

CONTENTS

Foreword	xiii
Preface	xv
Contributors	xvii
1 Introduction	1
1.1 Previous Literature Which Covers MDLC	4
1.2 How this Book is Organized	5
References	6
PART I THEORY	9
2 Elements of the Theory of Multidimensional Liquid Chromatography	11
2.1 Introduction	11
2.2 Peak Capacity	13
2.3 Resolution	17
2.4 Orthogonality	19
2.5 Two-Dimensional Theory of Peak Overlap	21
2.6 Dimensionality, Peak Ordering, and Clustering	23
2.7 Theory of Zone Sampling	24
2.8 Dilution and Limit of Detection	26
2.9 Chemometric Analysis	27

2.10	Future Directions	28
	References	30
3	Peak Capacity in Two-Dimensional Liquid Chromatography	35
3.1	Introduction	35
3.2	Theory	37
3.3	Procedures	41
3.4	Results and Discussion	42
3.5	Conclusions	49
	Appendix 3A Generation of Random Correlated Coordinates	50
	Appendix 3B Derivation of Limiting Correlation Coefficient r	54
	References	56
4	Decoding Complex 2D Separations	59
4.1	Introduction	59
4.2	Fundamentals: The Statistical Description of Complex Multicomponent Separations	62
4.3	Decoding 1D and 2D Multicomponent Separations by Using the SMO Poisson Statistics	68
4.4	Decoding Multicomponent Separations by the Autocovariance Function	74
4.5	Application to 2D Separations	78
4.5.1	Results from SMO Method	81
4.5.2	Results from 2D Autocovariance Function Method	84
4.6	Concluding Remarks	88
	Acknowledgments	88
	References	88
PART II	COLUMNS, INSTRUMENTATION AND METHODS DEVELOPMENT	91
5	Instrumentation for Comprehensive Multidimensional Liquid Chromatography	93
5.1	Introduction	93
5.2	Heart-Cutting Versus Comprehensive Mode	95
5.3	Chromatographic Hardware	97
5.3.1	Valves	97
5.4	CE Interfaces	104
5.4.1	Gated Interface for HPLC–CE	104
5.4.2	Microfluidic Valves for On-Chip Multidimensional Analysis	105

5.5	Columns and Combinations	106
5.5.1	Column Systems, Dilution, and Splitting	108
5.6	Detection	109
5.7	Computer Hardware and Software	109
5.7.1	Software Development	110
5.7.2	Valve Sequencing	111
5.7.3	Data Format and Storage	113
5.8	Zone Visualization	115
5.8.1	Contour Visualization	115
5.8.2	2D Peak Presentation	117
5.8.3	Zone Visualization in Specific Chemical (pI) Regions	117
5.8.4	External Plotting Programs	117
5.8.5	Difference Plots	118
5.8.6	Multi-channel Data	118
5.9	Data Analysis and Signal Processing	119
5.10	Future Prospects	120
	References	121
6	Method Development in Comprehensive Multidimensional Liquid Chromatography	127
6.1	Introduction	127
6.2	Previous Work	128
6.3	Column Variables	130
6.4	Method Development	130
6.4.1	The Cardinal Rules of 2DLC Method Development	132
6.5	Planning the Experiment	143
6.6	General Comments on Optimizing the 2DLC Experiment: Speed–Resolution Trade-off	143
	Acknowledgment	144
	References	144
7	Monolithic Columns and Their 2D-HPLC Applications	147
7.1	Introduction	147
7.2	Monolithic Polymer Columns	148
7.2.1	Structural Properties of Polymer Monoliths	148
7.2.2	Chromatographic Properties of Polymer Monolithic Columns	150
7.2.3	Two-Dimensional HPLC Using Polymer Monoliths	152
7.3	Monolithic Silica Columns	153
7.3.1	Preparation	154
7.3.2	Structural Properties of Monolithic Silica Columns	154
7.3.3	Chromatographic Properties of Monolithic Silica Columns	156

