subsystems	75
RAID Disk Subsystems	75
Network Performance	76
Performing the Installation	76
Attended Installations	76
Unattended Installations	78
Remote Installations	78
Installing in a Clustered Environment	79
Installing Multiple Instances	79
Testing the Installation	79

Upgrading from Previous Versions	80
SQL Server 2005 Upgrade Advisor Tool	80
Upgrading from SQL Server 2000	82
Migrating to SQL Server	82
Migration Assistant	82
Schema Conversion	83
Data Migration	83
Business Logic Conversion	83
Validation and Integration	85
Configuring the Surface Area of SQL Server	85
Surface Area Configuration Tool	86
Command Prompt Utilities	89
Removing SQL Server	89
Summary	90
Chapter 5: Client Software Connectivity	91
Enabling Server Connectivity	91
Server Configuration Manager	91
SQL Native Client Connectivity (SNAC)	92
SQL Server Native Client Features	93
Requirements	93
Database Mirroring	94
Asynchronous Operations	94
Multiple Active Result Sets (MARS)	95
XML Data Types	95
User-Defined Types	95
Large Value Types	95
Handling Expired Passwords	96
Snapshot Isolation	96
Summary	97
Chapter 6: Using Management Studio	99
Organizing the Interface	100
Window Placement	101
The Context Menu	102
The Summary Page	102
Registered Servers	103
Object Explorer	103
Navigating the Tree	104
Filtering Object Explorer	105
The Table Designer	106
Building Database Diagrams	107
The Query Designer	108
Using the Query Editor	110
Connecting to a Server	110
Opening a .sql File	110
Executing SQL Batches	111
Shortcuts and Bookmarks	111
Viewing Query Execution Plans	112
Using the Solution Explorer	113
Introducing the Templates	114
Summary	114

Part II: Manipulating Data with Select 115

Chapter 7: Understanding Basic Query Flow 117

Understanding Query Flow	117
Syntactical Flow of the Query Statement	118
A Graphical View of the Query Statement	118
Logical Flow of the Query Statement	119
Physical Flow of the Query Statement	120
From Clause Data Sources	121
Possible Data Sources	121
Named Ranges	121
[Table Name]	122
Four-Part Table Names	122
Where Conditions	122
Using the Between Search Condition	123
Using the In Search Condition	126
Using the Like Search Condition	127
Multiple Where Conditions	129
Select...Where	130
Ordering the Result Set	131
Specifying the Order by Using Column Names	132
Specifying the Order by Using Expressions	133
Specifying the Order by Using Column Aliases	134
Specifying the Order by Using Column Ordinal Position	134
Order by and Collation	134
Select Distinct	136
Ranking	138
Top	138
The With Ties Option	139
Summary	140

Chapter 8: Using Expressions and Scalar Functions 141

Building Expressions	141
Operators	143
Bitwise Operators	143
Case Expressions	146
Simple Case	146
Boolean Case	147
Working with Nulls	148
Testing for Null	148
Handling Nulls	149
Scalar Functions	154
User Information Functions	155
Data-Time Functions	155
String Functions	158
Soundex Functions	162
Data-Type Conversion Functions	165
Server Environment Information	168
Summary	169

Chapter 9: Merging Data with Joins and Unions	171
Using Joins	172
Inner Joins	174
Creating Inner Joins within SQL Code	175
Number of Rows Returned	176
ANSI SQL 89 Joins	178
Multiple Table Joins	178
Outer Joins	180
Outer Joins and Optional Foreign Keys	182
Full Outer Joins	183
Placing the Conditions within Outer Joins	185
Self-Joins	187
Cross (Unrestricted) Joins	189
Exotic Joins	190
Θ (theta) Joins	190
Multiple-Condition Joins	191
Non-Key Joins	191
Set Difference	192
Using Unions	195
Intersection Union	197
Difference Union/Except	197
Summary	198
Chapter 10: Including Data with Subqueries and CTEs	199
Methods and Locations	199
Simple Subqueries	201
Common Table Expressions	202
Using Scalar Subqueries	203
Using Subqueries as Lists	205
Using Subqueries as Tables	209
Correlated Subqueries	211
Relational Division	215
Relational Division with a Remainder	216
Exact Relational Division	218
Summary	220
Chapter 11: Aggregating Data	221
Simple Aggregations	221
Basic Aggregations	222
Beginning Statistics	224
Grouping within a Result Set	225
Simple Groupings	227
Aggravating Queries	228
Generating Totals	232
Rollup Subtotals	232
Cube Queries	233
Computing Aggregates	234
Building Crosstab Queries	236
Fixed-Column Crosstab Queries	237
Dynamic Crosstab Queries	240
Summary	242

