Contents

Introductionxxvii

Part 1 • Installing Red Hat Enterprise Linux **1**

Chapter 1 • Introducing Red Hat Enterprise Linux **3**

- Introducing Red Hat Enterprise Linux 3 4
- Basic Hardware Requirements 4
 - New Features 6
 - Basic Components 7
- A Short History of Unix and Linux 9
 - Unix and the Coming Internet 9
 - Unix Alternatives 11
 - The Free Software Foundation 12
 - Linus Develops a Kernel 12
- Exploring the Kernel 12
 - Configuring the Kernel 13
 - The /proc Filesystem 13
 - Modular or Monolithic 13
- Why Choose Linux? 14
 - Control 14
 - Cost 15
 - Reliability 15
 - Support 16
- The Role of a Linux Computer 16
 - Linux as a Server 16
 - Linux on the Desktop 17
 - Red Hat Enterprise Linux 3 Workstation 18
 - Red Hat Enterprise Linux for Small Businesses 18
 - Red Hat Enterprise Linux for Bigger Business 19
- Summary 19

Chapter 2 • Preparing Your Hardware **21**

- Creating Hard Disk Partitions 22
 - Partition Styles 22
 - Partition Names 23
- Configuring Microsoft and Linux with a 32-Bit Architecture 23
 - The Easy Way: A New Hard Drive 24
 - The Cheaper Way: An Existing Hard Drive 25
 - Step-by-Step Procedure for VFAT Partitions 27
 - Generic Procedure for NTFS Partitions 29
- Why Worry about Hardware? 30
 - Hardware Problems Can Be Expensive 30

Not All Hardware Is Built for Linux	31
Red Hat Enterprise Linux Supports Many Architectures	31
Finding Compatible Hardware	32
Red Hat Enterprise Linux–Certified Hardware	33
Compatible Hardware	33
Questionable Hardware	34
Community Knowledge Hardware	36
Creating a Hardware Checklist	37
Collecting Information	37
Collecting Drivers	38
Hardware Checklist	38
BIOS Tips	39
IDE Hard Drives	40
SCSI Hard Drives	41
Boot Sequence	41
Non-Plug-and-Play Hardware	41
Post-Installation Hardware Configuration	42
Quick Checks with redhat-support-check	42
/proc directory	42
The Red Hat Hardware Browser	43
The Red Hat Keyboard Tool	44
The Red Hat Mouse Configuration Tool	44
Sound Card Management (redhat-config-soundcard)	45
Forcing Hardware Detection with kudzu	46
Summary	46
Chapter 3 • Installing Linux on a Stand-Alone System	49
Starting with a Boot Disk	50
Creating a Boot or Driver Disk	50
Analyzing the Red Hat Boot Floppy	52
Analyzing the Storage Device Driver Disk	54
Analyzing the Network Device Driver Disk	54
Analyzing the PCMCIA Driver Disk	54
The Boot ISO	55
Checking the Installation CDs	55
Inspecting CDs with mediacheck	55
Checking CDs with md5sum	57
Installing Red Hat Enterprise Linux, Step by Step	57
Selecting Installation Prompt Options	59
Configuring Basic Parameters	62
Setting Up Hard Drives	68
Setting Up Partitions with Disk Druid	70
Configuring Installation Details	79
Selecting Package Groups	88
Ready to Install	96
Anaconda Installs Red Hat Enterprise Linux	96
Managing Post-Installation Steps	98

