---

### A

action, 2, 14, 530  
addition, 412, 474, 475, 478, 481, 484  
agreement, 415–416  
    communication fault, 469  
    consensus, 416  
    from Boolean to general, 438  
    majority, 469  
    unanimity, 416  
arbitrary graph  
    Byzantine agreement, 440  
    election, 185  
    lower bound, 209  
ask your neighbours (Strategy), 53  
asynchronous-to-synchronous transform,  
    357

### B

behaviour, 2  
    homogeneous, 3  
bidirectional links, 8  
bit complexity, 129  
bivalent configuration, 420  
breadth-first spanning-tree, 240–249  
broadcast, 10, 17, 29–35, 225  
    fault tolerant, 415, 462, 476, 485  
    mesh, 217  
    by traversal, 51  
    complete graph, 35  
    hypercube, 32  
    tree, 32  
    with termination detection, 88  
broadcast tree, 61  
butterfly  
    election, 221  
    interval routing, 273

Byzantine fault, 412, 430–443  
    impossibility of consensus, 435  
    ubiquitous, 475

### C

cardinal statistics, 77  
causal order, 543–547  
causal time, 10  
cellular automata, 391  
center finding, 81  
chordal ring  
    election, 183, 221  
clocks  
    synchronized, 333–406  
common knowledge, 416, 460  
communication center, 280  
communication delays  
    bounded, 9, 333, 424  
    finite (Axiom), 5  
    general, 5  
    unitary, 9, 335  
communication fault, 412,  
    467–485  
communicator, 342–352  
    2-bit, 340, 345, 359  
    3-bit, 346  
    bit pattern, 352  
    corruption tolerant, 351  
    lower bound, 352  
    monotonically increasing, 394  
    optimal, 347  
    size, 352  
compact routing, 261  
    interval, 262  
complete causal order, 544

complete graph  
 broadcast, 35  
 consensus, 430  
 election, 174  
   lower bound, 178  
   sense of direction, 180  
 fault tolerant election, 457, 463  
 fault-tolerant broadcast, 462  
 mutual exclusion, 561  
 sorting, 303, 308, 312  
 traversal, 50  
 wake-up, 38, 386  
 wake-up with ID, 38  
 component failure, 409–412  
   link crash, 253  
   single fault disaster, 417  
   single link crash, 255  
 computational equivalence, 60  
 configuration, 17, 419  
 connectivity  
   edge, 413  
   node, 413  
   strongly connected component, 503  
 consensus, 416  
   fault detection, 449–454  
   impossibility, 417, 435, 458  
   partial reliability, 455–457  
   randomized, 443–449  
   synchronous, 426–443  
   two generals, 458  
 consistent cut, 530  
 continuous computation, 541  
 convergecast, 86  
 correctness, 18  
 corruption, 348, 412, 474, 475, 480, 484  
 coterie, 562  
 count-to-infinity, 254  
 crash, 411, 426, 444  
   impossibility of consensus, 417  
   link, 253  
 critical operation, 550  
 cube connected cycle  
   Byzantine agreement, 443  
   election, 221  
   interval routing, 273  
 cycle detection, 502

**D**

deadlock, 500–517, 566–568  
   AND requests systems, 506