Chapter 12: Navigating Hierarchical Data	243
Adjacency List Schema Patterns	243
Basic Adjacency List Pattern	244
Adjacency List Variations	245
Navigating the Adjacency List	248
Using a Standard select Statement	248
Using a Recursive Cursor	249
Using a Set-Based Solution	251
Using a User-Defined Function	252
Using Recursive Common Table Expressions	254
Summary	255
Chapter 13: Using Full-Text Search	257
Configuring Full-Text Search Catalogs	258
Creating a Catalog with the Wizard	259
Creating a Catalog with T-SQL Code	260
Pushing Data to the Full-Text Index	261
Maintaining a Catalog with Management Studio	262
Maintaining a Catalog in T-SQL Code	263
Noise Files	264
Word Searches	265
The Contains Function	265
ContainsTable	266
Advanced Search Options	267
Multiple Word Searches	267
Searches with Wildcards	269
Phrase Searches	269
Word-Proximity Searches	270
Word-Inflection Searches	270
Thesaurus Searches	271
Variable-Word-Weight Searches	272
Fuzzy Searches	273
Freetext	274
FreetextTable	274
Binary Object Indexing	275
Performance	277
Summary	277
Chapter 14: Creating Views	279
Why Use Views?	279
Working with Views	281
Creating Views Using Management Studio	281
Creating Views with DDL Code	283
Order By and Views	284
View Restrictions	284
Executing Views	285
Locking Down the View	285
Protecting the Data	285
Protecting the View	287
Updating through Views	288
Nesting Views	290

Using Synonyms	292
Summary	293
Chapter 15: Working with Distributed Queries	295
Distributed Query Concepts	295
Accessing a Local SQL Server Database	297
Linking to External Data Sources	298
Linking with Management Studio	298
Linking with T-SQL	300
Linking with Non-SQL Server Data Sources	303
Developing Distributed Queries	305
Distributed Queries and Management Studio	306
Distributed Views	306
Local-Distributed Queries	306
Pass-Through Distributed Queries	310
Distributed Transactions	312
Distributed Transaction Coordinator	312
Developing Distributed Transactions	313
Monitoring Distributed Transactions	314
Summary	315
Chapter 16: Modifying Data	317
Inserting Data	318
Inserting One Row of Values	319
Inserting a Result Set from Select	321
Inserting the Result Set from a Stored Procedure	322
Creating a Default Row	324
Creating a Table While Inserting Data	325
Updating Data	327
Updating a Single Table	328
Performing Global Search and Replaces	329
Referencing Multiple Tables While Updating Data	329
Deleting Data	333
Referencing Multiple Tables While Deleting	333
Cascading Deletes	334
Alternatives to Physically Deleting Data	335
Returning Modified Data	336
Returning Data from an Insert	336
Returning Data from an Update	337
Returning Data from a Delete	337
Returning Data into a @Table Variable	337
Potential Data-Modification Obstacles	338
Data Type/Length Obstacles	339
Primary Key Obstacles	339
Foreign Key Obstacles	343
Unique Index Obstacles	344
Null and Default Obstacles	345
Check Constraint Obstacles	345
Instead of Trigger Obstacles	346
After Trigger Obstacles	347
Calculated Columns	348
Non-Updateable View Obstacles	349

Views with the with check option Obstacles	349
Security Obstacles	350
Summary	351