Running the Red Hat Setup Agent	102
Specifying a Date and Time	104
Creating a Regular User	105
Detecting a Sound Card	106
Registering with the Red Hat Network	106
Additional Installation	108
Troubleshooting the Installation	109
Installation Virtual Consoles	109
Package Status	114
Logging In	114
Upgrading Red Hat Enterprise Linux	116
Allowable Upgrades	116
Making an Upgrade	116
Summary	118
Chapter 4 • Installing Linux over a Network	121
Preparing an NFS Server	122
Copying Files	122
Sharing Directories	123
Setting Installation Parameters	124
Preparing an Apache Web Server	125
Copying Files	126
Sharing Directories	127
Setting Installation Parameters	128
Preparing an FTP Server	128
Copying Files	129
Sharing Directories	130
Setting Installation Parameters	130
Configuring a PXE Boot Server	131
Preparing a PXE Boot Server	131
Using the First Time Druid	132
Copying to the TFTP Server	132
Adding Hosts	133
Starting the Boot Server	134
Configuring DHCP	134
Starting a PXE Network Installation	135
Starting a Linux Network Installation	135
Making Boot Disks	136
Text Mode: Booting	137
Text Mode: Step by Step	139
Text-Mode Upgrades	170
Troubleshooting a Network Installation	172
Checking the Messages	172
Checking the Network	173
The Firewall on the Server	173
Address Settings	173
Summary	174

Chapter 5 • Kickstarting Linux	175
Grouping Packages: comps.xml	176
Basic comps.xml Stanzas	176
Mandatory Groups	177
Package Groups	179
Package Group Categories	185
Editing Examples	186
Analyzing Your Default Kickstart Configuration	187
Preinstallation Commands	188
Basic Configuration	188
Graphics	191
Network Settings	191
The Root Password	192
Firewalls	192
Authentication Options	193
Hard Drive Partition Setup	193
Packages and Groups	194
Postinstallation Commands	195
Other Commands	195
Working with the GUI Kickstart Configurator	196
The Basic Configuration Menu	197
The Installation Method Menu	198
The Boot Loader Options Menu	199
The Partition Information Menu	200
The Network Configuration Menu	202
The Authentication Configuration Menu	203
The Firewall Configuration Menu	204
The X Configuration Menu	205
The Package Selection Menu	206
The Pre-Installation Script Menu	206
The Post-Installation Script Menu	207
The Next Steps	207
Kickstarting from a Boot Disk	207
Files on a Boot Floppy	207
Files on a Boot CD	208
The Installation Procedure	209
Testing Kickstart	210
Summary	210
Part 2 • Linux Fundamentals	211
Chapter 6 • Starting at the Command Line	213
Exploring Navigational Commands	213
pwd	214
cd	214
ls	214
Path Management	216

Setting Up Files and Directories	216
touch	216
cp	217
mv	218
rm	218
ln	218
mkdir and rmdir	220
Managing Files	220
file	221
cat	221
head and tail	221
more and less	222
Permissions	222
umask	224
Manipulating Files	224
wc	224
find	225
locate and slocate	225
grep	226
Command Combinations	226
Using the vi Editor	227
Command Mode	227
Insert Mode	228
Execute Mode	229
Understanding Other Text Editors	230
emacs	230
pico	230
joe	232
Summary	232
Chapter 7 • A Filesystem Primer	233
Understanding the Filesystem Hierarchy Standard	233
The Basic Linux Directory Structure	234
Partition Schemes	235
Managing Partitions	236
Adding Partitions with fdisk	236
Revising Partition Labels	240
Using Formats and Journals	241
Basic Linux Formats	241
Formatting a Partition	242
Tuning	242
Disk Management	243
Extended Partition Data	244
Mounting Directories	244
Troubleshooting	245
Mastering /etc/fstab	247

Using the Automounter Alternative	248
Basic Configuration Files	249
Sample Setup	249
Exploring Logical Volume Management	250
Fundamentals	251
Creating a Physical Volume	251
Creating a Volume Group	252
Creating a Logical Volume	252
Summary	253
Chapter 8 • Making the Shell Work for You	255
Managing the Shell	255
Interactivity	256
Command Completion	257
Configuring the Shell	258
Shell Variables	258
Environment Variables	260
Discovering the Secrets of the Shell	261
Data Streams	261
Running in the Background	263
Special Shell Characters	264
Tildes and Home Directories	265
Connecting the Dots	265
Wildcards	265
Slashes in the Shell	266
Quotes	267
Aliases	267
Creating Basic Scripts	268
Basic Script Language	268
Sample Scripts	270
Create Your Own Script	270
Make It Executable	270
Summary	271
Part 3 • Basic Linux Administration	273
Chapter 9 • Administering Users and Groups Securely	275
Basic User and Group Management	276
/etc/passwd	276
/etc/shadow	276
/etc/group	278
/etc/gshadow	278
/etc/skel	280
/etc/login.defs	280
Administering User Accounts	281
Adding Users	281
Using newusers	284