7.4	Peak Capacity Increase by Using Monolithic Silica Columns in Gradient Elution	158
7.5	2D HPLC Using Monolithic Silica Columns	159
7.5.1	RP-RP 2D HPLC Using Two Different Columns	161
7.5.2	RP-RP 2D HPLC Using Two Similar Columns	164
7.5.3	Ion Exchange-Reversed-Phase 2D HPLC Using a Monolithic Column for the 2nd-D	166
7.5.4	IEX-RP 2D HPLC Using a Monolithic RP Capillary Column for the 2nd-D	168
7.6	Summary and Future Improvement of 2D HPLC	171
	References	171
8	Ultrahigh Pressure Multidimensional Liquid Chromatography	177
8.1	Background: MDLC in the Jorgenson Lab	177
8.1.1	Cation Exchange-Size Exclusion	178
8.1.2	Anion Exchange-Reversed Phase	180
8.1.3	Cation Exchange-Reversed Phase	181
8.1.4	Size Exclusion-Reversed Phase	183
8.2	Online Versus Off-Line MDLC	188
8.3	MDLC Using Ultrahigh Pressure Liquid Chromatography: Benefits and Challenges	189
8.3.1	An Introduction to UHPLC	190
8.3.2	UHPLC for LC \times LC: High Speed Versus High Peak Capacity	191
8.3.3	LC \times UHPLC for Separations of Intact Proteins	191
8.4	Experimental Details	193
8.4.1	Instrumentation	193
8.4.2	Data Analysis	194
8.4.3	Chromatographic Conditions	195
8.4.4	Samples	196
8.5	Results and Discussion	196
8.6	Future Directions for UHP-MDLC	202
	References	203
PART III	LIFE SCIENCE APPLICATIONS	205
9	Peptidomics	207
9.1	State of the Art—Why Peptidomics?	207
9.2	Strategies and Solutions	208
9.3	Summary and Conclusions	218
	References	218

10	A Two-Dimensional Liquid Mass Mapping Technique for Biomarker Discovery	221
10.1	Introduction	221
10.2	Methods for Separating and Identifying Proteins	223
10.2.1	pI-Based Methods of Separation	223
10.2.2	Chromatofocusing-A Column Based pH Separation	225
10.2.3	Nonporous Separation of Proteins	226
10.2.4	Electrospray-Time of Flight-Mass Spectrometry	228
10.2.5	MALDI Peptide Mass Fingerprinting	229
10.2.6	Data Analysis and Recombination	230
10.3	Applications	230
10.3.1	Proteomic Mapping and Clustering of Multiple Samples—Application to Ovarian Cancer Cell Lines	230
10.3.2	2D Liquid Mass Mapping of Tumor Cell Line Secreted Samples, Application to Metastasis-Associated Protein Profiles	233
10.3.3	Identification Annotation and Data Correlation in MCF10 Human Breast Cancer Cell Lines	235
10.4	Summary and Conclusions	237
	Acknowledgments	238
	References	238
11	Coupled Multidimensional Chromatography and Tandem Mass Spectrometry Systems for Complex Peptide Mixture Analysis	243
11.1	SCX-RP/MS/MS	245
11.2	SCX/RP/MS/MS	248
11.3	MudPIT	251
11.4	Alternative First Dimension Approaches	254
11.5	Conclusion	255
	References	255
12	Development of Orthogonal 2DLC Methods for Separation of Peptides	261
12.1	Introduction	261
12.2	Previous Work	263
12.3	Developing Orthogonal 2DLC Methods	264
12.3.1	LC Selectivity for Peptides: Experimental Design	264
12.3.2	Investigation of 2DLC Orthogonality for Separation of Peptides	266
12.3.3	Geometric Approach to Orthogonality in 2DLC	271
12.3.4	Practical 2DLC Considerations in Proteome Research	275
12.3.5	Evaluation of Selected 2DLC MS/MS Systems	276