Part III: Developing with SQL Server

353

Chapter 17: Implementing the Physical Database Schema 355

Designing the Physical Database Schema	356
Physical Schema Design Options	356
Refining the Data Patterns	357
Designing for Performance.	357
Designing for Extensibility	358
Responsible Denormalization	358
Creating the Database	359
The Create DDL Command.	359
Database-File Concepts.	361
Configuring File Growth	362
Using Multiple Files	363
Planning Multiple Filegroups	366
Creating Tables	367
Designing Tables Using Management Studio	367
Working with SQL Scripts	369
Schemas	370
Table and Column Names	371
Filegroups	372
Creating Primary Keys	372
Primary Keys	373
Creating Foreign Keys	377
Creating User-Data Columns	381
Column Data Types	382
Calculated Columns.	385
Column Constraints and Defaults	385
Data Catalog	390
DDL Triggers	391
Creating and Altering DDL Triggers.	392
EventData()	393
Enabling and Disabling DDL Triggers.	394
Summary	395

Chapter 18: Programming with Transact-SQL 397

Transact-SQL Fundamentals	398
T-SQL Batches	398
T-SQL Formatting	399
Debugging T-SQL	401
Variables	401
Variable Default and Scope	402
Using the Set and Select Commands	402
Conditional Select.	403
Using Variables within SQL Queries	404
Multiple Assignment Variables	404

Procedural Flow	405
If	405
While	406
Goto.	407
Examining SQL Server with Code.	408
sp_help.	408
Global Variables.	409
Temporary Tables and Table Variables	411
Local Temporary Tables	411
Global Temporary Tables	412
Table Variables	412
Dynamic SQL	413
Executing Dynamic SQL	413
sp_executesql.	414
Developing Dynamic SQL Code	414
Error Handling	416
Try...Catch	416
Legacy @@Error Global Variable	418
@@RowCount Global Variable	419
Raiserror	420
Catch Block	424
T-SQL Fatal Errors.	424
Summary	425
Chapter 19: Performing Bulk Operations.	427
Bulk Insert.	428
Bulk Insert Options	429
BCP	430
Summary	430
Chapter 20: Kill the Cursor!.	431
Anatomy of a Cursor	431
The Five Steps to Cursoring	432
Managing the Cursor	432
Update Cursors	434
Cursor Scope	434
Cursors and Transactions	435
Cursor Strategies	435
Complex-Logic Solutions	436
The Logic Code	437
SQL-92 Cursor with Stored Procedure	439
Fast-Forward Cursor with Stored Procedure	439
Fast-Forward Cursor and User-Defined Function	440
Update Cursor with Stored Procedure	441
Update Query with User-Defined Function	441
Multiple Queries.	442
Query with Case Expression.	443
Performance Analysis	444
Denormalizing a List Example	445
Summary	447

Chapter 21: Developing Stored Procedures	449
Managing Stored Procedures	450
Create, Alter, and Drop	450
Returning a Record Set	451
Compiling Stored Procedures	451
Stored Procedure Encryption	452
System Stored Procedures	453
Passing Data to Stored Procedures.	453
Input Parameters	453
Parameter Defaults	454
Returning Data from Stored Procedures.	455
Output Parameters	455
Using the Return Command	457
Path and Scope of Returning Data	457
Using Stored Procedures within Queries	458
Executing Remote Stored Procedures	459
The Complete Stored Procedure	460
The pGetPrice Stored Procedure	460
The pOrder_AddNew Stored Procedure	462
The pOrder_AddItem Stored Procedure	466
Adding an Order.	468
Summary	469
Chapter 22: Building User-Defined Functions	471
Scalar Functions	472
Creating a Scalar Function	473
Calling a Scalar Function	475
Creating Functions with Schema Binding	475
Inline Table-Valued Functions.	476
Creating an Inline Table-Valued Function	476
Calling an Inline Table-Valued Function	476
Using Parameters	477
Correlated User Defined Functions	478
Multi-Statement Table-Valued Functions	480
Creating a Multi-Statement Table-Valued Function	480
Calling the Function	481
Summary	481
Chapter 23: Implementing Triggers	483
Trigger Basics.	483
Transaction Flow	484
Creating Triggers	485
After Triggers	486
Instead of Triggers	487
Trigger Limitations	488
Disabling Triggers.	488
Listing Triggers	489
Triggers and Security.	489
Working with the Transaction	490
Determining the Updated Columns.	490
Inserted and Deleted Logical Tables	491
Developing Multi-Row Enabled-Triggers.	492