Deleting Users	284
Managing User Access with chage	285
The Red Hat User Manager	285
The root Account and sudoers	288
Limiting root Access with wheel	289
Using the Shadow Password Suite	289
Strong Passwords	289
Converting User Passwords	290
Converting Group Passwords	290
Setting Quotas	290
Configuration	291
Quota Monitoring	294
Creating User Private Groups	295
The Red Hat Scheme	295
Creating a Shared Directory	295
Summary	296
Chapter 10 • Managing and Updating Packages with RPM	297
Installing and Upgrading, Simplified	298
Queries	298
The Basic Installation	300
Upgrades	302
Dependencies	303
Deletions	303
A Database of RPMs	304
Extracting a Single File	304
Using the Red Hat GUI Package Management Tool	305
Configuring Access to a Network Installation Source	305
Managing Packages by Group	306
Making Source RPMs Work	307
Directories	307
The Spec File	307
Building Binaries from a Tarball	308
Building a Binary RPM	309
RPM Security	309
RPM and Pretty Good Privacy	309
Verifying a Package	310
Verifying a File	310
Updating RPMs	312
The Red Hat Network	313
A Special Agent: up2date	318
Network Alert Notification	322
Fedora Updates	324
Rebuild Distribution Servers	325
Older Versions of Red Hat	326
The yum Alternative	326
Summary	329

Chapter 11 • Configuring and Troubleshooting the Boot Process 331

Exploring the Basic Boot Process	331
Initializing Hardware	332
Bootloaders	332
Runlevels	332
Understanding the Default Configuration Files	332
Hardware Detection	333
The /etc/modules.conf Settings	334
Listing Modules	335
The Bootloader	336
/etc/inittab	338
Starting a Runlevel	340
Troubleshooting and Using Rescue Disks	341
The Specialized Boot Disk	342
Rescue Mode	342
Single-User Mode	345
Other Runlevels	347
Summary	347

Chapter 12 • Upgrading and Recompiling Kernels 349

Why Bother?	350
“Upgrading” the Easy Way	351
Installing the Newest Red Hat Kernel	351
Bootloader Updates	353
Kernel Version 2.6	354
Exploring Sources, Tarballs, and Patch Alternatives	355
The Red Hat Enterprise Kernel Source	355
Download Sources	356
Setup	356
The Patch Alternative	356
Customizing a Kernel	357
Preparing the Source	358
Customizing the Configuration	360
Creating Dependencies	361
Making a Kernel Image	361
Building Modules	362
Setting Up Configuration Menus	362
Kernel RPM Packages	362
Make Menus	363
Kernels, Section by Section	367
Basic Configuration Menus	368
Storage Devices	371
Networking	374
External Hardware	380
Other Hardware Support	381
Other Software Support	385

Updating the Bootloader	388
Inspecting GRUB	388
Inspecting LILO	389
Summary	391
Chapter 13 • The Administrative Nitty-Gritty	393
Using the cron Daemon	394
Formatting cron	394
The Syntax of cron	395
Standard cron Jobs	395
User cron Jobs	396
cron Security	397
Adding anacron	397
Using the at Daemon	398
Setting Up an at Job	398
Job Queue	398
Batch Jobs	399
Security	399
Service Management Tools	399
/etc/rc.d/init.d Scripts	399
Activation at Different Runlevels	401
Troubleshooting with Logs	403
Log File Categories	403
System Logs	404
Daemon Logs	407
Other Logs	408
Configuring Remote Logs	408
GUI Logs	409
Process Management	410
Processes and ps	411
Processes and memory with top and free	411
Logins with who and w	412
Process kill	412
nice and renice	413
Leaving a nohup	413
Using Related Configuration Tools	414
Tuning the Kernel	414
Setting the Date and Time	414
Summary	416
Chapter 14 • Backing Up Your System	419
Exploring Backup Concepts	419
Data Disaster Scenarios	420
Levels of Backup	420
Backup Type and Frequency	422
Selecting Your Media	422
Tape Drives	423
CD/DVD Backups	423

