

Contents

List of Contributors	xi
Series Preface	xvii
Volume Preface	xix
PART 1: METHODS	1
Calculation of Bonding Properties <i>Gernot Frenking and Moritz von Hopffgarten</i>	3
Determining Transition States in Bioinorganic Reactions <i>Marcus Lundberg and Keiji Morokuma</i>	17
Quantum Mechanical/Molecular Mechanical (QM/MM) Methods and Applications in Bioinorganic Chemistry <i>Ulf Ryde</i>	33
Ab initio and Semiempirical Methods <i>Serge I. Gorelsky</i>	43
Spectroscopic Properties of Protein-Bound Cofactors: Calculation by Combined Quantum Mechanical/Molecular Mechanical (QM/MM) Approaches <i>Mahesh Sundararajan, Christoph Riplinger, Maylis Orio, Frank Wennmohs and Frank Neese</i>	55
Spectroscopic Properties Obtained from Time-Dependent Density Functional Theory (TD-DFT) <i>Jochen Autschbach</i>	71
Nuclear Magnetic Resonance (NMR) Parameters of Transition Metal Complexes: Methods and Applications <i>Martin Kaupp and Michael Bühl</i>	91
Calculation of Reduction Potential and pK_a <i>Jan H. Jensen and Hui Li</i>	109
Quantum-Chemistry-Centered Normal Coordinate Analysis (QCC-NCA): Application of NCA for the Simulation of the Vibrational Spectra of Large Molecules <i>Nicolai Lehnert</i>	123
Molecular Mechanics in Bioinorganic Chemistry <i>Robert J. Deeth</i>	141
Multiconfigurational Quantum Mechanics (QM) for Heavy Element Compounds <i>Björn O. Roos</i>	147
Approximate Density Functionals: Which Should I Choose? <i>Dmitrij Rappoport, Nathan R. M. Crawford, Filipp Furche and Kieron Burke</i>	159

Spin Contamination in Inorganic Chemistry Calculations	173
<i>Jason L. Sonnenberg, H. Bernhard Schlegel and Hrant P. Hratchian</i>	
Gaussian Basis Sets for Quantum Mechanical (QM) Calculations	187
<i>Kirk A. Peterson</i>	
PART 2: CASE STUDIES – BIOINORGANIC	201
Modeling Metalloenzymes with Density Functional and Mixed Quantum Mechanical/Molecular Mechanical (QM/MM) Calculations: Progress and Challenges	203
<i>Richard A. Friesner</i>	
Broken Symmetry States of Iron–Sulfur Clusters	213
<i>Louis Noodleman and David A. Case</i>	
Water Oxidation by the Manganese Cluster in Photosynthesis	229
<i>Per E. M. Siegbahn</i>	
Nature of the Catecholate–Fe(III) Bond: High Affinity Binding and Substrate Activation in Bioinorganic Chemistry	241
<i>Edward I. Solomon, Monita Y. M. Pau and Rosalie K. Hocking</i>	
Computational Studies: B₁₂ Cofactors and Their Interaction with Enzyme Active Sites	255
<i>Thomas C. Brunold</i>	
Reaction Coordinate of Pyranopterin Molybdenum Enzymes	277
<i>Martin L. Kirk, Sushilla Knottenbelt and Abebe Habtegabre</i>	
Electronic Structure Calculations: Dinitrogen Reduction in Nitrogenase and Synthetic Model Systems	287
<i>Felix Tuczek</i>	
Hydrogenases: Theoretical Investigations Towards Bioinspired H₂ Production and Activation	309
<i>Maurizio Bruschi, Giuseppe Zampella, Claudio Greco, Luca Bertini, Piercarlo Fantucci and Luca De Gioia</i>	
Computational Studies: Cisplatin	327
<i>Yogita Mantri and Mu-Hyun Baik</i>	
Computational Methods: Modeling of Reactivity in Zn-Containing Enzymes	343
<i>Jon I. Mujika, Adrian J. Mulholland and Jeremy N. Harvey</i>	
Combined Density Functional Theory (DFT) and Electrostatics Study of the Proton Pumping Mechanism in Cytochrome <i>c</i> Oxidase	353
<i>Jason Quenneville, Dragan M. Popović and Alexei A. Stuchebrukhov</i>	
Computational Studies: Proton/Water Coupling to Metals in Biological Reaction Mechanisms	363
<i>Y. Bu and R. I. Cukier</i>	
Computational Studies: Chemical Evolution of Metal Sites	373
<i>Kasper P. Jensen</i>	
PART 3: CASE STUDIES – INORGANIC	387
Electronic Structure Calculations: Transition Metal–NO Complexes	389
<i>Abhik Ghosh, Jeanet Conradie and Kathrin H. Hopmann</i>	
Structural Origins of Noninnocent Coordination Chemistry	411
<i>Robert K. Szilagy</i>	

Electronic Structure of Metal–Metal Bonds	425
<i>John E. McGrady</i>	
Computational Methods: Transition Metal Clusters	433
<i>Régis Gautier, Jean-François Halet and Jean-Yves Saillard</i>	
Computational Methods: Heteropolyoxoanions	453
<i>Josep M. Poblet and Xavier López</i>	
Electronic Structure Calculations: Metal Carbonyls	467
<i>Chantal Daniel</i>	
Potential Energy Surfaces for Metal-Assisted Chemical Reactions	489
<i>Tiziana Marino, Maria del Carmen Michelini, Nino Russo, Emilia Sicilia and Marirosa Toscano</i>	
Computational Methods: Lanthanides and Actinides	503
<i>M. Dolg and X. Cao</i>	
Spin-Orbit Coupling: Effects in Heavy Element Chemistry	517
<i>Nikolas Kaltsoyannis</i>	
Noble Gas Compounds: Reliable Computational Methods	527
<i>David A. Dixon</i>	
Computational Studies: Boranes	539
<i>Oottikkal Shameema and Eluvathingal D. Jemmis</i>	
Multiple Aromaticity, Multiple Antiaromaticity, and Conflicting Aromaticity in Inorganic Systems	551
<i>Dmitry Yu. Zubarev and Alexander I. Boldyrev</i>	
Theoretical Aspects of Main Group Multiple Bonded Systems	563
<i>Ioan Silaghi-Dumitrescu, Petronela Petrar, Gabriela Nemeş and R. Bruce King</i>	
Index	577
