

Contents

Acknowledgments	xii
Foreword	xvii
Introduction	xix
1	
Chaos in Manufacturing 1	
Problems in Manufacturing	3
Symptoms of Master Scheduling Problems	3
The Inaccurate Forecast	4
And the Solutions	7
The Case of the Overloaded Master Schedule	12
Getting Out of the Overloaded Master Schedule	17
2	
Why Master Scheduling? 23	
Between Strategy and Execution	25
What Is the Master Schedule?	29
Maximizing, Minimizing, and Optimizing	30
The Challenge for the Master Scheduler	31
MPS, MRPII, ERP, and SCM	33
Enterprise Resource Planning	39
Supply Chain Management	41
Where Have All the Orders Gone?	42
The Four Cornerstones of Manufacturing Revisited	45
So, Why Master Scheduling?	46

3

The Mechanics of Master Scheduling 49

The Master Schedule Matrix	50
Master Scheduling in Action	57
How Master Scheduling Drives Material Planning	63
The What, Why, and How of Safety Stock	71
Planning Time Fence	75
Demand Time Fence	80
Master Schedule Design Criteria	82

4

Managing with the Master Schedule 85

The Master Scheduler's Job	88
Moving a Customer Order to an Earlier Date	90
Action and Exception Messages	93
Six Key Questions to Answer	97
Answering the Six Questions	100
Time Zones as Aids to Decision Making	101
Moving a Manufacturing Order to an Earlier Date	103
Planning Within Policy	106
No Past Dues	109
Managing with Planning Time Fences	109
Load-Leveling in Manufacturing	115
Lean Manufacturing and Continuous Improvement	118
Mixed-Model Scheduling	119
Planned Plant Shutdowns	123
The Production Shutdown	125

5

Using the MPS Output in a Make-to-Stock Environment 129

The Master Schedule Screen	130
Working a Make-to-Stock Master Schedule	137
Time Phasing the Bill-of-Material	140
Understanding the Action Messages	142

Bridging Data and Judgment	149
Seasonality and Inventory Buildup	151
The Six Key Questions Revisited	154
Scheduling in a World of Many Schedules	154
From Master Scheduling to Material Requirements Planning	164

6

What to Master Schedule 171

Manufacturing Strategies	172
Choosing the Right Strategy	174
Master Scheduling and Product Structures	177
Multilevel Master Scheduling	180
Tying the Master Schedule and the Production Plan Together	182
Master Scheduling Capacities, Activities, and Events	184

7

Scheduling in a Flow Environment 186

Different Manufacturing Environments	188
Similarities between Intermittent and Flow Environments	191
Product Definition	196
The Planning Process	200
An Extended Example	206
Catalysts and Recovered Material	211
Line Scheduling	213

8

Planning Bills 216

The Overly Complex Bill-of-Material	218
Anatomy of a Planning Bill	227
Creating Demand at the Master Schedule Level	232
Restructuring Company Bills into Planning Bills: A Case Study	233

9

Two-Level MPS and Other Advanced Techniques 240

The Backlog Curve	240
Scheduling and the Backlog Curve Zones	244

Identifying Demand	244
Creating the Master Schedule in a Make-to-Order Environment	251
Option Overplanning	255
Calculating Projected Available Balance	258
Calculating Available-to-Promise	259
Using ATP to Commit Customer Orders	260
Option Overplanning in the Make-to-Stock Environment	267
Master Scheduling in Make-to-Order and Make-to-Stock Environments: A Comparison	271

10

Using MPS Output in a Make-to-Order Environment 274

Using Planning Bills to Simplify Option Scheduling	276
The Scheduling Process	278
The Common-Items Master Schedule	282
Analyzing the Detail Data	287
Balancing the Sold-Out Zone for Common Items	288
Handling Abnormal Demand	290
Action Messages	292
Working the Pseudo Options	293
Master Scheduling a Purchased Item in the Planning Bill	304
Linking Master Schedule and Material Plan	310

