About the Contributors	xiii
Preface to the Second Edition	xv
Preface to the First Edition	xvii
Introduction	xxi
1 Particle Size Analysis	1
1.1 Introduction	1
1.2 Describing the Size of a Single Particle	1
1.3 Description of Populations of Particles	4
1.4 Conversion Between Distributions	5
1.5 Describing the Population by a Single Number	7
1.6 Equivalence of Means	10
1.7 Common Methods of Displaying Size Distributions	11
1.7.1 Arithmetic-normal Distribution	11
1.7.2 Log-normal Distribution	11
1.8 Methods of Particle Size Measurement	12
1.8.1 Sieving	12
1.8.2 Microscopy	13
1.8.3 Sedimentation	13
1.8.4 Permeametry	15
1.8.5 Electrozone Sensing	15
1.8.6 Laser Diffraction	16
1.9 Sampling	16
1.10 Worked Examples	17
Test Yourself	25
Exercises	25
2 Single Particles in a Fluid	29
2.1 Motion of Solid Particles in a Fluid	29
2.2 Particles Falling Under Gravity Through a Fluid	31
2.3 Non-Spherical Particles	33
2.4 Effect of Boundaries on Terminal Velocity	34
2.5 Further Reading	35
2.6 Worked Examples	35
Test Yourself	44
Exercises	46

3	Multiple Particle Systems	51
3.1	Settling of a Suspension of Particles	51
3.2	Batch Settling	53
3.2.1	Settling Flux as a Function of Suspension Concentration	53
3.2.2	Sharp Interfaces in Sedimentation	54
3.2.3	The Batch Settling Test	56
3.2.4	Relationship Between the Height–Time Curve and the Flux Plot	59
3.3	Continuous Settling	61
3.3.1	Settling of a Suspension in a Flowing Fluid	61
3.3.2	A Real Thickener (with Upflow and Downflow Sections)	63
3.3.3	Critically Loaded Thickener	64
3.3.4	Underloaded Thickener	65
3.3.5	Overloaded Thickener	65
3.3.6	Alternative Form of Total Flux Plot	66
3.4	Worked Examples	68
	Test Yourself	79
	Exercises	81
4	Slurry Transport	91
4.1	Introduction	91
4.2	Flow Condition	91
4.3	Rheological Models For Homogeneous Slurries	93
4.3.1	Non-Newtonian Power-law Models	94
4.3.2	Pressure Drop Prediction for Slurries Exhibiting Power-law Rheology	96
4.3.3	Non-Newtonian Yield Stress Models	99
4.3.4	Pressure Drop Prediction for Slurries Exhibiting Bingham Plastic Rheology	101
4.4	Heterogeneous Slurries	103
4.4.1	Critical Deposition Velocity	104
4.5	Components of a Slurry Flow System	104
4.5.1	Slurry Preparation	104
4.5.2	Pumps	105
4.5.3	Pipeline	108
4.5.4	Slurry De-watering	108
4.6	Further Reading	109
4.7	Worked Examples	109
	Test Yourself	114
	Exercises	114
5	Colloids and Fine Particles	117
5.1	Introduction	117
5.2	Brownian Motion	118
5.3	Surface Forces	120
5.3.1	van der Waals Forces	121
5.3.2	Electrical Double Layer Forces	124

5.3.3	Adsorbing Polymers, Bridging and Steric Forces	127
5.3.4	Other Forces	128
5.3.5	Net Interaction Force	129
5.4	Result of Surface Forces on Behaviour in Air and Water	130
5.5	Influences of Particle Size and Surface Forces on Solid/Liquid Separation by Sedimentation	132
5.5.1	Sedimentation Rate	132
5.5.2	Sediment Concentration and Consolidation	133
5.6	Suspension Rheology	134
5.7	Influence of Surface Forces on Suspension Flow	139
5.7.1	Repulsive Forces	139
5.7.2	Attractive Forces	140
5.8	Nanoparticles	144
5.9	Worked Examples	145
	Test Yourself	149
	Exercises	150
6	Fluid Flow Through a Packed Bed of Particles	153
6.1	Pressure Drop – Flow Relationship	153
6.1.1	Laminar Flow	153
6.1.2	Turbulent Flow	155
6.1.3	General Equation for Turbulent and Laminar Flow	155
6.1.4	Non-spherical Particles	156
6.2	Filtration	157
6.2.1	Introduction	157
6.2.2	Incompressible Cake	157
6.2.3	Including the Resistance of the Filter Medium	159
6.2.4	Washing the Cake	159
6.2.5	Compressible Cake	160
6.3	Further Reading	161
6.4	Worked Examples	161
	Test Yourself	165
	Exercises	165
7	Fluidization	169
7.1	Fundamentals	169
7.2	Relevant Powder and Particle Properties	172
7.3	Bubbling and Non-Bubbling Fluidization	173
7.4	Classification of Powders	174
7.5	Expansion of a Fluidized Bed	178
7.5.1	Non-bubbling Fluidization	178
7.5.2	Bubbling Fluidization	180
7.6	Entrainment	182
7.7	Heat Transfer in Fluidized Beds	186
7.7.1	Gas – Particle Heat Transfer	186
7.7.2	Bed – Surface Heat Transfer	188

