Preface	xxvii
Acknowledgements	xxxii
1 Introduction	1
1.1 Applications and services of satellite networks	1
1.1.1 Roles of satellite networks	2
1.1.2 Network software and hardware	4
1.1.3 Satellite network interfaces	4
1.1.4 Network services	5
1.1.5 Applications	5
1.2 ITU-R definitions of satellite services	5
1.2.1 Fixed satellite service (FSS)	5
1.2.2 Mobile satellite service (MSS)	6
1.2.3 Broadcasting satellite service (BSS)	6
1.2.4 Other satellite services	6
1.3 ITU-T definitions of network services	6
1.3.1 Interactive services	6
1.3.2 Distribution services	7
1.4 Internet services and applications	8
1.4.1 World wide web (WWW)	8
1.4.2 File transfer protocol (FTP)	9
1.4.3 Telnet	9
1.4.4 Electronic mail (email)	9
1.4.5 Multicast and content distribution	10
1.4.6 Voice over internet protocol (VoIP)	10
1.4.7 Domain name system (DNS)	10
1.5 Circuit-switching network	11
1.5.1 Connection set up	12
1.5.2 Signalling	12

1.5.3	Transmission multiplexing hierarchy based on FDM	13
1.5.4	Transmission multiplexing hierarchy based on TDM	13
1.5.5	Space switching and time switching	15
1.5.6	Coding gain of forward error correction (FEC)	16
1.6	Packet-switching networks	16
1.6.1	Connection-oriented approach	17
1.6.2	Connectionless approach	18
1.6.3	Relationship between circuit switching and packet switching	19
1.6.4	Impacts of packet on network designs	20
1.6.5	Packet header and payload	20
1.6.6	Complexity and heterogeneous networks	20
1.6.7	Performance of packet transmissions	21
1.6.8	Impact of bit level errors on packet level	21
1.7	OSI/ISO reference model	22
1.7.1	Protocol terminology	22
1.7.2	Layering principle	22
1.7.3	Functions of the seven layers	23
1.7.4	Fading of the OSI/ISO reference model	24
1.8	The ATM protocol reference model	24
1.8.1	Narrowband ISDN (N-ISDN)	24
1.8.2	Broadband ISDN (B-ISDN)	24
1.8.3	ATM technology	25
1.8.4	The reference model	25
1.8.5	Problems: lack of available services and applications	26
1.9	Internet protocols reference model	26
1.9.1	Network layer: IP protocol	27
1.9.2	Network technologies	27
1.9.3	Transport layer: TCP and UDP	27
1.9.4	Application layer	27
1.9.5	Problems: no QoS and no control on resources	27
1.10	Satellite network	28
1.10.1	Access network	28
1.10.2	Transit network	28
1.10.3	Broadcast network	28
1.10.4	Space segment	28
1.10.5	Ground segment	30
1.10.6	Satellite orbits	30
1.10.7	Satellite transmission frequency bands	31
1.11	Characteristics of satellite networks	32
1.11.1	Propagation delay	33
1.11.2	Propagation loss and power limited	33
1.11.3	Orbit space and bandwidth limited for coverage	34
1.11.4	Operational complexity for LEO	34
1.12	Channel capacity of digital transmissions	34
1.12.1	The Nyquist formula for noiseless channels	34
1.12.2	The Shannon theorem for noise channels	34
1.12.3	Channel capacity boundary	35
1.12.4	The Shannon power limit (-1.6 dB)	36
1.12.5	Shannon bandwidth efficiency for large E_b/N_0	36

1.13	Internetworking with terrestrial networks	37
1.13.1	Repeaters at the physical layer	37
1.13.2	Bridges at link layer	37
1.13.3	Switches at the physical, link and network layers	37
1.13.4	Routers for interconnecting heterogeneous networks	38
1.13.5	Protocol translation, stacking and tunnelling	38
1.13.6	Quality of service (QoS)	39
1.13.7	End-user QoS class and requirements	39