Using Backup and Restore Commands	424
Generic Backup Commands	424
Tape dump and restore	426
Backup Commands for CDs/DVDs	430
Transferring Fast with rsync	433
Understanding RAID	434
RAID Options	434
Configuring RAID 0	435
Configuring RAID 1	435
Configuring RAID 5	435
Software and Hardware RAID	435
Creating RAID Partitions	436
Configuring /etc/raidtab	437
Creating the RAID Device	439
Mounting RAID	439
Summary	440
Part 4 • Basic Linux Services	441
Chapter 15 • A TCP/IP Primer	443
Exploring Network Fundamentals	444
LANs and WANs	444
The Internet	444
Domains	445
Hostname	445
Hardware Address	445
Understanding Protocol Stacks	445
OSI Levels	446
NetBEUI	448
IPX/SPX	448
Learning the Basics of TCP/IP	448
The TCP/IP Model	448
Major Protocols	449
Important Service Definitions	452
Using IP Addressing	452
IP Version 4	452
Address Classes	454
IP Version 6	454
IP Version 6 Support	455
Summary	456
Chapter 16 • Managing Linux on Your LAN	459
Understanding Network Hardware	460
Transmission Media	460
Hubs	460
Switches	461

Routers	461
Gateways	461
Configuring Your Computer on a LAN	461
Configuring with ifconfig	462
Configuring with arp	463
The Hostname Commands	464
Network Configuration Files	464
Configuring Private and Public Networks	466
Private IP Networks	467
Configuring a Network	468
Classless Inter-Domain Routing (CIDR)	469
Creating Network Connections	471
The Red Hat Network Configuration Tool	472
Text-Mode Network Configuration	473
Setting Up a Network Adapter	475
Using minicom	481
Virtual Private Network Connections	484
Troubleshooting Your Network	489
Checking Network Status	489
Checking Connections with ping and traceroute	490
Summary	491
Chapter 17 • Securing Your Linux Network	493
Understanding Best Practices	494
Physical Setup	494
Disable Unneeded Services	494
Encryption	496
Password Security	496
Firewalls and DMZs	497
Using Pluggable Authentication Modules	498
Basic Configuration	498
Module Types	499
Control Flags	499
A PAM Example	499
Creating Firewalls	500
Data Directions and iptables	501
Firewalls as Chains	501
Format of iptables	502
Options for iptables	502
Patterns for iptables	503
Actions for iptables	505
Putting It All Together	506
The Red Hat Security Level Tool	508
The Console Security Level Tool	509
Rebuilding a Firewall	510
Setting Up IP Masquerading	511
Functionality	511
IP Masquerading Commands	511

Detecting Break-ins	512
Sniffing with Ethereal	512
Checking Logins	513
Tripwire and Suspicious Activity	513
Troubleshooting Access Issues	515
Too Much Security	516
Denial or Rejection	516
Summary	516

Part 5 • Basic Linux Services 519

Chapter 18 • Remote Environments 521

Using Typical Extended Services	522
The xinetd Configuration File	522
Activating xinetd Services	523
Kerberos Telnet	524
FTP Servers	525
Other Super Server Services	525
Controlling Access with TCP Wrappers	526
Regulating Access	526
The xinetd Firewall	526
Understanding the Secure Shell (SSH)	528
SSH Installation	528
SSH Configuration	529
Sample Session	529
Troubleshooting Access Issues	530
Check That the Service Is Installed	530
Verify That the Service Is Active	530
Inspect the Service-Specific Security Files	531
Inspect the Extended xinetd Security Files	531
Check the Firewall iptables Chains	531
Configuring a Diskless Workstation	531
Setting Up a Directory on the Server	532
Starting TFTP for Access	533
Configuring a DHCP Server for Diskless Access	533
Configuring NFS on the Server	534
Setting Up the Network Booting Service	534
Booting a Diskless Workstation	536
Summary	537

