

## Subject Index

### a

- abrasion 347
  - due to shear forces 356
  - particle-particle collisions 356
- acetic acid (vinegar) 301
  - degradation 311
- Acetobacter* 301
- acetyl esterases 224
  - pectin 224
- N*-acetyl-(*S*)-tyrosine-ethyl-ester 352
- acidifying bacteria 309
- Acinetobacter calcoaceticus* 121
- acrylamide 13, 147, 245
  - derivatives 251
- acrylic-type polymers 257
- acrylonitrile elimination 318
- activation energy 40
- activator molecules 61 ff.
- active center 35
  - *see also* active site
- active site 35, 38
  - residues 34
  - structure 38
  - titrations 350
- N*-acylamino acid racemases 163
- acylases 233
- acyl-enzyme 41
  - intermediate 36
- adenosine-triphosphatase 51
- adhesion 302 ff.
  - carriers 302
- adsorbed enzyme 356
  - desorption 356
- adsorbents 190
  - bifunctional (multimode) 190
- adsorption 258 f., 301 f., 305
  - enzymes 258
  - ion-exchangers 258
  - isotherm 250
- agarose, pore structure 253
- aggregation 32, 287 ff.
  - kinetic model 290
  - – *Aspergillus niger* 290
- Agrobacterium tumefaciens* 226
- alanine racemase 161
- alcohol dehydrogenases 112
- alcohols 113
  - optically active 113
  - primary 131
  - secondary 133
  - tertiary 130
- aldolases 157 ff., 225
  - DHAP-dependent 159 f.
  - mechanism 158
  - pyruvate/phosphoenolpyruvate-dependent 160
- alginate 293 ff.
  - crosslinking 293
  - entrapment of cells 296 ff.
  - structure 294
- alginate beads 297
  - size distribution 297
- allergic reactions 221
- allergic response 191
- allergies 18
- Amberlite 256
- amino acid 113 ff., 162, 273 ff.
  - dehydrogenases 114
    - – catalytic mechanism 114
  - enantiopure 274
  - oxidase 385, 388
  - production 228
  - synthesis 113 ff., 273
- $\alpha$ -amino acids 114, 133
  - non-proteinogenic 114
- $\alpha$ -amino- $\epsilon$ -caprolactam racemase 162
- D*-amino acid oxidase 174, 245
- D*-amino acids 245
- L*-amino acids 245, 273
  - production 273

- reactor system 273
  - amino acylase 274
  - stereospecific hydrolysis by 274
  - 7-amino cephalosporanic acid (7-ACA) 13, 140, 245, 273, 381 f.
  - enzymatic overall process for the production 384
  - aminoacylase 245, 273
  - 6-aminopenicillanic acid (6-APA) 13, 16, 245, 382
  - ammonia 317
  - oxidation 292, 317
  - amoxicillin 13, 415
  - synthesis 85, 415
  - ampicillin 141
  - amylase 13, 60, 97, 211 ff.
  - hyperthermophilic 407
  - temperature-dependence of the activity 60
  - $\alpha$ -amylase 213
  - active site 215
  - catalytic mechanism 215
  - catalytic residues 215
  - substrate and product selectivity 217
  - substrate-binding region 217
  - thermostable 217
  - $\beta$ -amylase 213
  - amyloglucosidase 208, 236, 276
  - immobilization 276, 416
  - inactivation kinetics 208
  - stabilization 236
  - thermostable 208
  - amylopectin 212
  - amylose 212
  - amylosucrase 216
  - active site 216
  - anaerobic bacteria 312
  - growth kinetics 312
  - anaerobic cultures 303
  - anaerobic degradation 309 f.
  - reaction pathways 309
  - reactions 310
  - anaerobic mixed cultures 307, 380
  - adhering 314
  - growth rates 307
  - anaerobic systems 312
  - animal cells 300
  - immobilization 300
  - antibiotics 24, 381
  - for human use 381
  - synthesis 24
  - antibodies, catalytic 100
  - apparent constants 354
  - arabanases 211, 224
  - l-arabanases 224
  - l-ascorbate synthesis 323
  - aspartame 13, 139, 245, 275, 415
  - enantioselectivity 275
  - regioselectivity 275
  - synthesis 275, 415
  - yield 275
  - aspartase 274
  - l-aspartate-4-decarboxylase 274
  - l-aspartic acid 274
  - Aspergillus* sp. 180
  - assay systems 91 ff.
  - fluorimetric 93
  - photometric 93
  - association constants, pH-dependence 69
  - asymmetric synthesis 110 f., 157
  - autoproteolysis 81, 180
  - autoproteolytic reaction 33
- b**
- Bacillus clausii* 174
  - Bacillus megaterium* 119
  - backmixing 393
  - bacteria
  - acetogenic 309
  - methanogenic 309
  - *Zymomonas* 298
  - Baeyer-Villinger monooxygenases 121 ff.
  - active-site 122
  - Baeyer-Villinger oxidation 123
  - mechanism 123
  - baking process 211
  - basic chemicals 5
  - batch operation 370
  - batch process 204
  - beer 9, 301
  - chill-proofing 9
  - maturation 301
  - production of low-alcohol 301
  - bentonite, adsorption capacity 250
  - binding, *see* immobilization
  - binding methods 258 ff.
  - binding subsites 34
  - binding yields 351
  - bioaggregates 305
  - biocatalysts 2, 206, 298, 333 ff.
  - distribution of yeast cells 298
  - inactivation 206
  - internet databases 422 ff.
  - productivity 334
  - space-time yield 334 ff.
  - – function of the biocatalyst content 335