Multiple-Trigger Interaction	494
Trigger Organization	494
Nested Triggers	495
Recursive Triggers	495
Instead of and After Triggers	497
Multiple after Triggers	497
Summary	498
Chapter 24: Exploring Advanced T-SQL Solutions	499
Complex Business Rule Validation	500
Complex Referential Integrity	501
Row-Level Custom Security	503
The Security Table	504
The Security-Check Stored Procedure	511
The Security-Check Function	512
Using the NT Login	513
The Security-Check Trigger	515
Auditing Data Changes	516
The Audit Table	516
The Fixed Audit Trail Trigger	517
Rolling Back from the Audit Trail	520
Auditing Complications	521
The Dynamic Audit-Trail Trigger and Procedure	522
Transaction-Aggregation Handling	528
The Inventory-Transaction Trigger	529
The Inventory Trigger	531
Logically Deleting Data	532
Logical Delete Triggers	533
Undeleting a Logically Deleted Row	534
Filtering Out Logically Deleted Rows	535
Cascading Logical Deletes	535
Degrees of Inactivity	536
Archiving Data	536
Summary	537
Chapter 25: Creating Extensibility with a Data Abstraction Layer	539
The AddNew Stored Procedure	540
The Fetch Stored Procedure	542
The Update Stored Procedure	543
Update with RowVersion	543
Minimal-Update	545
The Delete Stored Procedure	547
Summary	548
Chapter 26: Developing for SQL Server Everywhere	549
An Overview of SQL Server 2005 Everywhere Edition	550
History	550
Concepts	551
What's New in SQL Server 2005 Everywhere Edition	555
Getting Started with SQL Everywhere	556
Installing SQL Everywhere	556
Query Analyzer 3.0	559

Creating a SQL Everywhere Database	562
Upgrading an Existing SQL CE 2.0 Database	575
Synchronizing Data.	576
Remote Data Access	577
Merge Replication	578
Web Services	579
Packaging and Deployment	580
Creating the Database Programmatically	581
Deploying a Starter Database with the Mobile Application	581
Creating the Database Dynamically through Merge Replication	581
Other Approaches	581
Security	581
Password Protection	582
Encryption	582
Secure Data Synchronization	582
Tuning, Maintenance, and Administration	583
Measuring and Improving Query Performance	583
SQL Everywhere Maintenance.	584
Repairing a Damaged SQL Everywhere Database.	585
Keeping Merge Replication Healthy	586
More Information.	587
Summary	587

Chapter 27: Programming CLR Assemblies within SQL Server 589

.NET Framework Crash Course	590
Assemblies.	591
App Domains	592
Overview of the CLR SQL Server Types	595
CLR Integration .NET Type Attributes	596
Shared Features of SQL Server CLR Types.	597
Data Types	598
.NET Methods That Support CLR Integration.	601
T-SQL CLR DDL Commands and Catalog Views	602
Assemblies.	603
Database Objects	603
Building Database Types with Visual Studio 2005	604
Creating a CLR Project	604
Coding a CLR Stored Procedure.	608
CLR Functions	611
Using the CLR versus Using T-SQL	613
T-SQL Is Not Going Away	614
Summary	615

Chapter 28: Queueing Data with Service Broker 617

Configuring a Message Queue.	617
Working with Dialogs.	618
Sending a Message to the Queue	619
Receiving a Message	619
Monitoring Service Broker	621
Summary	622

