Chapter 1 **Introduction 1**

M. E. El-Hawary, Dalhousie University

- 1.1. Fuzzy Sets 1
- 1.2. Fuzzy Systems, Complexity, and Ambiguity 2
- 1.3. Fuzziness and Probability 3
- 1.4. When Is a Fuzzy Formulation Appropriate? 5
- 1.5. Applications of Fuzzy Systems 6
- 1.6. Beyond Fuzzy Systems: Soft Computing and Computational Intelligence 6
- 1.7. Fuzzy Theory in Electric Power Systems 7
- 1.8. Some Areas of Fuzzy Applications in Power Systems 9
 - 1.8.1. Expansion Planning 9
 - 1.8.2. Long- and Midterm Scheduling 10
 - 1.8.3. Dynamic Security Assessment 10
 - 1.8.4. Load Forecasting 10

1.8.5. Fuzzy Logic Controllers	11
1.8.6. Diagnosis	11
1.9. Outline of the Book	11
References	14

Chapter 2 **Fuzzy Systems: An Engineering Point of View** 15
M. E. El-Hawary, Dalhousie University

2.1. Chapter Overview	15
2.2. Fuzzy Sets and Membership	16
2.2.1. Membership Functions	16
2.2.2. Representations of Membership Functions	19
2.2.3. α -Cuts	19
2.2.4. Resolution Principle	20
2.2.5. Convexity	21
2.2.6. Fuzzy Numbers	21
2.2.7. Cardinality	22
2.3. Set-Theoretic and Algebraic Operations for Fuzzy Sets	23
2.3.1. Intersection	23
2.3.2. Union	23
2.3.3. Complement	25
2.3.4. Equality	25
2.3.5. Subset	26
2.3.6. Algebraic Operations on Fuzzy Sets	27
Algebraic Sum of Two Fuzzy Sets (probabilistic sum)	27
Algebraic Product of Two Fuzzy Sets	27
Bounded Sum of Two Fuzzy Sets	27
Bounded Difference of Two Fuzzy Sets	27
2.3.7. Fuzzy Power Set	27
Cartesian Product of Two Fuzzy Sets	27
The m th Power of a Fuzzy Set	28
2.4. Aggregation	28
2.4.1. t -Norms	28
2.4.2. t -Conorms (or s -Norms)	29
2.4.3. Parametric Families of t -Norms and Conorms	30
2.4.4. Hamacher's Family of Aggregation Operators	31
Hamacher Intersection	31
Hamacher Union	31
2.4.5. Yager's Family of Aggregation Operators	31
Yager Intersection	32
Yager Union	32
2.4.6. Dubois and Prade's Family of Aggregation Operators	32
Dubois and Prade Intersection	32
Dubois and Prade Union	32
2.4.7. Schweizer and Sklar Family of Aggregation Operators	33
2.4.8. Dombi Family of Aggregation Operators	33
2.4.9. Frank Family of Aggregation Operators	33
2.4.10. Averaging Operators	34
2.4.11. "Fuzzy And" and "Fuzzy Or" Operators	34