1.13.8	Network performance	40
1.13.9	QoS and NP for satellite networking	40
1.14	Digital video broadcasting (DVB)	42
1.14.1	The DVB standards	42
1.14.2	DVB-S satellite delivery	43
1.14.3	MPEG-2 baseband processing	44
1.14.4	Transport stream (TS)	44
1.14.5	Service objectives	45
1.14.6	Satellite channel adaptation	45
1.14.7	DVB return channel over satellite (DVB-RCS)	46
1.14.8	TCP/IP over DVB	47
1.15	Historical development of computer and data networks	47
1.15.1	The dawn of the computer and data communications age	47
1.15.2	Development of local area networks (LANs)	47
1.15.3	Development of WANs and ISO/OSI	48
1.15.4	The birth of the Internet	48
1.15.5	Integration of telephony and data networks	48
1.15.6	Development of broadband integrated networks	48
1.15.7	The killer application WWW and Internet evolutions	49
1.16	Historical development of satellite communications	49
1.16.1	Start of satellite and space eras	49
1.16.2	Early satellite communications: TV and telephony	49
1.16.3	Development of satellite digital transmission	50
1.16.4	Development of direct-to-home (DTH) broadcast	50
1.16.5	Development of satellite maritime communications	50
1.16.6	Satellite communications in regions and countries	50
1.16.7	Satellite broadband networks and mobile networks	50
1.16.8	Internet over satellite networks	50
1.17	Convergence of network technologies and protocols	51
1.17.1	Convergence of services and applications in user terminals	51
1.17.2	Convergence of network technologies	52
1.17.3	Convergence of network protocols	52
1.17.4	Satellite network evolution	53
	Further reading	53
	Exercises	53
2	Satellite Orbits and Networking Concepts	55
2.1	Laws of physics	56
2.1.1	Kepler's three laws	56
2.1.2	Newton's three laws of motion and the universal law of gravity	56
2.1.3	Kepler's first law: satellite orbits	57
2.1.4	Kepler's second law: area swept by a satellite vector	59

2.1.5 Kepler's third law: orbit period	60
2.1.6 Satellite velocity	60
2.2 Satellite orbit parameters	61
2.2.1 Semi-major axis (a)	61
2.2.2 Eccentricity (e)	61
2.2.3 Inclination of orbit (i)	62
2.2.4 Right ascension of the node (Ω) and argument of perigee (ω)	63
2.3 Useful orbits	63
2.3.1 Geosynchronous earth orbits	63
2.3.2 Geostationary earth orbits (GEOs)	64
2.3.3 High elliptical orbits (HEOs)	64
2.3.4 Notations of low earth orbit (LEO) satellite constellations	65
2.3.5 Orbital perturbations	66
2.3.6 Satellite altitude and coverage	66
2.3.7 Antenna gain and beam-width angle	67
2.3.8 Coverage calculations	67
2.3.9 Distance and propagation delay from earth station to satellite	68
2.4 Satellite link characteristics and modulations for transmissions	69
2.4.1 Satellite link characteristics	71
2.4.2 Modulation techniques	71
2.4.3 Phase shift keying (PSK) schemes for satellite transmissions	72
2.4.4 Binary phase shift keying (BPSK)	73
2.4.5 Quadrature PSK (QPSK)	73
2.4.6 Gaussian-filtered minimum shift keying (GMSK)	74
2.4.7 Bit error rate (BER): the quality parameter of modulation schemes	75
2.4.8 Satellite networking in the physical layer	75
2.5 Forward error correction (FEC)	77
2.5.1 Linear block codes	78
2.5.2 Cyclic codes	78
2.5.3 Trellis coding and convolutional codes	79
2.5.4 Concatenated codes	79
2.5.5 Turbo codes	80
2.5.6 Performance of FEC	81