Chapter 19 • DNS and DHCP 539

Configuring a DNS Server	539
Packages	540
DNS Concepts	540
Initial DNS Configuration	541
DNS Configuration Files	541
DNS Database Files	544

Starting and Testing Your DNS Server	548
A DNS Forwarding Server	549
A DNS Caching-Only Nameserver	550
A DNS Slave Server	551
Using a DNS Client	551
Setting Up a DHCP Server	552
Basic Configuration	552
The Configuration File: /etc/dhcpd.conf	552
Starting the DHCP Server	554
DHCP Servers and Remote Networks	555
A Lease Database	555
Working with DHCP and BOOTP Clients	556
Applicable /etc/sysconfig Files	556
dhclient	557
Summary	557
Chapter 20 • Printing with CUPS	559
Using the Internet Printing Protocol	559
Red Hat's Printer Configuration Tool	561
Configuring the Common Unix Printing System	565
Web-based Configuration	566
The lpadm Command	573
The lpstat Command	573
Configuration Files	573
/etc/cups/cupsd.conf	574
Printer Management	584
Printer Management Commands	586
Summary	589
Chapter 21 • Mail Services	591
Examining General Mail Services	592
Key Protocols	592
Alternate Mail Servers	592
Switching Between Mail Services	593
Configuring sendmail	593
Packages	594
Basic Configuration Files	594
Understanding sendmail.mc	596
Revising sendmail.mc	601
Understanding and Revising submit.mc	602
Processing and Reactivating sendmail	603
Setting Up Postfix	603
Basic Files and Packages	603
Example Configuration	604
Processing and Activating Postfix	605
Using Incoming E-mail Servers	605
The POP3 E-mail Server	606
The IMAP4 E-mail Server	606

Configuring Mail Clients	606
Text-Based Clients	606
Graphical Clients	608
Summary	611

Part 6 • Linux File Sharing Services 613

Chapter 22 • Linux Sharing Services: FTP and NFS 615

Using FTP as a Client	616
Basic Commands	616
Connecting to ftp.redhat.com	617
The GUI FTP Client	618
Configuring the Very Secure FTP Server	620
Basic Security Features	620
Configuration Files	620
Configuring WU-FTP with Real Users	625
Configuration Files	625
Commands	629
Anonymous Uploads	630
Creating an Anonymous FTP Server	630
Configuring vsFTP	630
Configuring WU-FTP	631
Setting Up Anonymous Directories	631
Configuring Network File System Servers	633
NFS Packages	633
Basic Daemons	633
Setting Up Exports	634
Securing NFS	636
Starting NFS	637
Configuring with redhat-config-nfs	638
Working with NFS Clients	640
Listing Shared Directories	641
Mounting a Shared NFS Directory	641
Summary	642

Chapter 23 • Linux Authentication Services: NIS and LDAP 643

Setting Up Network Information Service Servers	643
NIS Packages	644
Defining the NIS Domain	645
Defining Shared Files	645
Creating a Database Map	647
Updating the Database Map	649
NIS Server Configuration Files	649
NIS Slave Servers	650
Using NIS Clients	651
NIS Client Configuration in yp.conf	651