2.4.12. “Compensatory And” Operator	35
2.4.13. Guidelines for Choosing Appropriate Aggregation Operators	36
2.5. Extension Principle and Its Applications	37
2.5.1. Fuzzy Numbers	38
Positive (Negative) Fuzzy Numbers	38
Increasing (Decreasing) Two-Argument Operations	38
2.5.2. Algebraic Operations for Fuzzy Numbers	38
Properties of Extended Addition	39
Properties of the Extended Product	39
Extended Subtraction	39
Extended Division	40
2.5.3. LR Representation of Fuzzy Sets	40
Shape (Reference) Functions	40
2.5.4. LR -Type Fuzzy Numbers	40
2.5.5. Extended Arithmetic Operations via LR -Type Numbers	41
Addition	41
Opposite of a Fuzzy Number	41
Subtraction of Fuzzy Numbers	41
Multiplication of Fuzzy Numbers	41
Inverse of a Fuzzy Number	42
Division of Fuzzy Numbers	43
Flat Fuzzy Numbers (LR -Type Fuzzy Intervals)	43
2.5.6. Interval Arithmetic	44
Addition and Subtraction	45
Opposite (Image) of A	45
Multiplication and Division	45
Inverse A^{-1}	45
Maximum and Minimum Operations	46
Generalizing Interval Arithmetic to Fuzzy Numbers	46
Min and Max	48
2.6. Fuzzy Relations	48
2.6.1. Basics of Fuzzy Relations	48
Binary (Fuzzy) Relation	49
2.6.2. Operations on Fuzzy Relations	50
Composition of Fuzzy Relations	51
Generalized Compositions	51
Relational Joint	52
2.6.3. Types of Binary Fuzzy Relations	52
Reflexive and Related Relations	52
Symmetric and Related Relations	52
Transitive Relations	53
Binary Crisp Equivalence Relations	53
Equivalence Class	54
Partition	54
Similarity Relations	54
Resemblance Relations	54
Fuzzy Partial Ordering	55
2.6.4. Fuzzy Relation Equations	56
Inverse Fuzzy Relation Equations	56
References	58

Chapter 3	<p>Fuzzy Information Approaches to Equipment Condition Monitoring and Diagnosis 59</p> <p><i>K. Tomsovic and B. Baer, Washington State University</i></p> <p>3.1. Introduction 59</p> <p>3.2. Expert Systems and Equipment Diagnostics 61</p> <p style="padding-left: 20px;">3.2.1. Representing Diagnostic Information 61</p> <p>3.3. The Fuzzy Information Approach 63</p> <p style="padding-left: 20px;">3.3.1. Fundamentals of Fuzzy Logic 63</p> <p style="padding-left: 20px;">3.3.2. Fundamentals of Fuzzy Measures 64</p> <p style="padding-left: 20px;">3.3.3. Bodies of Evidence and Information Measures 65</p> <p>3.4. An Extended Example 67</p> <p>3.5. A Proposed Implementation 73</p> <p style="padding-left: 20px;">3.5.1. Rule Structure and Assigning Values to Uncertainties 74</p> <p style="padding-left: 40px;">Establishing Membership Functions 74</p> <p style="padding-left: 40px;">Establishing Fuzzy Measures of Rule Importance 76</p> <p style="padding-left: 20px;">3.5.2. Computation and Propagation of Uncertainties 76</p> <p style="padding-left: 20px;">3.5.3. Considerations of Efficiency 79</p> <p>3.6. Evaluation, Learning, and Information Measures Performance 79</p> <p style="padding-left: 20px;">3.6.1. Performance Evaluation and Tuning 80</p> <p style="padding-left: 20px;">3.6.2. ANN Approaches 81</p> <p>3.7. Summary and Discussion 82</p> <p>Acknowledgments 82</p> <p>References 83</p>
Chapter 4	<p>Detection and Localization of Shorted Turns in the DC Field Winding of Turbine-Generator Rotors Using Novelty Detection and Fuzzified Neural Networks 85</p> <p><i>M. A. El-Sharkawi, R. J. Marks II, and R. J. Streifel, University of Washington</i></p> <p><i>I. Kerszenbaum, Southern California Edison Company</i></p> <p>4.1. Introduction 85</p> <p>4.2. Existing Methods of Detection 86</p> <p>4.3. Location of Shorted Windings in Standstill Rotors 88</p> <p>4.4. Results 91</p> <p>4.5. Detection of Shorted Turns in Operational Generators 94</p> <p>4.6. Hardware for Signature Measurement 95</p> <p>4.7. Detection of Shorted Windings 95</p> <p>4.8. Novelty Detection 95</p> <p>4.9. Computation of Detection Threshold 96</p> <p>4.10. Results 97</p> <p style="padding-left: 20px;">4.10.1. Brush Noise Characterization 98</p> <p style="padding-left: 20px;">4.10.2. Laboratory Tests 102</p> <p style="padding-left: 20px;">4.10.3. Field Tests 107</p> <p>4.11. Conclusion 109</p> <p>References 110</p>

