Introduction xxv

Part 1 Building a Foundation 1

Chapter 1 Getting Started with Exchange 2000 3

Exchange 2000 Architecture Basics 5

 Exchange 2000 for Exchange 5.5 Administrators 5

 Exchange 2000 Dependencies 8

An In-Depth Look at Exchange 2000 Architecture 10

 Message Storage 10

 Message Access 14

 The Advanced Queuing Engine 16

 Event Sinks 20

 Exchange 2000 Connectors 21

 Exchange 2000 System Attendant 22

 Exchange 2000 Modes 23

Picking the Right Edition of Exchange 23

 Upgrading between Editions 25

Storage Considerations 25

 Storage Limits 26

 Server-Based Storage Versus Local Storage 28

Time Synchronization 29

 Synchronizing Windows 2000 Computers 29

 Synchronizing Non-Windows 2000 Computers 30

 Automatically Synchronizing Windows NT 4 Computers 31

Standardization 31

 Active Directory 32

Server Hardware Considerations 37

 Choosing Hardware Components 37

 Preventing Disasters with Hardware 37

 Hardware and Performance Tuning 41

	User Education	44
	Messaging Champions	46
	Getting the Training Done	46
	Other Training Topics	47
	Documentation for End Users	47
	And a Little Bit of Therapy on the Side...	48
Chapter 2	Active Directory for Exchange 2000 Administrators	51
	Active Directory and the Domain Name Service	52
	Active Directory Partitions	53
	Active Directory Sites	58
	Global Catalog Servers	59
	Locating Domain Controllers, Global Catalog Servers, and Servers Using DNS	64
	Operations Master Roles	66
	Whose Line Is It, Anyway?	68
	Assignment of Operations Masters Roles	69
	Exchange 2000's Effect on Active Directory.	70
	Configuration Queries and Address Lookups	70
	MAPI Client Lookups	71
	Preparing the Active Directory Forest and Each Domain	74
	Pre-Installation Checks	74
	Forest Prep	75
	Domain Prep	78
	Active Directory Groups	80
	Creating a Mail-Enabled Group	81
	The Mail-Enabled Group Expansion Quandary	82
	Other Group-Related Issues	85
	Active Directory Customization.	89
	Creating Administrative Groups before Exchange Installation	89
	Customizing Automatic Display Name Generation	90
	Adding Exchange Mailbox Management Extensions	92
	Global Address Lists and Address Lists	93

	Extended Attribute Names	102
	Recipient Policies	104
	Ambiguous Name Resolution (ANR)	107
	Letting Users Manage Their Own Directory Attributes	108
	Importing and Modifying Active Directory Data.	109
	Common LDAP Attribute Names	110
	Using the LDIFDE Utility	113
	The Recipient Update Service	115
	Recipient Update Service and Address Lists	115
	Configuring the Recipient Update Service	116
	Exchange 2000 and Active Directory FAQ.	118
Chapter 3	Exchange 2000 Migration and Upgrades	119
	Considering Factors before Migrating/Upgrading	121
	Successfully Deploying Windows 2000	124
	Understanding Your Current Organization	125
	Checking Permission Consistency before Upgrading	129
	Cleaning Up the Exchange 5.5 Directory	130
	Making Sure You Have the Right Permissions	132
	First Exchange 2000 Server Installation Permission Requirements	132
	Subsequent Exchange 2000 Servers Installation Permission Requirements	133
	Exchange 5.5 Server to Exchange 2000 Upgrade Permission Requirements	133
	Distribution Lists and Permissions	133
	Changing Your Site Architecture	134
	Understanding Active Directory and the AD Connector	135
	Permissions Needed by Active Directory and the Active Directory Connector	136
	The Active Directory Connector	138
	To Migrate Or to Upgrade?	153
	Upgrading to Exchange 2000	154
	Migrating to Exchange 2000	154

Installing New Servers into an Existing Site and Moving Mailboxes	156
Installing a New Exchange 2000 Server	157
Migrating to Exchange 2000 Using the Swing Method	163
Moving Public Folders to the Swing Server	165
Swinging Back to the Original Server	166
Upgrading an Existing Exchange 5.5 Server	166
Decommissioning Your Last Exchange 5.5 Server	168
Site Replication Service and Recipient Update Service	168
Site Replication Service (SRS)	168
Recipient Update Service (RUS)	169
After the Upgrade	170
Debugging an Installation	170
Switching to Exchange 2000 Native Mode	173
Manually Configuring Message Journaling	174
Deleting Uninstalling Servers from Active Directory	175
Enabling Secure Sockets Layer	175
Frequently Asked Questions	175

Part 2 Operations 177

Chapter 4 Maintenance and Management	179
Daily and Weekly Maintenance.	180
Daily Maintenance	180
Weekly Maintenance	188
Long-Term Maintenance	189
Restricting Access to the Exchange Server	194
Restricting Access to Specific Users Only.	194
Restricting Access to Specific MAPI Clients	195
Applying Policies	197
Permissions to Assign Policies	198
Server Policies	200
Mailbox Store Policies	202