Chapter 29: Persisting Custom Data Types	623
Creating CLR Integration User-Defined Types	625
Satisfying the Requirements	626
Coding a CLR UDT with Visual Studio	628
Testing and Debugging the UDT.	635
Performance Considerations	635
CLR Integration UDT Deployment Details	637
Strongly Named Assemblies and the GAC	637
Creating Strongly Named .NET Assemblies	638
Maintaining the UDT	640
Summary	640
Chapter 30: Programming with ADO.NET 2.0	643
An Overview of ADO.NET	644
ADO	645
The ADO Object Model.	649
ADO.NET	658
ADO.NET in Visual Studio 2005	668
Server Explorer	669
Debugging ADO.NET	669
Application Tracing.	670
Application Building Basics	671
Connecting to SQL Server	671
Data Adapters	672
DataReaders and Recordsets	672
Streams.	673
Asynchronous Execution.	673
Using a Single Database Value.	674
Data Modification	674
Binding to Controls	675
Summary	675
Chapter 31: Using XML, XPath, and XQuery	677
XML Data Type	678
Casting and Converting	678
XML Type Limitations	678
XML Schema Collections.	679
XML Indexes.	680
Querying XML Data	680
XPath	680
FLWOR Queries	681
Merging XQuery with Select	681
Decomposing XML SQL Server	682
Reading XML into SQL Server	683
Creating XML with SQL Server 2005	685
Summary	687

Chapter 32: Building an SOA Data Store with Web Services	689
HTTP Listening	690
About HTTP.sys	690
Implicit Endpoints	691
Explicit Endpoints.	691
WSDL.	692
Endpoint Security	693
Summary	693
Chapter 33: InfoPath and SQL Server 2005	695
Overview of InfoPath 2003	695
Automatic Data Validation	696
Offline Form Completion	696
Conditional Formatting.	696
Security in InfoPath 2003.	697
InfoPath Object Model	698
Scripting and .NET Code	698
Note.	698
Creating a Form Template.	698
Other Features of InfoPath	702
Summary	702

Part IV: Enterprise Data Management

703

Chapter 34: Configuring SQL Server.	705
Setting the Options.	705
Configuring the Server	705
Configuring the Database	708
Configuring the Connection	709
Configuration Options	711
Displaying the Advanced Options	711
Start/Stop Configuration Properties	712
Memory-Configuration Properties	714
Processor-Configuration Properties	720
Security-Configuration Properties	723
Connection-Configuration Properties	725
Server-Configuration Properties	728
Index-Configuration Properties	730
Configuring Database Auto Options	731
Cursor-Configuration Properties	733
SQL ANSI-Configuration Properties	734
Trigger Configuration Properties	737
Database-State-Configuration Properties	737
Recovery-Configuration Properties.	739
Summary	740

Chapter 35: Transferring Databases	741
Copy Database Wizard	742
Working with SQL Script	746
Detaching and Attaching	748
Summary	750
Chapter 36: Recovery Planning	751
Recovery Concepts	752
Recovery Models	753
Simple Recovery Model	754
The Full Recovery Model	754
Bulk-Logged Recovery Model	756
Setting the Recovery Model	757
Modifying Recovery Models	757
Backing Up the Database	758
Backup Destination	758
Backup Rotation	758
Performing Backup with Management Studio	759
Backing Up the Database with Code	760
Verifying the Backup with Code	762
Working with the Transaction Log	762
Inside the Transaction Log	762
Backing Up the Transaction Log	764
Truncating the Log	764
The Transaction Log and Simple Recovery Model	765
Recovery Operations	765
Detecting the Problem	765
Recovery Sequences	766
Performing the Restore with Management Studio	767
Restoring with T-SQL Code	769
System Databases Recovery	772
Master Database	773
MSDB System Database	773
Performing a Complete Recovery	774
Summary	774
Chapter 37: Maintaining the Database	775
DBCC Commands	775
Database Integrity	776
Index Maintenance	780
Database File Size	784
Miscellaneous DBCC Commands	787
Managing Database Maintenance	788
Planning Database Maintenance	788
Maintenance Plan Wizard	788
Command-Line Maintenance	793
Monitoring Database Maintenance	794
Summary	794
Chapter 38: Automating Database Maintenance with SQL Server Agent	795
Setting Up SQL Server Agent	795
Understanding Alerts, Operators, and Jobs	799

Managing Operators	799
Managing Alerts	800
Creating User-Defined Errors	801
Creating an Alert	801
Managing Jobs	804
Creating a Job Category	805
Creating a Job Definition	806
Setting Up the Job Steps	807
Configuring a Job Schedule	810
Handling Completion-, Success-, and Failure-Notification Messages	810
Summary	811