11

Master Scheduling in Custom-Product Environments 315

The Unique Challenges of the ETO Environment	316
The Case of New-Product Introductions	318
Master Scheduling Activities and Events	320
Launching a New Product	321
Prices and Promises to Keep	326
What Can Go Wrong	327
Integrating Design and Operation Activities	328
Plan Down, Replan Up	332
Capacity-Driven Environments	336
Make-to-Contract Environments	341
The Need for Standards	342
When Supply Can't Satisfy Demand	346

12

Finishing Schedules 348

Manufacturing Strategy and Finishing Schedules	349
Manufacturing Approaches	350
Other Manufacturing Issues	353
Sequencing	354
Traditional Means of Communicating the Schedule	355
Do We Really Need These Computers?	356
The Kanban System	357
Tying It All Together	361
Final Assembly or Process Routings	365
Configuring and Building to a Customer Order	367
Finishing or Final Assembly Combined Materials and Operations List	370
Choosing the Most Effective Approach	372
Finishing Schedules versus Master Schedules	373

13

Sales and Operations Planning 375

Workable, Adjustable Plans	378
S&OP and the Master Schedule	380
The Case of S&OP at AutoTek	381
Synchronizing Demand and Supply	394

14

Rough Cut Capacity Planning 400

Know Before You Go	401
Rough Cut Revealed	402
The Rough Cut Process	403
Creating Resource Profiles	406
Finalizing the Resource Profile	412
Capacity Inputs	413
Overloading Demonstrated Capacity	419
Rough Cut at the Master Scheduling Level	421
Working the Rough Cut Capacity Plan	428
What-If Analysis and Rough Cut Capacity Planning	433

Screen and Report Formats	435
The Limitations and Benefits of Rough Cut Capacity Planning	438
Implementing the Rough Cut Process	440
Final Thoughts	442

15

Supply Management 445

Supply Management in Action	450
Product-Driven, Aggregated Inventory Planning	452
Will the Plan Work?	456
Product-Driven, Disaggregated Inventory Planning	458
Product-Driven, Aggregated Backlog Planning	462
Product-Driven, Disaggregated Backlog Planning	467
Production-Driven Environments	471
Interplant Integration	473
Should Companies Have Supply Managers?	478

16

Demand Management 482

What Is Demand Management?	482
The Role of Forecasting in the Company: The Case of Hastings & Brown	485
Problems with Forecasting	488
Coping with Forecast Inaccuracies	488
It's about Quantities	489
It's about Time	491
Small Numbers and the Master Schedule	494
Demand and Forecast Adjustment	495
Computer Alert	499
The Problem of Abnormal Demand	502
Customer Linking	504
Getting Pipeline Control	507
Distribution Resource/Requirements Planning	509
Multiplant Communications	516
Tell Us What You Want, and We'll Do the Rest, Sir	518

Available-to-Promise	519
ATP with Two Demand Streams	522
Should Companies Have Demand Managers?	526

17

Effective Implementation 531

Proven Path to Successful Operational Excellence	532
The Decision Point	534
Going on the Air	535
The Path to Master Scheduling Implementation	536
Stage 1: Evaluation and Preparation	538
Master Scheduling Vision Statement (A Sample)	541
Stage 2: Design and Action	546
Business Meeting Agenda (A Sample)	548
Master Scheduling Policy (A Sample)	553
Master Schedule Procedure Action Message Review (A Sample)	554
Stage 3: Launch and Cutover	557
Who's in Control of the Software?	558
Deterrents to Successful Implementation of the Master Scheduling Process	565
The Master Scheduler's List of Responsibilities	566
Master Scheduler Position Description	567

Epilogue

Order from Chaos 570

Appendix A Class A Master Scheduling Process and Performance Checklists	573
---	-----

Appendix B Master Scheduling Sample Implementation Task List	581
--	-----

Appendix C Master Scheduling Policy, Procedure, and Flow Diagram Listing	593
--	-----

Appendix D Master Scheduling Sample Process Flow Diagram	596
--	-----

Glossary	598
----------	-----

Index	637
-------	-----