	Public Folder Store Policies 205
	System Policies FAQ 207
	Database Technology, Storage Groups, and Stores 208
	Exchange Database Technology 208
	Storage Groups. 216
	Stores 219
	Accessing Storage through Exchange Installable File System. 228
	Managing Mailboxes 230
	Controlling Mailbox Storage 230
	Using Mailbox Manager 235
	Automatic Message Archival 243
	Moving Mailboxes. 250
	Controlling Mail-Enabled Groups 251
	Limiting the Number of Recipients and Message Size 252
	Reconnecting and Purging Mailboxes 254
	Dealing with the Recently Departed 255
	Don't Delete That Mailbox! 255
	Sending Everything to One Place 258
	Stop Calling Here! 258
	Customizing Details Templates 259
	Customizing a Details Template 260
	Full-Text Indexing 264
	Is Full-Text Indexing for You? 264
	Indexing Architecture. 265
	Creating Full-Text Indexes 269
	Disaster Prevention Tips 271
Chapter 5	Status Monitoring and Reporting 273
	Using the Monitoring and Status Tools 274
	Configuring Resource Status Monitors 275
	Configuring Notifications 280
	Customizing Your Own Tools 283
	Exchange 2000 Resource Kit Tools 283

	System Monitor	286
	MADMAN MIB	291
	E2KUptime Utility	291
	Message Tracking	292
	Message Archiving.	298
	Enabling Message Archiving	299
	Managing Archived Mail Storage	300
	Reporting	301
	Storage Used	301
	Protocol Usage	303
	Automatically Sending E-mail from the Command Prompt	305
	Third-Party Reporting and Monitoring Tools	308
	Legal Issues Surrounding E-mail Systems	309
Chapter 6	Performance Monitoring and Optimization	313
	The Holistic Approach to Performance Monitoring	314
	Performance Monitoring 101: Using System Monitor	316
	Monitoring Windows 2000	322
	Useful Windows 2000 Performance Monitor Counters	323
	Monitoring Exchange 2000	326
	Exchange 2000 Performance Monitor Objects	327
	Useful Exchange 2000 Performance Monitor Counters	329
	Optimizing Exchange	336
	Optimizing Active Directory Access.	337
	Optimizing Database Performance	341
	Optimizing an SMTP Bridgehead Server	345
	Optimizing Outlook Web Access.	347
Chapter 7	Backup and Disaster Recovery	351
	Backing Up Exchange	353
	Backup Hardware and Software	354
	Online Backups Versus Offline Backups	356
	Exchange Backup Options	356
	Performing a Server Backup	357

	Sample Backup Rotations366
	Exchange 2000 Backup FAQ374
	Disaster Recovery 101375
	What Do You Want to Recover Today?376
	We Don't Need No Stinkin' Plans!.377
	Does Anyone Know Where the Exchange Server CD-ROM Is?378
	Practice Makes Perfect379
	Disaster Recovery Tips381
	Speeding Up Disaster Recovery382
	Practicing Disaster Recovery382
	Testing Complete Server Failure383
	Disaster Recovery Scenarios384
	Recovering a Deleted Item, Deleted Folder, or Deleted Mailbox384
	Recovering a Deleted Item or Deleted Folder385
	Recovering a Deleted Mailbox385
	Restoring Service Now and Data Later387
	Recovering a Corrupted Information Store.388
	Recovering an Entire Server394
	Restoring to a Recovery Server396
	Restoration and Disaster Recovery FAQ.403
	Repairing a Damaged Store404
	The ESEUTIL Program404
	The ISINTEG Program409
	Corrupted Messages414
	Database Utilities FAQ415
Chapter 8	Clustering Exchange 2000.417
	Clustering 101.418
	Components of a Windows 2000 Cluster420
	Exchange 2000 Cluster Basics423
	Failover and Failback425

Hardware Requirements	427
Cluster Server Hardware Scalability	427
Should You Cluster?	428
Clustering and Server Roles	430
Installing a Cluster	430
Prerequisites	431
Installing a Windows 2000 Cluster	432
Installing Exchange 2000 into a Cluster	437
Moving to an Exchange 2000 Cluster	443
Rolling Upgrades on the Cluster	443
Cluster Operations	446
Forced Failovers	446
Monitoring Cluster Performance	447
Best Practices	447
Chapter 9 Public Folders	449
What's New with Exchange 2000	450
Managing Public Folders	451
Designing Public Folder Structure and Hierarchy	452
Public Folder Stores and Trees	456
Full-Text Indexing and OWA	461
Setting Limits	462
MAPI Client Connections to Public Folders	463
Public Folder Referrals	464
Exchange 2000 System Folders	466
Creating Organizational Forms Libraries	467
Solving Problems with System Folders	467
Security and Public Folders	468
Security via Groups	469
Setting Permissions	470
Assigning Access Permissions	472
Public-Folder Replication	477
Picking a Replication Design	478

