Preface	ix
1 Breaking the Black Box	1
1.1 New popularity, old confusion	1
1.2 The challenges of understanding hedge funds	2
1.3 Leaving Alphaville	3
1.4 The beauty of beta	4
1.5 Alternative versus traditional beta	4
1.6 The replication revolution	5
1.7 Full disclosure	6
2 What Are Hedge Funds, Where Did They Come From, and Where Are They Going?	7
2.1 Characteristics of hedge funds	7
2.2 Hedge funds as an asset class	11
2.3 Taxonomy of hedge funds	11
2.4 Myths, misperceptions, and realities about hedge funds	15
2.5 A short history of hedge funds	22
2.6 The hedge fund industry today	26
2.7 The future of hedge funds – opportunities and challenges	30
3 The Individual Hedge Fund Strategies' Characteristics	37
3.1 Equity Hedged – Long/Short Equity	37
3.2 Equity Hedged – Equity Market Neutral	41
3.3 Equity Hedged – Short Selling	44
3.4 Relative Value – general	45
3.5 Relative Value – Fixed Income Arbitrage	46
3.6 Relative Value – Convertible Arbitrage	51
3.7 Relative Value – Volatility Arbitrage	58
3.8 Relative Value – Capital Structure Arbitrage	60
3.9 Event Driven – general	62
3.10 Event Driven – Merger Arbitrage	64
3.11 Event Driven – Distressed Securities	67

3.12	Event Driven – Regulation D	69
3.13	Opportunistic – Global Macro	70
3.14	Managed Futures	75
3.15	Managed Futures – Systematic	76
3.16	Managed Futures – Discretionary	79
3.17	Conclusion of the chapter	81
4	Empirical Return and Risk Properties of Hedge Funds	83
4.1	When the Sharpe ratio is not sharp enough	83
4.2	Challenges of hedge fund performance measurement – the issue with hedge fund indices	84
4.3	Sources of empirical data	89
4.4	Risk and return properties of hedge fund strategies	90
4.5	Comparison with equities and bonds	93
4.6	Deviation from normal distribution	94
4.7	Unconditional correlation properties	94
4.8	Conditional returns and correlations	98
4.9	Hedge fund behavior in extreme market situations	105
4.10	Benefits of hedge funds in a traditional portfolio	107
4.11	Quantitative portfolio optimization for hedge funds revisited	109
4.12	Summary of empirical properties	112
4.13	Appendix: Data providers for past hedge fund performance	113
5	The Drivers of Hedge Fund Returns	117
5.1	Alpha versus beta	117
5.2	The enigma of hedge fund returns	119
5.3	Hedge fund returns: how much is alpha?	121
5.4	The efficient market hypothesis	123
5.5	Questioning the efficient market hypothesis: behavioral finance	125
5.6	The theoretical framework of modern finance: asset pricing models and the interpretations of alpha	128
5.7	Systematic risk premia: the prevalence of beta in the global capital markets	131
5.8	Risk premia and economic functions	138
5.9	Market inefficiencies: the ‘search for alpha’	140
5.10	An illustration of the nature of hedge fund returns	143
5.11	The decrease of alpha	145
5.12	The beauty of alternative beta	147
5.13	The future of hedge fund capacity	149
5.14	Momentum and value	150
5.15	Active strategies and option-like returns	152
5.16	Why manager skill matters	154
5.17	Buyer beware: some final words of caution about hedge fund returns	155
6	A First Approach to Hedge Fund Replication – Linear Factor Models and Time Series Replication Models	157
6.1	Revisiting Sharpe’s approach	157
6.2	Understanding linear factor analysis: criteria for the factor model approach	158

6.3	The model specification problem	159
6.4	The data quality problem	160
6.5	The development of hedge fund factor models	161
6.6	Basic and advanced factor models for hedge fund strategies	161
6.7	How good are our models?	165
6.8	Variability of risk exposures and persistence of factor loadings	166
6.9	Can we create hedge fund replications with linear factor models?	168
6.10	The limitations of linear factor models	176
6.11	Currently available hedge fund replication products based on RFS	178
6.12	Summary and conclusion of the chapter	180
7	The Distributional Approach	183
7.1	Being less ambitious	183
7.2	General principles of the distributional approach	184
7.3	Integration of correlations and dependencies	186
7.4	Limitations of the replication approach	187
7.5	The empirical results of the distributional method	187
7.6	Conclusion for the distributional approach	188
8	Bottom up: Extraction of Alternative Beta and ‘Alternative Beta Strategies’	191
8.1	The rule-based alternative	191
8.2	What hedge fund investors really want	193
8.3	The first ‘alternative beta’ strategies	194
8.4	Relating hedge fund returns and risk premia: what we can model	196
8.5	Alternative beta strategies for individual hedge fund styles and strategy sectors	197
8.6	New exotic beta	208
8.7	The question of asset allocation	209
8.8	The limitations of hedge fund replication	210
8.9	A note on the issue of liquidity	210
8.10	Summary	211
9	Hedge Fund Portfolio Management with Alternative Beta Strategies	213
9.1	The tasks of the hedge fund portfolio manager	213
9.2	The lure of saving fees	214
9.3	The limitations of hedge fund replication	215
9.4	The role of asset allocation	216
9.5	Separation of tasks for the fund of funds managers	216
9.6	The idea of a core–satellite approach to hedge fund investing	217
9.7	Isolating pure alpha	218
9.8	The first part in the investment process: allocation to strategy sectors	218
9.9	Implementation of tactical asset allocation in a core–satellite approach to hedge fund portfolios	223
9.10	The second element: manager selection	226
9.11	Active post-investment risk management	231
9.12	Summary and conclusion	238

10 Replication and the Future of Hedge Funds	239
10.1 Beyond alpha	239
10.2 What do investors say so far?	239
10.3 Replication and the four key challenges to the hedge fund industry	240
10.4 Replication in reality	241
10.5 Replication and hedge fund growth	242
10.6 Hedge funds in the broader context: The future of absolute return investment	243
References and Bibliography	245
Index	253