12.3.6	Peak Capacity in 2DLC-MS/MS	280
12.3.7	Considerations of Concentration Dynamic Range	282
12.4	Conclusions	284
	Acknowledgment	284
	References	284
13	Multidimensional Separation of Proteins with Online Electrospray Time-of-Flight Mass Spectrometric Detection	291
13.1	Introduction	291
13.2	Chromatographic Parameters	293
13.3	Analyte Detection and Subsequent Analysis	293
13.4	Building a Multidimensional Protein Separation	294
13.4.1	Selection of an Ion-Exchange–Reversed-Phase Separation System for Protein-Level Separations	295
13.4.2	Chromatographic Sorbent Considerations	295
13.4.3	Chromatographic Behavior of Proteins	296
13.5	Comprehensive Multidimensional Chromatographic Systems	296
13.6	Coupling 2DLC with Online ESI–MS Detection	299
13.6.1	Interactions between the Two Dimensions of Chromatography (Step Vs. Linear)	304
13.6.2	Recognizing Increased Selectivity in 2DLC Separations	306
13.7	Expanding Multidimensional Separations into a “Middle-Out” Approach to Proteomic Analysis	308
13.8	Future Directions in Protein MDLC	311
13.8.1	Protein Chromatography	312
13.8.2	MS Analysis of Proteins	313
13.8.3	Data Interpretation	314
13.9	Conclusion	314
	References	315
14	Analysis of Enantiomeric Compounds Using Multidimensional Liquid Chromatography	319
14.1	Online Achiral-Chiral LC-LC	320
14.2	Applications	323
14.2.1	Analysis of Enantiomers in Plasma and Urine	323
14.3	Amino Acids	328
14.3.1	Physiological Fluids or Tissues	328
14.3.2	In Food, Beverages, and Other Products	333
14.4	Other Applications	334
14.4.1	Analysis of Enantiomers from Plant and Environmental Sources	334
14.5	Miscellaneous Applications	336
14.6	Conclusion	338
	References	339

PART IV MULTIDIMENSIONAL SEPARATION USING CAPILLARY ELECTROPHORESIS	345
15 Two-Dimensional Capillary Electrophoresis for the Comprehensive Analysis of Complex Protein Mixtures	347
15.1 Introduction	347
15.2 Previous Work	348
15.2.1 Miniaturized IEF/SDS-PAGE	348
15.2.2 One-Dimensional Capillary Electrophoresis for Protein Analysis	349
15.3 Two-Dimensional Capillary Separations for Analysis of Peptides and Proteins	352
15.3.1 Capillary Liquid Chromatography Coupled with Capillary Electrophoresis for Analysis of Unlabeled Peptides and Proteins	352
15.3.2 Two-Dimensional Capillary Electrophoresis for Analysis of Proteins	352
15.3.3 High-Speed Two-Dimensional Capillary Electrophoresis	356
15.3.4 The Analysis of a Single Fixed Cell	358
15.4 Conclusions	360
15.5 Abbreviations	360
References	360
16 Two-Dimensional HPLC–CE Methods for Protein/Peptide Separation	365
16.1 Introduction	365
16.2 Off-line Versus Online	366
16.3 HPLC Fractionation	366
16.4 2D HPLC–CE	367
16.5 CE–MS Detection	368
16.6 Applications	370
16.7 Concluding Remarks	380
Acknowledgment	381
References	381
PART V INDUSTRIAL APPLICATIONS	385
17 Multidimensional Liquid Chromatography in Industrial Applications	387
17.1 Introduction	387
17.2 Principles of Multidimensional Liquid Chromatography as Applied to Polymer Analysis	390

17.3	Experimental	393
17.4	Analysis of Alkylene Oxide-Based Polymers	395
17.4.1	Amphiphilic Polyalkylene Oxides	395
17.5	Excipients	399
17.6	Polyether Polyols	403
17.7	Analysis of Condensation Polymers	406
17.8	Polyamides	407
17.9	Aromatic Polyesters	414
17.10	Aliphatic Polyesters	417
	References	420
18	The Analysis of Surfactants by Multidimensional Liquid Chromatography	425
18.1	Introduction	425
18.2	Analytical Characterization Methods	428
18.2.1	CE and CGE	429
18.2.2	SEC	430
18.2.3	NPLC	431
18.2.4	RPLC	433
18.3	Detection Methods	434
18.4	2DLC	434
18.4.1	RPLC Coupled to SEC	435
18.4.2	NPLC Coupled to RPLC	435
18.5	Conclusions	442
	References	443
	Index	447