	Monitoring Modifications and Replication Conflicts	479
	Creating a Public Folder Replica	482
	Replicating Public Folder Content from Exchange 5.5	483
	Monitoring Public-Folder Replication	485
	Diagnostic Logging for Public Folders	486
	Out of Sync Public Folders and Backfill	487
	Assigning a Public Folder a New Home	488
	Offline Replication Capabilities.	488
	Removing a Replica	489
	Public Folder Best Practices	489
Chapter 10	Automating Tasks	491
	Things That Go Bump in the Night	492
	Information Store Maintenance	492
	The System Attendant	495
	Exchange 2000 Event Sinks	499
	Types of Store Events.	500
	Transport and Protocol Events.	502
	Sample Event Sinks	505
	Determining What Event Sinks Are Installed	507
	Scripting and Exchange 2000.	507
	Creating a User and Mailbox Object	508
	Event Services	509
	Enabling Event Agents and Permissions	510
	Creating Event Agents	511
	Client Automation	513
	Automatically Creating Profiles	513
Part 3	Security	517
Chapter 11	Security within the Network	519
	Administrative Security	520
	Built-In Administrative Permissions	520
	Administrator Roles	522

	Segmenting and Customizing Administrative Roles	524
	Accessing Mailboxes	530
	What Permissions Do I Require?	535
	Client Authentication	537
	Integrated Windows Authentication	538
	Internet Client Authentication.	542
	Communication between Exchange 2000 Servers	551
	Message Data Format between Exchange Servers	551
	Securing Server-to-Server Communications	553
Chapter 12	Messaging Security	559
	Message Vulnerability	560
	Message Capture on the Wire	560
	Secure Messaging Should Be...	564
	Encryption Basics	564
	Common Encryption Terms	565
	The Key to Encryption	568
	Certificates	570
	The Key Management Service	577
	Configuring the Windows 2000 Certificate Authority	577
	Installing the Key Management Service	578
	Using the Key Management Service	580
	Enabling Advanced Security on the Client Side	587
	Enrolling the User	587
	Enabling Outlook for Advanced Security	588
	Using Outlook and Advanced Security.	590
	Getting Certificates from Outside Users	594
Chapter 13	Securing Your Exchange Servers	597
	Protecting Your Exchange Server from Outside Compromise	598
	Protecting against Viruses	607
	Restricting Attachments	608
	Content Inspection Gateways.	609
	Exchange Server-Based Virus Scanning	612

	Cleaning Up an Infection. 613
	Virus-Protection Best Practices. 616
	SMTP Mail and Security 617
	Understanding SMTP Headers. 617
	SMTP Relay 619
	Black Hole Lists. 624
	Blocking Unwanted SMTP Traffic 624
	Exchange, Firewalls, and Proxy Servers 627
	Firewalls 101. 627
	Exchange 2000 TCP/UDP Port Usage. 630
	Exchange 2000 and Microsoft Proxy 2 635
	Configuring Firewall Support for Exchange 637
	Exchange 2000 and Microsoft ISA Server. 639
	ISA Server Basics 640
	Exchange behind ISA Server 645
	ISA Server Best Practices 653
Part 4	Connectivity	655
Chapter 14	Connectivity within Your Organization 657
	SMTP Basics 658
	Exchange 2000 Message Transport Architecture 659
	SMTP Extensions Supported 662
	Establishing an SMTP Session. 666
	SMTP Virtual Servers 671
	SMTP and Diagnostics Logging 676
	SMTP Virtual Server Configuration Recommendations. 677
	Using the SMTP Virtual Server Pickup Directory 679
	Customizing SMTP and SMTP Virtual Servers 680
	Global Settings 680
	Message Format 682
	Allowing SMTP Relay. 685
	Defining Inbound SMTP Domains. 685

	Resolving Inbound SMTP Addresses	689
	Changing the SMTP Banner	690
	Disabling Extended SMTP Command Verbs	691
	Routing Groups	692
	Designing an Effective Routing Group	693
	Administrating Routing Groups	694
	The Link State Table	695
	Connecting Routing Groups	699
	Routing Group Connectors	700
	X.400 Connectivity	706
	Configuring X.400 Connectors	707
	SMTP Connectivity	716
	Configuring an SMTP Connector	717
	Queuing and Dequeuing Mail	722
	Connectivity Best Practices	726
Chapter 15	Internet Client Connectivity	727
	POP3 and IMAP4 Virtual Servers	728
	Implementing POP3 and IMAP4 Servers	729
	Outlook Web Access	737
	OWA 2000 Features and Architecture	737
	Customizing Outlook Web Access	745
	Successfully Deploying OWA 2000	756