7.8	Applications of Fluidized Beds	191
7.8.1	Physical Processes	191
7.8.2	Chemical Processes	191
7.9	A Simple Model for the Bubbling Fluidized Bed Reactor	194
7.10	Some Practical Considerations	198
7.10.1	Gas Distributor	198
7.10.2	Loss of Fluidizing Gas	198
7.10.3	Erosion	199
7.10.4	Loss of Fines	199
7.10.5	Cyclones	199
7.10.6	Solids Feeders	199
7.11	Worked Examples	199
	Test Yourself	205
	Exercises	206
8	Pneumatic Transport and Standpipes	211
8.1	Pneumatic Transport	211
8.1.1	Dilute Phase and Dense Phase Transport	212
8.1.2	The Choking Velocity in Vertical Transport	212
8.1.3	The Saltation Velocity in Horizontal Transport	214
8.1.4	Fundamentals	215
8.1.5	Design for Dilute Phase Transport	219
8.1.6	Dense Phase Transport	224
8.1.7	Matching the System to the Powder	230
8.2	Standpipes	231
8.2.1	Standpipes in Packed Bed Flow	231
8.2.2	Standpipes in Fluidized Bed Flow	232
8.2.3	Pressure Balance During Standpipe Operation	235
8.3	Further Reading	237
8.4	Worked Examples	237
	Test Yourself	243
	Exercises	244
9	Separation of Particles from a Gas: Gas Cyclones	247
9.1	Gas Cyclones – Description	248
9.2	Flow Characteristics	249
9.3	Efficiency of Separation	249
9.3.1	Total Efficiency and Grade Efficiency	249
9.3.2	Simple Theoretical Analysis for the Gas Cyclone Separator	250
9.3.3	Cyclone Grade Efficiency in Practice	252
9.4	Scale-up of Cyclones	253
9.5	Range of Operation	255
9.6	Some Practical Design and Operation Details	257
9.6.1	Effect of Dust Loading on Efficiency	257
9.6.2	Cyclone Types	257
9.6.3	Abrasion	257

9.6.4	Attrition of Solids	258
9.6.5	Blockages	258
9.6.6	Discharge Hoppers and Diplegs	258
9.6.7	Cyclones in Series	259
9.6.8	Cyclones in Parallel	259
9.7	Worked Examples	259
	Test Yourself	262
	Exercises	263
10	Storage and Flow of Powders – Hopper Design	265
10.1	Introduction	265
10.2	Mass Flow and Core Flow	265
10.3	The Design Philosophy	268
10.3.1	Flow–No Flow Criterion	268
10.3.2	The Hopper Flow Factor, ff	269
10.3.3	Unconfined Yield Stress, σ_y	269
10.3.4	Powder Flow Function	269
10.3.5	Critical Conditions for Flow	270
10.3.6	Critical Outlet Dimension	270
10.3.7	Summary	271
10.4	Shear Cell Test	272
10.5	Analysis of Shear Cell Test Results	274
10.5.1	Mohr’s Circle—in Brief	274
10.5.2	Application of Mohr’s Circle to Analysis of the Yield Locus	274
10.5.3	Determination of σ_y and σ_c	275
10.5.4	Determination of δ from Shear Cell Tests	276
10.5.5	The Kinematic Angle of Friction between Powder and Hopper Wall, Φ_w	276
10.5.6	Determination of the Hopper Flow Factor, ff	277
10.6	Summary of Design Procedure	278
10.7	Discharge Aids	281
10.8	Pressure on the Base of a Tall Cylindrical Bin	281
10.9	Mass Flow Rates	284
10.10	Conclusions	285
10.11	Worked Examples	285
	Test Yourself	289
	Exercises	289
11	Mixing and Segregation	293
11.1	Introduction	293
11.2	Types of Mixture	293
11.3	Segregation	294
11.3.1	Causes and Consequences of Segregation	294
11.3.2	Mechanisms of Segregation	295
11.4	Reduction of Segregation	298
11.5	Equipment for Particulate Mixing	299