Chapter 39: Replicating Data 813

Why Replicate Data?	813
Fault Tolerance/Disaster Recovery	813
Application Requirements	815
Performance Gains	815
Data Distribution	815
Comparing Options for Distributing Data	816
The Microsoft Model	817
Publisher	818
Subscriber	818
Distributor	818
Central Publisher	818
Central Subscriber	818
Republishing	819
Peer-to-Peer	819
Article	819
Push Subscriptions	820
Pull Subscriptions	820
Replication Types	820
Snapshot Replication	821
Snapshot Replication with Immediate Updating	821
Snapshot Replication with Queued Updating	822
Snapshot Replication with Immediate Updating and Queued Failover	822
Transactional Replication	822
Snapshot Agent	823
Log Reader Agent	823
Distribution Agent	823
Peer-to-Peer Replication	824
Bi-directional Transactional Replication	824
Transactional Replication with Immediate Updating	824
Transactional Replication with Queued Updating	824
Transactional Replication with Immediate Updating and Queued Failover	825
Transactional Replication over the Internet	825
Merge Replication	825
Merge Replication and SQL CE or SQL Mobile Subscribers	827
Merge Replication over the Internet	828
New in SQL 2005 Replication	828
Restartable Snapshots	828
Oracle Publishing	828
Very Tight Security	828
Peer-to-Peer Replication Model	828

Replicating All DDL	829
Replicating Full-Text Indexes	829
Allowing Anonymous Subscriptions for All Publications	829
Logical Records in Merge Replication	829
Precomputed Partitions	829
Updates to Unique Keys	830
Custom Conflict Handling through SQL RMO	830
Numerous Performance Improvements	830
Latency Tokens	830
Transactional Parallelism	830
Download Only Articles	830
Replication Monitor.	831
Merge Replication over HTTPS	832
Merge Replication Performance and Scalability Improvements	832
SQL RMO	832
Simplified Wizards	833
Initializing a Subscriber	833
Configuring Replication	834
Using a Local Distributor.	834
Using a Remote Distributor	834
Creating Snapshot Replication Publications	835
Creating Transactional Replication Publications	837
Creating Bi-directional Transactional Replication Publications.	841
Creating Oracle Publications	842
Creating Peer-to-Peer Replication Publications	843
Creating Merge Replication Publications	844
Creating Subscriptions	846
Creating Web Synchronizing Subscriptions	848
Monitoring Your Replication Solution	852
Agent Profiles	852
All Subscriptions	853
Warnings and Agents	853
Modifying Replication Agent Properties	854
Tracer Tokens	854
Replication Performance	855
Replication Troubleshooting	856
Summary	856

Chapter 40: Securing Databases. 857

Security Concepts	858
Server-Level Security	859
Database-Level Security	859
Object Ownership.	859
Windows Security	860
Windows Security.	860
SQL Server Login	860
Server Security	861
SQL Server Authentication Mode.	861
Windows Authentication.	862
SQL Server Logins.	866
Server Roles	867
Database Security	869
Guest Logins.	869
Granting Access to the Database	869

Fixed Database Roles	871
Securables Permissions	872
Application Roles	873
Object Security	873
Object Permissions	874
Standard Database Roles	875
Object Security and Management Studio	877
A Sample Security Model Example	878
C2-Level Security	880
Views and Security	880
Cryptography	881
Introduction to Cryptography	881
The SQL Server-Crypto Hierarchy	882
Encrypting with a Passphrase	882
Encrypting with a Symmetric Key	884
Preventing SQL Injection	886
Appending Malicious Code	886
Or 1=1	886
Password? What Password?	887
Prevention	887
Summary	887

Chapter 41: Administering SQL Server Express 889

Installing SQL Server Express	890
Using Command-Line Parameters to Install SSE Silently	891
Using INI Files to Install SSE	894
SQL Server Management Studio Express Edition	895
Summary	896