2.6 Multiple access techniques	81
2.6.1 Frequency division multiple access (FDMA)	83
2.6.2 Time division multiple access (TDMA)	83
2.6.3 Code division multiple access (CDMA)	84
2.6.4 Comparison of FDMA, TDMA and CDMA	84
2.7 Bandwidth allocation	84
2.7.1 Fixed assignment access	85
2.7.2 Demand assignment	85
2.7.3 Random access	86
2.8 Satellite networking issues	86
2.8.1 Single hop satellite connections	86
2.8.2 Multi-hop satellite connections	86
2.8.3 Inter-satellite links (ISL)	88
2.8.4 Handovers	89
2.8.5 Satellite intra-beam and inter-beam handovers	90
2.8.6 Earth fixed coverage vs. satellite fixed coverage	91
2.8.7 Routing within constellation of satellites network	92

2.8.8 Internetworking	92
2.8.9 Satellite availability and diversity	93
Further reading	94
Exercises	94
3 ATM and Internet Protocols	97
3.1 ATM protocol and fundamental concepts	97
3.1.1 Packetisation delay	99
3.1.2 Queuing delay	99
3.1.3 Compromise solution between North America and Europe	100
3.2 ATM layer	101
3.2.1 The GFC field	101
3.2.2 The VPI and VCI fields	101
3.2.3 The CLP field	103
3.2.4 The PT field	104
3.2.5 The HEC field	104
3.3 ATM adaptation layer (AAL)	104
3.3.1 AAL1 for class A	105
3.3.2 AAL2 for class B	107
3.3.3 AAL3/4 for classes C and D	107
3.3.4 AAL5 for Internet protocol	107
3.4 The physical layer	109
3.4.1 The physical medium (PM) sublayers	109
3.4.2 The transmission convergence (TC) sublayer	109
3.4.3 ATM cell transmissions	110
3.4.4 Target solution for ATM transmission	110
3.4.5 ATM over synchronous digital hierarchy (SDH)	110
3.4.6 ATM over DS1	112
3.4.7 ATM over E1	113
3.5 ATM interfaces and ATM networking	113
3.5.1 User-network access	113
3.5.2 Network node interconnections	114
3.5.3 ATM DXI	115
3.5.4 B-ICI	116
3.5.5 Permanent virtual connections vs. switched virtual connections	116
3.5.6 ATM signalling	117
3.5.7 ATM addressing	117
3.5.8 Address registration	118
3.6 Network traffic, QoS and performance issues	119
3.6.1 Traffic descriptors	120
3.6.2 Quality of service (QoS) parameters	120
3.6.3 Performance issues	120
3.7 Network resource management	121
3.7.1 Connection admission control (CAC)	122
3.7.2 UPC and NPC	122
3.7.3 Priority control and congestion control	122
3.7.4 Traffic shaping	123
3.7.5 Generic cell rate algorithm (GCRA)	123
3.7.6 Leaky bucket algorithm (LBA)	123
3.7.7 Virtual scheduling algorithm (VSA)	126

3.8	Internet protocols	127
3.8.1	Internet networking basics	127
3.8.2	Protocol hierarchies	128
3.8.3	Connectionless network layer	128
3.8.4	The IP packet format	128
3.8.5	IP address	130
3.8.6	Mapping between Internet and physical network addresses	131
3.8.7	ARP and RARP	132
3.8.8	Internet routing protocols	132
3.8.9	The interior gateway routing protocol (IGRP)	132
3.8.10	The exterior gateway routing protocol (EGRP)	133
3.9	Transport layer protocols: TCP and UDP	133
3.9.1	Transmission control protocol (TCP)	133
3.9.2	The TCP segment header format	134
3.9.3	Connection set up and data transmission	135
3.9.4	Congestion and flow control	136
3.9.5	User datagram protocol (UDP)	137
3.10	IP and ATM internetworking	138
3.10.1	LAN emulation (LANE)	139
3.10.2	LANE components	140
3.10.3	LANE entity communications	140
3.10.4	Classical IP over ATM	141
3.10.5	Packet encapsulation	141
3.10.6	IP and ATM address resolution	142
	Further reading	143
