<i>Preface: The Only Intelligent Planet</i>	xiii
Introduction: One in a Trillion	I
Across the Milky Way; Hot jupiters; Planets in profusion; Dusty beginnings; Cosmic chemistry; The life of Gaia; Searching for other Gaias	
1. Two Paradoxes and an Equation	26
The cosmic lottery and the Drake equation; The inspection paradox and the Copernican principle; Panspermia and the Fermi paradox; Probing for an answer	
2. What's So Special about Our Place in the Milky Way?	55
Making galaxies; Making metals; Mixing metals in the Milky Way; Our place in the Milky Way; The Galactic Habitable Zone; Catastrophic comets	
3. What's So Special about the Sun?	80
The narrow zone of life; The Sun is not an average star; Perturbing partners; Blasts from the past; The mystery of solar metallicity; Until the Sun dies; Postponing Doomsday	
4. What's So Special about the Solar System?	100
Too hot to handle; The geography of the Solar System; Making planets; Making the Solar System; Making the Earth; The special one	
5. What's So Special about the Earth?	126
Like a diamond in the sky; A planetary jigsaw puzzle; Creating continents; A field of force; Venus and Mars; A planetary stabilizer; Plate tectonics and life	

CONTENTS

6. What's So Special about the Cambrian Explosion?	151
I. Contingency and Convergence	
The Cambrian explosion; The Burgess Shale; Contingency; Convergence; The third way	
7. What's So Special about the Cambrian Explosion?	167
II. Hothouse Venus/Snowball Earth	
After the deep freeze; Tipping the balance; From without or within?; The archetypal impact; Cosmic clouds and comet dust; Diamond dust and a facelift for a goddess	
8. What's So Special about Us?	184
Chance, necessity and the decimal system; The molecular clock; The trigger for change; The pacemaker of human evolution; The fate of technological civilization; The fate of the Earth; No second chance