Part V: Business Intelligence

897

Chapter 42: ETL with Integration Services 899

Design Environment	900
Connection Managers	902
Variables	902
Configuring Elements	904
Event Handlers	907
Executing a Package in Development	908
Integration Services Package Elements	909
Connection Managers	909
Control Flow Elements	912
Data Flow Components	918
Maintainable and Manageable Packages	928
Logging	929
Package Configurations	930
Checkpoint Restart	931
Deploying Packages	932
Installing Packages	932
Executing Packages	932
Summary	933

Chapter 43: Business Intelligence with Analysis Services	935
Data Warehousing	936
Star Schema	936
Consistency	937
Loading Data.	938
Analysis Services Quick Start	939
Analysis Services Architecture	940
Unified Dimensional Model	941
Server.	941
Client	942
Building a Database	942
Business Intelligence Development Studio	942
Data Sources.	943
Data Source View	944
Creating a Cube	947
Dimensions	948
Dimension Designer	948
Changing Data in Dimensions	954
Beyond Regular Dimensions.	955
Dimension Refinements	957
Cubes	959
Cube Structure	960
Dimension Usage	962
KPIs	963
Actions	964
Partitions.	964
Perspectives	966
Data Storage.	967
SQL Server Notifications	968
Client-Initiated Notifications.	968
Scheduled Polling Notifications	968
Data Integrity	969
Null Processing	969
Unknown Member.	970
Error Configuration.	971
Summary	972
Chapter 44: Data Mining with Analysis Services	973
The Data Mining Process	974
Modeling with Analysis Services	975
Algorithms.	982
Decision Trees.	982
Linear Regression	983
Clustering	983
Sequence Clustering	984
Neural Network	985
Logistic Regression	986
Naive Bayes	986
Association Rules	986
Time Series	987
OLAP Integration	987
Summary	988

Chapter 45: Programming MDX Queries	989
Basic Select Query	990
Cube Addressing	990
Dimension Structure	991
Basic SELECT Statement	992
Advanced Select Query	996
Subcubes	997
WITH Clause	997
Dimension Considerations	1001
MDX Scripting	1002
Calculated Members and Named Sets	1003
Adding Business Intelligence	1003
Summary	1004
Chapter 46: Authoring Reports with Reporting Services.	1005
Anatomy of a Report	1005
Report Definition Language (RDL)	1005
Data Sources	1006
Reporting Services Data Sets	1008
Query Parameters and Report Parameters	1008
Report Content and Layout	1009
The Report Authoring Process	1010
Creating a Reporting Services Project in Visual Studio 2005	1010
Steps to Create a Report	1011
Using the Report Wizard to Create Reports	1011
Authoring a Report from Scratch	1011
Working with Data	1014
Working with SQL in the Report Designer	1014
Using Query Parameters to Select and Filter Data	1015
Adding Calculated Fields to a Data Set	1018
Working with XML Data Sources	1019
Working with Expressions	1020
Designing the Report Layout	1023
Design Basics	1023
Using the Table and Matrix Property Pages	1026
Grouping and Sorting Data in a Table and Matrix	1027
Illustrating Data with Charts	1030
Adding a Pie Chart to a Report	1032
Summary	1032
Chapter 47: Administering Reports with Reporting Services	1035
Deploying Reporting Services Reports	1036
Deploying Reports Using Visual Studio 2005	1036
Deploying Reports Using the Report Manager	1038
Deploying Reports Programmatically Using the Reporting Services Web Service	1039
Configuring Reporting Services Using the Report Manager	1039
Configuring Reporting Services Site Settings	1039
Administering Security	1041
Working with Linked Reports	1044
Creating Linked Reports	1044

Leveraging the Power of Subscriptions	1045
Creating a Data-Driven Subscription	1046
Summary	1049

Chapter 48: Analyzing Data with Excel and Data Analyzer 1051

Excel PivotTables	1052
Multidimensional Connections	1053
Relational Connection	1054
PivotTable Construction	1056
PivotChart Construction	1058
Excel Data Ranges	1059
Data Analyzer	1060
Creating a View	1060
Formatting a View	1061
Summary	1062