	Exercises	144
4	Satellite Internetworking with Terrestrial Networks	145
4.1	Networking concepts	145
4.2	Networking terminology	147
4.2.1	Private network	147
4.2.2	Public network	147
4.2.3	Quality aspects of telephony services	148
4.2.4	IP based network	148
4.3	Network elements and connections	149
4.3.1	Network terminals	149
4.3.2	Network nodes	150
4.3.3	Network connections	150
4.3.4	End-to-end connections	151
4.3.5	Reference configurations	151
4.4	Network traffic and signalling	152
4.4.1	User traffic and network services	152
4.4.2	Signalling systems and signalling traffic	154
4.4.3	In-band signalling	154
4.4.4	Out-of-band signalling	155
4.4.5	Associated and disassociated channel signalling	156
4.4.6	ITU-T signalling system No. 7 (ITU-T SS7)	156
4.4.7	Network management	158
4.4.8	Network operation systems and mediation functions	158

4.5	Access and transit transmission networks	160
4.5.1	Analogue telephony networks	160
4.5.2	Telephony network traffic engineering concept	161
4.5.3	Access to satellite networks in the frequency domain	162
4.5.4	On-board circuit switching	162
4.6	Digital telephony networks	163
4.6.1	Digital multiplexing hierarchy	163
4.6.2	Satellite digital transmission and on-board switching	164
4.6.3	Plesiochronous digital hierarchy (PDH)	165
4.6.4	Limitations of the PDH	165
4.7	Synchronous digital hierarchy (SDH)	166
4.7.1	Development of SDH	167
4.7.2	The SDH standards	167
4.7.3	Mapping from PDH to SDH	168
4.7.4	The benefits of SDH	169
4.7.5	Synchronous operation	169
4.7.6	Synchronous optical network (SONET)	171
4.7.7	SDH over satellite – the Intelsat scenarios	171
4.8	Integrated services digital networks (ISDN)	173
4.8.1	Basic rate interface (BRI)	173
4.8.2	Primary rate interface (PRI)	174
4.8.3	ISDN physical layer (layer 1)	175
4.8.4	ISDN link layer (layer 2)	176
4.8.5	ISDN network layer (layer 3)	176
4.9	ISDN over satellite	177
4.9.1	ITU-T ISDN hypothetical reference connection (IRX)	177
4.9.2	ITU-R hypothetical reference digital path (HRDP) for satellite	178
4.9.3	Performance objectives	179
4.9.4	Satellite network to ISDN interconnection scenarios	179
4.9.5	Routing plan	180
4.10	Interworking with heterogeneous networks	183
4.10.1	Services	184
4.10.2	Addressing	184
4.10.3	Routing	184
4.10.4	Evolution	185
	Further reading	185
	Exercises	186
5	ATM over Satellite Networks	187
5.1	Background	187
5.1.1	Networking issues	188
5.1.2	Satellite services in the B-ISDN networking environment	188
5.2	Design issues of satellite ATM systems	190
5.2.1	Propagation delay	190
5.2.2	Attenuation and constraints	191
5.3	The GEO satellite ATM networking architecture	192
5.3.1	The ground segment	192
5.3.2	The space segment	193
5.3.3	Satellite bandwidth resource management	194
5.3.4	Connection admission control (CAC)	195

5.3.5 Network policing functions	195
5.3.6 Reactive congestion control	196
5.4 Advanced satellite ATM networks	196
5.4.1 Radio access layer	197
5.4.2 On-board processing (OBP) characteristics	197
5.4.3 The ATM on-board switch	198
5.4.4 Multibeam satellites	199
5.4.5 LEO/MEO satellite constellations	201
5.4.6 Inter-satellite links (ISL)	201
5.4.7 Mobile ATM	202
5.4.8 Use of higher frequency spectrum	202
5.5 ATM performance	203
5.5.1 Layered model of performance for B-ISDN	203
5.5.2 ATM performance parameters	203
