

CONTENTS

Introduction	1
<i>Ellen A. Skinner, Melanie J. Zimmer-Gembeck</i>	
1. Challenges to the Developmental Study of Coping	5
<i>Ellen A. Skinner, Melanie J. Zimmer-Gembeck</i>	
This chapter explores how developmental conceptualizations that emphasize coping as regulation under stress open the way to explore synergies between coping and theoretical and empirical work on age-graded changes in how regulatory processes function under stress.	
2. The Influence of Temperament on the Development of Coping: The Role of Maturation and Experience	19
<i>M. Rosario Rueda, Mary K. Rothbart</i>	
This chapter examines how individual differences in temperament are conceptually linked to the development of coping and how this association is modulated by the maturation of brain systems underlying temperament.	
3. Emotion-Focused Coping in Young Children: Self and Self-Regulatory Processes	33
<i>Claire B. Kopp</i>	
This chapter explores pathways toward emotion-focused coping among typically developing young children and their more or less average parents—portraying characteristic developmental patterns, demands, and stresses.	
4. Adaptive Coping Under Conditions of Extreme Stress: Multilevel Influences on the Determinants of Resilience in Maltreated Children	47
<i>Dante Cicchetti, Fred A. Rogosch</i>	
The study of resilience in maltreated children serves as an exemplar of coping under severe stress. This chapter presents a perspective using multiple levels of analysis and incorporating personality, neuroendocrine, neurophysiological, and genetic contributions to adaptive coping.	
5. How Social and Cultural Contexts Shape the Development of Coping: Youth in the Inner City as an Example	61
<i>Patrick Tolan, Kathryn Grant</i>	
This chapter argues that the patterns of coping that children and youth show depend on the stresses they face. Therefore, it is difficult to understand or study coping, or promote it in interventions, unless it is conceptualized as embedded within the overall ecology of stress, including the demands and resources that influence its use, utility, and impact.	

6. How the Study of Regulation Can Inform the Study of Coping	75
<i>Nancy Eisenberg, Carlos Valiente, Michael J. Sulik</i>	
This chapter discusses several topics of current interest in the emotion-related regulation literature that are relevant to coping: conceptual issues related to definitions and types of coping, types of physiological responses deemed to tap emotion regulation that could be exploited in work on coping, and findings on the socialization of self-regulation that have implications for understanding the development of coping.	
7. Coping, Regulation, and Development During Childhood and Adolescence	87
<i>Bruce E. Compas</i>	
This chapter identifies four challenges to the study of the development of coping and regulation and outlines specific theoretical and empirical strategies for addressing them. How researchers resolve these challenges will affect greatly the future contributions that our understanding of coping will make to basic and applied developmental science.
