Preface

S. Luryi, J. M. Xu, and A. Zaslavsky ix

1 THE FUTURE WITH SILICON

Microelectronics Technology: Challenges in the 21st Century

S. M. Sze 3

Trends in Microlithography

J. Benschop 17

Strategies at the End of CMOS Scaling

P. M. Solomon 28

Driving Technology to Re-Engineer Telecommunications

T. P. Smith III, H. A. Maudar, J. W. Liu, and S. J. Farrell 43

Rare Earth Metal Oxides as High- κ Gate Insulators for Future MOSFETs

H. Iwai, S. Ohmi, S. Akama, A. Kikuchi, I. Kashiwagi, C. Ooshima, J. Taguchi, H. Yamamoto, C. Kobayashi, K. Sato, M. Takeda, K. Oshima, and H. Ishiwara 55

Ultra-Thin Single- and Double-Gate MOSFETs for Future ULSI Applications: Measurements, Simulations, and Open Issues

D. Esseni, C. Fiegna, and M. Mastrapasqua 63

Future Silicon-on-Insulator MOSFETs: Chopped or Genetically Modified?

F. Allibert, J. Pretet, A. Zaslavsky, and S. Cristoloveanu 79

Current Transport Models for Engineering Applications

T. Grasser and S. Selberherr 87

Advanced Physically Based Device Modeling for Gate Current and Hot-Carrier Phenomena in Scaled MOSFETs

P. Palestri, L. Selmi, A. Dalla Serra, A. Abramo, E. Sangiorgi, M. Pavesi, P. Rigolli, and F. Widdershoven 99

2 THE FUTURE BEYOND SILICON: SEMICONDUCTORS, SUPERCONDUCTORS, PHASE TRANSITIONS, DNA

FLUX-1: Designing the First Generation of 20-GHz Superconductor RSFQ Microprocessors in 1.75-μm Technology <i>M. Dorojevets</i>	115
Silicon ... Beyond Silicon: Beginning of the End or End of the Beginning? <i>I. Lagnado and P. R. de la Houssaye</i>	128
Taming Tunneling <i>M. J. Kelly</i>	141
Switching Device Based on a First-Order Metal-Insulator Transition Induced by an External Electric Field <i>F. Chudnovskiy and S. Luryi</i>	148
DNA Conduction Mechanisms and Engineering <i>R. Zia, A. Rakitin, and J. M. Xu</i>	156
New Cold Cathode Paradigms for Vacuum Microelectronics Applications <i>M. Cahay, Y. Modukuru, J. Thachery, A. Malhotra, H. Tang, and P. Boolchand</i>	167
3 THE FUTURE ALONGSIDE SILICON: OPTICAL	
The Evolution of Optical Data Storage <i>H. van Houten</i>	177
Long Wavelength Quantum Dot Lasers: From Promising to Unbeatable <i>N. N. Ledentsov</i>	195
Temperature-Insensitive Semiconductor Lasers <i>L. V. Asryan and S. Luryi</i>	219
Trends in Semiconductor Laser Design: Balance Between Leakage, Gain and Loss in InGaAsP/InP Multiquantum Well Structures <i>G. Belenky, L. Shterengas, C. W. Trussell, C. L. Reynolds, Jr., M. S. Hybertsen, and R. Menna</i>	231

Contents	vii
Terahertz Emitters Based on Intersubband Transitions <i>Q. Hu, B. S. Williams, M. R. Melloch, and J. L. Reno</i>	242
The Future of Photovoltaics <i>M. A. Green</i>	253
Infrared Detectors Based on InAs/GaSb Superlattices <i>M. Razeghi, Y. Wei, and G. Brown</i>	263
Solid State Lighting <i>A. Zukauskas, M. S. Shur, and R. Gaska</i>	273
Reduction of Reflection Losses in Nonlinear Optical Crystals by Motheye Patterning <i>A. Zaslavsky, C. Aydin, G. J. Sonek, and J. Goldstein</i>	285
Growth of III-Nitrides on Si(111) and GaN Templates: Challenges and Prospects <i>M. A. Sánchez-García, E. Calleja, E. Muñoz, F. Calle, F. B. Naranjo, J. L. Pau, A. Jiménez, S. Fernández, and J. Ristic</i>	293
4 THE FUTURE WAY BEYOND SILICON: OTHER PARADIGMS	
Quantum Computing: A View from the Enemy Camp <i>M. I. Dyakonov</i>	307
Entanglement and Quantum Gate Operations with Spin-Qubits in Quantum Dots <i>J. Schliemann and D. Loss</i>	319
Quantum Computation with Quasiparticles of the Fractional Quantum Hall Effect <i>D. V. Averin and V. J. Goldman</i>	334
Photonics with Chips <i>A. V. Nurmikko</i>	340
Metacrystals: Three Dimensional Systems of Interacting Quantum Dots <i>D. Johnstone</i>	356
InGaAs/GaAs Quantum Well Microcavities with Spatially Controlled Carrier Injection <i>S. N. M. Mestanza, A. A. Von Zuben, and N. C. Frateschi</i>	364