5.5.3 Impact of satellite burst errors on the ATM layer	205
5.5.4 Impact of burst errors on AAL protocols	207
5.5.5 Error control mechanisms	208
5.5.6 Enhancement techniques for satellite ATM networks	209
5.6 Evolution of ATM satellite systems	210
Further reading	212
Exercises	212
6 Internet Protocol (IP) over Satellite Networks	213
6.1 Different viewpoints of satellite networking	213
6.1.1 Protocol-centric viewpoint of satellite IP network	214
6.1.2 Satellite-centric viewpoint of global networks and the Internet	215
6.1.3 Network-centric viewpoint of satellite networks	216
6.2 IP packet encapsulation	217
6.2.1 Basic concepts	217
6.2.2 High-level data link control (HDLC) protocol	217
6.2.3 Point-to-point protocol (PPP)	218
6.2.4 Media access control	219
6.2.5 IP over satellite	219
6.3 Satellite IP networking	219
6.3.1 Routing on board satellites	221
6.3.2 IP mobility in satellite networks	221
6.3.3 Address resolution	223
6.4 IP multicast over satellite	223
6.4.1 IP multicast	223
6.4.2 IP multicast addressing	225
6.4.3 Multicast group management	225
6.4.4 IP multicast routing	225
6.4.5 IP multicast scope	227
6.4.6 IGMP behaviour in satellite environments	227
6.4.7 Multicast routing protocols in a satellite environment	228
6.4.8 Reliable multicast protocols over satellites	230
6.5 Basic network security mechanisms	231
6.5.1 Security approaches	231
6.5.2 Single-direction hashing functions	231
6.5.3 Symmetrical codes (with secret keys)	232
6.5.4 Asymmetrical codes (with public/private keys)	232

6.6	Satellite networking security	234
6.6.1	IP security (IPsec)	234
6.6.2	Satellite VPN	235
6.6.3	IP multicast security	235
6.7	DVB over satellite	236
6.7.1	MPEG-2 source coding and multiplexing DVB-S streams	237
6.7.2	DVB over satellite (DVB-S)	238
6.7.3	DVB security	239
6.7.4	Conditional access in DVB-S	240
6.7.5	DVB-RCS interactive service and IP over DVB	241
6.7.6	DVB-RCS security	242
6.7.7	DVB security and IP multicast security	243
6.8	Internet quality of service (IP QoS)	243
6.8.1	Layered model of performance for IP service	244
6.8.2	IP packet transfer performance parameters	245
6.8.3	IP network performance objectives for QoS classes	246
6.8.4	Guidance on IP QoS class usage	247
6.9	Integrated services (Intserv) architectures for QoS	247
6.9.1	Integrated services architecture (ISA) principles	248
6.9.2	The resource reservation protocol (RSVP)	249
6.9.3	Intserv service classes	251
6.10	Differentiated services (Diffserv) for QoS	251
6.10.1	DSA principles	252
6.10.2	Traffic classification	253
6.10.3	Traffic conditioning	254
6.10.4	Diffserv per hop behaviour (PHB)	254
6.10.5	Supporting Intserv across the satellite network Diffserv domain	256
	Further reading	258
	Exercises	258
7	Impact of Satellite Networks on Transport Layer Protocols	261
7.1	Introduction	262
7.1.1	Application characteristics	262
7.1.2	Client and server host parameters	263
7.1.3	Satellite network configurations	263
7.1.4	TCP and satellite channel characteristics	264
7.1.5	TCP flow control, congestion control and error recovery	265
7.2	TCP performance analysis	266
7.2.1	First TCP segment transmission	267
7.2.2	TCP transmission in the slow-start stage	267
7.2.3	TCP transmission in congestion avoidance stage	268
7.3	Slow-start enhancement for satellite networks	269