Part VI: Optimization Strategies 1063

Chapter 49: Measuring Performance 1065

Measuring Accuracy	1065
Using Performance Monitor	1066
System Monitor	1066
Counter Logs	1069
Using SQL Server Profiler	1071
Defining a New Trace	1071
Selecting Events	1072
Filtering Events	1073
Organizing Columns	1073
Using the Profiler Trace	1073
Integrating Performance Monitor Data	1074
Using SQL Trace	1075
Using Transact-SQL	1076
Using Dynamic Management Views	1076
Using GetDate()	1076
Using Statistics	1077
The Database Performance KPI	1077
Repeatable Performance Testing	1078
Production Performance Data	1079
Scalability Performance Load Testing	1080
Summary	1080

Chapter 50: Query Analysis and Index Tuning 1081

A Holistic Approach to Index Tuning	1081
Indexing	1082
Index Basics	1082
Creating Indexes	1084
Index Options	1087
Creating Base Indexes	1090
Query Analysis	1090
Viewing Query Execution Plans	1091
Using the Showplans	1092
Interpreting the Query Execution Plan	1092

Index Tuning	1095
Missing Indexes	1095
Bookmark Lookup	1097
Optimizable SARGs	1098
Index Selectivity	1098
Reusing Query Execution Plans	1099
A Comprehensive Index Strategy	1100
Using the Database Engine Tuning Advisor	1102
Summary	1103
Chapter 51: Managing Transactions, Locking, and Blocking	1105
Transactional Basics	1106
Transactional Integrity	1107
The ACID Properties	1107
Transactional Faults	1108
Isolation Levels	1113
Transaction-Log Architecture	1115
Transaction Log Sequence	1115
Transaction-Log Recovery	1119
Understanding SQL Server Locking	1119
Lock Granularity	1120
Lock Mode	1120
Lock Duration	1123
Monitoring Locking and Blocking	1123
Using Profiler	1124
Controlling SQL Server Locking	1126
Setting the Connection Isolation Level	1126
Using Database Snapshot Isolation	1127
Using Locking Hints	1129
Index-Level Locking Restrictions	1130
Controlling Lock Timeouts	1131
Evaluating Database Concurrency Performance	1131
Application Locks	1131
Deadlocks	1133
Creating a Deadlock	1133
Automatic Deadlock Detection	1135
Handling Deadlocks	1136
Minimizing Deadlocks	1136
Application Locking Design	1136
Implementing Optimistic Locking	1136
Lost Updates	1137
Transaction Performance Strategies	1139
Summary	1140
Chapter 52: Providing High Availability	1141
Availability Testing	1142
Warm-Standby Availability	1142
Log Shipping	1143
Shipping the Users	1146
Returning to the Original Primary Server	1146
Failover Servers and Clustering	1147
Failover SQL Server Installs	1147
Configuring	1148

Database Mirroring	1149
Prerequisites	1150
Configuring	1150
Architecting the Environment	1151
Summary	1152
Chapter 53: Scaling Very Large Databases	1153
Optimization Theory and Scalability	1154
Scaling Out the Platform	1154
Scaling Up the Solution	1156
Partitioned Tables and Indexes	1157
Creating the Partition Function	1158
Creating Partition Schemes	1159
Creating the Partition Table	1160
Querying Partition Tables	1162
Altering Partition Tables	1164
Switching Tables	1164
Rolling Partitions	1167
Indexing Partitioned Tables	1167
Removing Partitioning	1168
Working with Indexed Views	1168
Indexed Views and Queries	1170
Updating Indexed Views	1171
Summary	1171
Chapter 54: Designing High-Performance Data Access Providers	1173
Data Access Concepts	1174
Why Good Data Access Matters	1174
Defining Requirements	1174
Data Access Objects	1175
How the DAO Scenario Works	1175
The Cons of the DAO Pattern	1178
Factories	1179
The Pros of the Factory Pattern	1182
The Cons of the Factory Pattern	1182
Data Providers	1182
How a Data Provider Works	1185
Pros of the Data Provider Pattern	1194
Cons of the Data Provider Pattern	1194
Summary	1194
Part VII: Appendixes	1197
Appendix A: SQL Server 2005 Specifications	1199
Appendix B: Sample Databases	1205
Index	1213