Chapter 5 Fuzzy Logic Controller as a Power System Stabilizer 112*O. P. Malik, The University of Calgary**K. A. M. El-Metwally, Cairo University*

- 5.1. Introduction 112
- 5.2. FLC Structure 113
- 5.3. FLC Design 114
 - 5.3.1. Selection of Control Variables 114
 - 5.3.2. Membership Function Definition 115
 - 5.3.3. Rule Creation and Inference 116
 - 5.3.4. Fuzzy Inference 117
 - 5.3.5. Defuzzification Strategy 118
- 5.4. Fuzzy Rules 120
- 5.5. FLC Parameter Tuning 122
- 5.6. Automatic Rule Generation 123
 - 5.6.1. ARG Using Highest Match Method 123
 - 5.6.2. ARG Using Fuzzy Inference Engine Reverse Engineering 124
- 5.7. Fuzzy-Logic-Based Power System Stabilizer 127
 - 5.7.1. Single-Machine Power System Model 127
 - 5.7.2. Fuzzy Logic Power System Stabilizer 128
 - 5.7.3. FLPSS Rule Generation and Parameter Tuning 128
 - 5.7.4. Simulation Studies 129
 - CPSS Parameters Selection 129
 - Light-Load Test 130
 - Leading Power Factor Operation Test 130
 - Robustness 130
 - Stability Test 132
- 5.8. FLC Application to a Multimachine Power System 133
 - 5.8.1. Multimachine System Configuration 133
 - 5.8.2. Multimode Oscillations in the Multimachine System 134
 - 5.8.3. Only One PSS Installed 135
 - 5.8.4. Three PSSs Installed 137
 - 5.8.5. Three-Phase-to-Ground Fault Test 138
- 5.9. Implementation and Experimental Studies 139
 - 5.9.1. Hardware System Description 139
 - 5.9.2. Implementation of the FLC Using 8051 Assembly Language 139
 - Fuzzification Membership Function Realization 140
 - Rules and Inference 141
 - Defuzzification 141
 - Integrating FLC with Speed Deviation Measurement 142
 - 5.9.3. The Micromachine Physical Power System Model 142
 - 5.9.4. Experiments and Results 143
 - Voltage Reference Step Change 143
 - Input Torque Reference Step Change 143
 - Three-Phase-to-Ground Fault Test 145
 - Unsymmetrical Short Circuit Tests 145
- 5.10. Concluding Remarks 146
- References 146

Chapter 6	Fuzzy Logic Power System Stabilizer Using Polar Information 149 <i>T. Hiyama, Kumamoto University</i>
	<ul style="list-style-type: none"> 6.1. Introduction 149 6.2. Advanced Fuzzy Logic Power System Stabilizer Using Three-Dimensional Polar Information 150 <ul style="list-style-type: none"> 6.2.1. Configuration of FLPSS and AFLPSS 150 6.2.2. Fuzzy Logic Control Scheme Using Two-Dimensional Information 151 6.2.3. Advanced Fuzzy Logic Control Scheme 153 6.2.4. Signal Conditioning 157 6.3. Simulation Studies Using One-Machine Infinite-Bus System 157 <ul style="list-style-type: none"> 6.3.1. One-Machine Infinite-Bus System 157 6.3.2. Optimal Settings of Stabilizer Parameters 158 6.3.3. Stabilizer Performance 159 6.3.4. AFLPSS Using Power Signal 160 6.3.5. Experimental Evaluation on 5-kVA Laboratory System 161 6.4. Evaluation on Analog Network Simulator 166 <ul style="list-style-type: none"> 6.4.1. Analog Network Simulator 166 6.4.2. Study System 167 6.4.3. Parameter Tuning 168 6.4.4. Test Results 169 6.5. Actual Installation on Hydrunits 173 <ul style="list-style-type: none"> 6.5.1. Basic Configuration of Prototype 173 6.5.2. Site Tests 173 6.6. Conclusion 176 References 176
Chapter 7	Fuzzy Logic Switching of FACTS Devices 178 <i>T. Hiyama, Kumamoto University</i>
	<ul style="list-style-type: none"> 7.1. Introduction 178 7.2. Fuzzy Logic Switching Control Scheme 179 7.3. Evaluation of Control Scheme 181 7.4. Multimachine Study System 182 7.5. Simulation Studies 184 <ul style="list-style-type: none"> 7.5.1. Thyristor-Controlled Series Capacitor Modules 184 <ul style="list-style-type: none"> Optimal Setting of Adjustable Parameters 185 Coordination with Power System Stabilizer 186 Typical Simulation Results 186 7.5.2. Static Var Compensator 187 <ul style="list-style-type: none"> Optimal Setting of Adjustable Parameters 190 Typical Simulation Results 191 7.5.3. Thyristor-Controlled Braking Resistor 194 <ul style="list-style-type: none"> Coordination with SVC 195 Optimal Setting of Adjustable Parameters 196 Typical Simulation Results 196 7.6. Conclusions 201 References 201