7.3.1	TCP for transactions	270
7.3.2	Slow start and delayed acknowledgement (ACK)	270
7.3.3	Larger initial window	271
7.3.4	Terminating slow start	271
7.4	Loss recovery enhancement	272
7.4.1	Fast retransmission and fast recovery	272
7.4.2	Selective acknowledgement (SACK)	273
7.4.3	SACK based enhancement mechanisms	273

7.4.4 ACK congestion control	274
7.4.5 ACK filtering	274
7.4.6 Explicit congestion notification	275
7.4.7 Detecting corruption loss	276
7.4.8 Congestion avoidance enhancement	276
7.5 Enhancements for satellite networks using interruptive mechanisms	277
7.5.1 TCP spoofing	278
7.5.2 Cascading TCP or split TCP	278
7.5.3 The perfect TCP solution for satellite networking	279
7.6 Impacts on applications	279
7.6.1 Bulk transfer protocols	279
7.6.2 Semi-interactive protocols	280
7.6.3 Interactive protocols	280
7.6.4 Distributed methods for providing Internet services and applications	281
7.6.5 Web caching in satellite networks	282
7.7 Real-time transport protocol (RTP)	283
7.7.1 Basics of RTP	283
7.7.2 RTP control protocol (RTCP)	285
7.7.3 Sender report (SR) packets	286
7.7.4 Receiver report (RR) packets	288
7.7.5 Source description (SDES) RTCP packet	288
7.7.6 SAP and SIP protocols for session initiations	288
7.7.7 Session directory service (SDS)	290
7.8 Voice over IP	291
7.8.1 Gateway decomposition	291
7.8.2 Protocols	291
7.8.3 Gatekeepers	291
7.8.4 Multimedia conferencing (MMC)	291
7.8.5 Conference control	292
Further reading	292
Exercises	293
8 Next Generation Internet (NGI) over Satellite	295
8.1 Introduction	296
8.2 New services and applications	296
8.2.1 Internet integrated services	296
8.2.2 Elastic and inelastic traffic	297
8.2.3 QoS provision and network performance	298
8.3 Traffic modelling and characterisation	298
8.3.1 Traffic modelling techniques	299
8.3.2 Scope of traffic modelling	299
8.3.3 Statistical methods for traffic modelling	300
8.3.4 Renewal traffic models	300
8.3.5 Markov models	300
8.3.6 Fluid traffic models	301
8.3.7 Auto-regressive and moving average traffic models	301
8.3.8 Self-similar traffic models	302
8.4 The nature of internet traffic	302
8.4.1 The world wide web (WWW)	302
8.4.2 Pareto distribution model for self-similar traffic	304

8.4.3 Fractional Brownian motion (FBM) process	304
8.4.4 Consideration of user behaviour in traffic modelling	305
8.4.5 Voice traffic modelling	306
8.4.6 On-off model for voice traffic	308
8.4.7 Video traffic modelling	309
8.4.8 Multi-layer modelling for internet WWW traffic	311
8.5 Traffic engineering	312
8.5.1 Traffic engineering principles	312
8.5.2 Internet traffic engineering	314
8.6 Multi-protocol label switching (MPLS)	316
8.6.1 MPLS forwarding paradigm	316
8.6.2 MPLS basic operation	318
8.6.3 MPLS and Diffserv interworking	321
8.6.4 MPLS and ATM interworking	322
8.6.5 MPLS with traffic engineering (MPLS-TE)	323
8.7 Internet protocol version 6 (IPv6)	324
8.7.1 Basics of internet protocol version 6 (IPv6)	324
8.7.2 IPv6 addressing	326
8.7.3 IPv6 networks over satellites	329
8.7.4 IPv6 transitions	329
8.7.5 IPv6 tunnelling through satellite networks	330
8.7.6 The 6to4 translation via satellite networks	330
8.7.7 Issues with 6to4	332
8.7.8 Future development of satellite networking	332
Further reading	334
Exercises	335
Index	337