- biocatalysts, immobilized 334 ff., 357
    - calculated data 357 ff.
    - experimental data 357 ff.
    - improving the performance 362
    - particle radius 338
    - pH-stability 357
    - precipitation of the product 361
    - required amount 346
    - storage 357
    - temperature-stability 357
  - biocatalytic processes 15
    - classification 15
  - bioconversions, sterol/steroid 326
  - biofilm 286, 288, 304 ff.
    - detachment by shearing 304
    - diffusion 286
    - formation 307
    - growth 304
    - mass transfer 286
    - mechanically stable 305
  - biofilter 309, 318 ff.
    - efficiency 319
    - mass transfer 319
    - operating parameters 321
    - pollutant concentrations 321
  - biogas 309
  - bioinformatics 31
  - biolite 308
  - biomass 2
    - production 3
    - turnover 3
  - biopolymers, hydrolysis 362
  - bioreactor, *see* reactor
  - bioscrubber 318
  - biotechnology 1
    - behavior 419 ff.
    - definition 5
    - information 419 ff.
  - biotransformation 321
    - by designed recombinant whole-cell systems 321
    - of exogenous substrates 300
  - bovine spongiform encephalitis (BSE) 174
  - bread manufacture 211
  - brewing process 211
  - bubble column 376
  - buffer 351, 389 ff.
    - ionic strength 351
    - pH-controlling 389
    - pK-value 351
  - Burkholderia* sp. 185
  - butyric acid, degradation 311
  - byproduct 21
- c**
- C. viscosum* 185
  - cacao butter 13
    - equivalents 128
  - CAD resins 260
    - derivatization 260
  - caprolactams 274 f.
    - stereospecific cleavage 275
  - captopril 132
  - carbamoylase 94, 150
  - L-carbamoylase 94
  - carbodiimide 261
  - carboxydrates 263 ff.
    - hydrolysis 263 ff.
    - modification 263 ff.
  - carboxymethyl cellulose 293
  - carboxypeptidase A 35 ff., 51
  - carrageenan 293 ff.
    - structure 294
  - carriers 248 ff., 258
    - accessible surface 249
    - characteristics 257
    - functional groups 254, 257
    - inorganic 251, 307
    - interactions of the surfaces 303
    - macroporous structure 257
    - microorganisms 307
    - natural organic 307
    - organic, natural origin 251
    - organic synthetic 251
    - pore diameter 249, 307
    - pores 249
    - porous materials 306
    - porous silica 306
    - properties 307
    - pumice 306
    - requirements for cell immobilization 302
    - sand 306
    - surface 249, 307
    - synthetic organic 307
    - synthetic polymers 256 ff.
  - cascades 370
    - mass balance 377
  - catalysis 244
    - advantages 244
    - heterogeneous 244
  - catalytic antibodies 100
  - catalytic site 54
  - catalytic triad 37, 127
  - celite 250
  - cell wall disruption 186
  - cells
    - adhering 304

- anchorage-dependent 284, 301
- animal 284
- attachment 301
- immobilized 285
- plant 284
- principles 285
- suspended 321
- cellulases 224
- cellulose 251, 302
  - CM 252
  - DEAE 251
  - functional groups 251
  - modified 302
- centrifugation 186
- cephalexine 13
  - synthesis 85
- cephalosporin C 140, 273, 381 ff., 385 ff.
  - chromatographic separation procedure 384
  - conversion 385
  - hydrolysis 273, 383
- cephalosporinases 91 f.
  - homology 92
- cephalosporins 271 ff.
  - chemical production 382
  - enzymatic production 382
  - hydrolysis 271 ff.
  - synthesis 271 ff., 381 ff.
- channeling 393
- chaotropic solvents 191
  - guanadinium hydrochloride 192
  - urea hydrochloride 192
- chaperones 32, 179
- charge density 349
- cheese 6
  - manufacturing 211
- chemical oxygen demand (COD) 311
- chemoenzymatic synthesis of
  - (R)-(+)-lipoc acid 125
  - (-)-sarkomycin 125
- chinese hamster ovary (CHO) 302
- chiral compounds 112
- chitosan 293 ff.
  - structure 294
- chloroperoxidase 126
  - *Caldariomyces fumago* 126
  - stereoselective oxidation 126
- chromatographic adsorbents 188
  - anion-exchange 188
  - bifunctional 188
  - biospecific 188
  - hydrophobic 188
  - metal-affinity 188
  - multimode 188
  - size-exclusion 188
- chromatographic separation 188
- chromatography 186 ff.
  - bifunctional 187
  - ion-exchange 187
  - multimode 187
- chrysanthemic acid 137
- chymosin 211
- chymotrypsin 174
- $\alpha$ -chymotrypsin 35 ff., 51 f., 76, 140, 352, 360
  - bound organic molecules 76
  - stereoselectivity 52
- circulation flow in stirred-tank reactors 398
- circulation time 398
- clarification 186
- coenzyme, *see* cofactor
- coenzyme-dependent reactions 227
- cofactor 178, 187, 283 ff.
  - FAD 178 Ca<sup>2+</sup> 178
  - NADPH 118
  - regeneration 112, 118, 229, 283, 326
  - Zn<sup>2+</sup> 178