- Chapter 8 **Effects of Uncertain Load on Power Network Modeling 203**
C. N. Lu and R. C. Leou, National Sun Yat-Sen University
- 8.1. Introduction 203
 - 8.2. Effects of Data Uncertainty on Power Network Modeling 205
 - 8.2.1. Measurement Uncertainty and Its Effect on Real-Time Network Modeling 205
 - 8.2.2. Effects of Uncertain Load on Off-line Network Modeling 206
 - 8.2.3. Uncertainties Involved in Distribution Network Modeling 207
 - 8.3. Modeling Uncertain Load in Network Analysis 207
 - 8.3.1. Probabilistic Approach 208
 - 8.3.2. Possibilistic Approach 209
 - 8.3.3. Modeling Distribution Feeder Loads 210
 - 8.4. Fuzzy Set Theory Application to External-Network Modeling 212
 - 8.4.1. Fuzzy LP-Based External-Network Modeling 212
 - 8.4.2. Fuzzy Linear Programming 214
 - 8.4.3. Test Results 216
 - 8.5. Concluding Remarks 219
 - References 220
- Chapter 9 **A Fuzzy Perspective of Power System Reliability 223**
V. Miranda, Instituto de Engenharia de Sistemas e Computadores
- 9.1. Introduction 223
 - 9.2. Type I Power System Fuzzy Reliability Models 225
 - 9.2.1. Introduction 225
 - 9.2.2. Hierarchical 1 Fuzzy LOLP Index 226
 - Definitions 226
 - A Numerical Example 226
 - 9.2.3. Hierarchical 2 Fuzzy Reliability Assessment 231
 - DC Fuzzy Power Flow 232
 - DC Fuzzy Optimal Power Flow 234
 - Contributions to Risk Analysis in Planning: Robustness, Exposure, and Hedging 236
 - Combining Fuzzy and Probabilistic Assessments in Quality-of-Supply Assessment 237
 - Exposure and Robustness as Reliability Indices 238
 - Fuzzy Monte Carlo Simulation 238
 - Example 243
 - 9.3. Type II Power System Fuzzy Reliability Models 247
 - 9.3.1. Basic Fuzzy Reliability Concepts 247
 - 9.3.2. A Fuzzy Exponential Distribution 249
 - 9.3.3. Series and Parallel Systems 251
 - 9.3.4. Fuzzy Markov Models 252
 - 9.3.5. Frequency and Duration Models 259
 - Parallel Systems 259
 - Serial Systems 260
 - Deconvolution Approach 261
 - 9.3.6. Conditional Probability: The Fuzzy Case 261
 - 9.3.7. Minimum Cut Set Method with Fuzzy Indices 262
 - An Example 263

- 9.4. Type III Power System Fuzzy Reliability Models 265
 - 9.4.1. Introduction 265
 - 9.4.2. Ranking Fuzzy Numbers 266
 - Removal, or TDC 267
 - Center of Mass G 267
 - 9.4.3. Ranking Decisions: The Regret Criterion 268
 - 9.4.4. Fuzzy Dominance 269
 - 9.4.5. Application of Type III Calculations: Switching Device Location 270
 - 9.4.6. Radial Networks 271
 - Contribution of a Single Branch 272
 - General Algorithm 274
 - 9.4.7. Location of the Open Point of an Interconnection 274
 - 9.4.8. Optimal Number of Devices in an Interconnection Line 276
- 9.5. Conclusions 277
- References 278