NIS Client Commands	651
Configuring /etc/nsswitch.conf	652
Setting Up the Lightweight Directory Access Protocol	653
Installing OpenLDAP Packages	653
Basic LDAP Definitions	654
Configuring an OpenLDAP Server	654
Starting LDAP	656
Adding Data to an LDAP Server Database	657
Migrating Authentication Data to LDAP	657
Configuring LDAP Clients	658
Configuring LDAP Clients in /etc/ldap.conf	659
Configuring /etc/nsswitch.conf	659
Running the Red Hat Authorization Configuration Tool	659
Summary	660
Chapter 24 • Making Samba Work for You	663
Bridging the Gap between Linux and Microsoft Windows	664
Functioning on a Microsoft Network	664
Licensing	664
Definitions	665
Packages	665
Configuring Samba as a Client	666
Shared Samba Directory	666
Samba Terminal Mode	669
Connecting to a Printer	669
Understanding the Samba Configuration File	670
Samba Daemons	671
Other Samba Configuration Files	671
The Main Samba File: smb.conf	673
A Samba Troubleshooting Checklist	688
Managing Samba Users and Computers	691
Configuring Computer Accounts	691
Samba Management Commands	692
Using the Samba Web Administration Tool (SWAT)	694
The Home Menu	695
Samba Configuration Wizard	696
The Globals Menu	697
The Shares Menu	699
The Printers Menu	699
The View Menu	700
The Password Menu	700
The Server Status Menu	702
Using the Red Hat Samba Server Configuration Tool	702
Server Settings	704
User Management	704
Creating a New Share	705
Summary	706

Chapter 25 • Web Services	707
Exploring Web Server Options	708
Learning Apache Basics	709
Apache 2.0	709
Stronghold Features	709
Packages	710
Configuring Apache	711
Starting Apache	712
Customizing Apache	713
Virtual Hosts	738
Customizing Apache Modules	739
Secure Apache Virtual Hosts	739
User-Based Security	743
Troubleshooting Apache	744
Configuring with the Red Hat GUI Apache Tool	745
Setting Main Apache Parameters	746
Configuring Virtual Hosts	747
Configuring the Server	752
Performance Tuning	753
Incorporating the Red Hat Content Accelerator	754
Installing and Starting TUX	754
Deciphering the Content Accelerator Configuration	755
Combining TUX and Apache	756
Introducing Caching Services	757
Squid Hardware	757
Squid Configuration	758
Activation	758
Configuring Clients on Squid	758
Summary	759
Chapter 26 • Setting Up MySQL for Databases	761
Installing the MySQL Packages	761
The SQL and MySQL Package Groups	762
Other SQL Servers	764
Analyzing the MySQL Configuration Files	765
/etc/my.cnf	765
my-small.cnf	767
my-medium.cnf	769
my-large.cnf	769
my-huge.cnf	770
Creating a Working Configuration	770
Starting a MySQL Server	770
MySQL Users	770
Managing a MySQL Database	773
Creating a Database	773
Adding Data	774

Loading Database Files774
 Changing Data Entries775
 Summary775

Part 7 • A Certification Primer777

Chapter 27 • Generic Linux Certifications779

Preparing for the CompTIA Linux+ Exam780
 The Exam780
 Installation781
 Management/Maintenance782
 Configuration784
 Security784
 Documentation785
 Basic Linux Hardware785
 Non-Linux Hardware Issues786
 Studying for the LPI Level I Exams787
 General Linux I787
 General Linux II790
 Planning for the SAIR Linux Certified Administrator Exams794
 Installation and Configuration794
 System Administration797
 Networking800
 Security, Ethics, and Privacy804
 Summary807

Chapter 28 • Red Hat Certifications809

Looking Over the Red Hat Exams810
 An Overview of the RHCT Exam810
 An Overview of the RHCE Exam811
 Exploring the Prerequisites811
 Basic Hardware Knowledge813
 Basic Linux/Unix Knowledge813
 Filesystem Hierarchy813
 Basic File Operations814
 Printing814
 Understanding the Shell814
 Security814
 System Administration815
 Network Services816
 Network Clients816
 Basic Network Security817
 Understanding the RHCT Exam817
 The RHCT Troubleshooting and System Maintenance Exam817
 The RHCT Installation and Configuration Exam819
 What the RHCT Exam Does Not Cover820

Preparing for the RHCE Exam	820
The RHCE Troubleshooting and System Maintenance Exam	821
The RHCE Installation and Configuration Exam	823
Summary	825

Part 8 • Window Management 827

Chapter 29 • Managing X Servers and X Clients. 829