Chapter 10 **Operation Support Expert System for Startup Schedule Optimization in Fossil Power Plants 280**

H. Matsumoto, Hitachi Research Laboratories

- 10.1. Introduction 280
- 10.2. Expectations of Fuzzy Theory in Plant Startup 281
 - 10.2.1. Plant Startup Problem 281
 - 10.2.2. State of the Art 281
 - 10.2.3. The Expert Way of Thinking 282
 - 10.2.4. Expectations of Fuzzy Theory as a New Paradigm 283
- 10.3. Operation Support and Startup Schedule Optimization for Conventional Fossil Power Plants 284
 - 10.3.1. System Design Concept 284
 - Objectives 284
 - Location of Critical Stress 285
 - 10.3.2. Functional Structure of the System 285
 - Outline of the System 285
 - Startup Scheduling 286
 - Operation Support 286
 - Man–Machine Interface 287
 - 10.3.3. Algorithm of Startup Scheduling 287
 - Initial Scheduling 287
 - Schedule Optimization 288
 - Rescheduling 290
 - 10.3.4. Operation Support Algorithm 293
 - Stress Monitoring and Control 293
 - Schedule Modification 293
 - 10.3.5. Hardware System 294
 - 10.3.6. Simulation Study 295
 - Hardware System for Simulation 295
 - Schedule Optimization and Rescheduling 295
 - Schedule Modification 296

	Time Reduction for Startup	296
	Computation Time	300
10.3.7.	Conclusions	300
10.4.	Startup Schedule Optimization for Combined-Cycle Power Plant	300
10.4.1.	System Design Concept	300
	Operational Constraints	300
	Expertise in Plant Operation	302
	Strategies of Schedule Optimization	302
10.4.2.	Schedule Optimization Algorithm	303
	Functional Structure of the System	303
	Schedule Parameters	305
	Plant Dynamic Models	305
	Evaluation of Startup Dynamics	307
	Schedule Modification by Fuzzy Reasoning	309
10.4.3.	Simulation Study	314
	Values of Operational Constraints	314
	Tuning Coefficients	314
	Convergence Characteristics	314
	Computation Time	316
10.4.4.	Conclusions	317
10.5.	Discussion	317
10.5.1.	Flexibilities of the Expert System	317
10.5.2.	Potential Applications of the Optimization Algorithm	319
10.5.3.	Future Improvements	319
10.6.	Conclusions	319
	References	320

Chapter 11 **Fuzzy Systems Approach to Short-Term Power Purchases Considering Uncertain Prices 321**

S. M. Shahidehpour and R. W. Ferrero, Illinois Institute of Technology

11.1.	Introduction	321
11.2.	Description of the Problem	322
11.2.1.	Short-Term Power Purchases	322
11.2.2.	Triangular Fuzzy Numbers	324
11.2.3.	Fuzzy Variables in the Problem	325
11.3.	Mathematical Formulation	326
11.3.1.	Mathematical Formulation Using Fuzzy Numbers	326
11.3.2.	Fuzzy Comparison	327
	Definition	327
11.3.3.	Goal Satisfaction	327
11.3.4.	Minimum-Cost Scheduling Using Fuzzy Expressions	329
11.4.	Test Results	330
11.4.1.	System Characteristics	330
11.4.2.	Initial Solution, $\gamma = 1$	331
11.4.3.	Minimum-Cost Solution, Iterations with $\gamma > 1$	332
11.5.	Discussion	333
11.5.1.	Effect of Changing δ_1 in the Goal	333
11.5.2.	Effect of Network Constraints	334

11.6. Conclusions	335
Appendix 1: Notation	336
Appendix 2: Almost Positive Fuzzy Expressions	336
A2.1. Fuzzy Goal	336
A2.2. Fuzzy Inequalities	337
References	338