11.5.1	Mechanisms of Mixing	299
11.5.2	Types of Mixer	300
11.6	Assessing the Mixture	301
11.6.1	Quality of a Mixture	301
11.6.2	Sampling	302
11.6.3	Statistics Relevant to Mixing	302
11.7	Worked Examples	305
	Test Yourself	309
	Exercises	309
12	Particle Size Reduction	311
12.1	Introduction	311
12.2	Particle Fracture Mechanisms	312
12.3	Model Predicting Energy Requirement and Product Size Distribution	314
12.3.1	Energy Requirement	314
12.3.2	Prediction of the Product Size Distribution	318
12.4	Types of Comminution Equipment	320
12.4.1	Factors Affecting Choice of Machine	320
12.4.2	Stressing Mechanisms	320
12.4.3	Particle Size	326
12.4.4	Material Properties	327
12.4.5	Carrier Medium	328
12.4.6	Mode of Operation	328
12.4.7	Combination with other Operations	328
12.4.8	Types of Milling Circuit	328
12.5	Worked Examples	329
	Test Yourself	332
	Exercises	333
13	Size Enlargement	337
13.1	Introduction	337
13.2	Interparticle Forces	338
13.2.1	van der Waals Forces	338
13.2.2	Forces due to Adsorbed Liquid Layers	338
13.2.3	Forces due to Liquid Bridges	338
13.2.4	Electrostatic Forces	340
13.2.5	Solid Bridges	340
13.2.6	Comparison and Interaction between Forces	340
13.3	Granulation	341
13.3.1	Introduction	341
13.3.2	Granulation Rate Processes	342
13.3.3	Simulation of the Granulation Process	349
13.3.4	Granulation Equipment	352
13.4	Worked Examples	355
	Test Yourself	357
	Exercises	357

14	Health Effects of Fine Powders	359
14.1	Introduction	359
14.2	The Human Respiratory System	359
14.2.1	Operation	359
14.2.2	Dimensions and Flows	361
14.3	Interaction of Fine Powders with the Respiratory System	362
14.3.1	Sedimentation	362
14.3.2	Inertial Impaction	363
14.3.3	Diffusion	364
14.3.4	Interception	364
14.3.5	Electrostatic Precipitation	364
14.3.6	Relative Importance of These Mechanisms Within the Respiratory Tract	364
14.4	Pulmonary Delivery of Drugs	367
14.5	Harmful Effects of Fine Powders	369
	Test Yourself	371
	Exercises	371
15	Fire and Explosion Hazards of Fine Powders	373
15.1	Introduction	373
15.2	Combustion Fundamentals	374
15.2.1	Flames	374
15.2.2	Explosions and Detonations	374
15.2.3	Ignition, Ignition Energy, Ignition Temperature – a Simple Analysis	374
15.2.4	Flammability Limits	377
15.3	Combustion in Dust Clouds	378
15.3.1	Fundamentals Specific to Dust Cloud Explosions	378
15.3.2	Characteristics of Dust Explosions	379
15.3.3	Apparatus for Determination of Dust Explosion Characteristics	380
15.3.4	Application of the Test Results	382
15.4	Control of the Hazard	383
15.4.1	Introduction	383
15.4.2	Ignition Sources	384
15.4.3	Venting	384
15.4.4	Suppression	385
15.4.5	Inerting	386
15.4.6	Minimize Dust Cloud Formation	386
15.4.7	Containment	386
15.5	Worked Examples	386
	Test Yourself	392
	Exercises	393
16	Case Studies	395
16.1	Case Study 1	395
16.2	Case Study 2	399

16.3	Case Study 3	403
16.4	Case Study 4	404
16.5	Case Study 5	405
16.6	Case Study 6	406
16.7	Case Study 7	414
16.8	Case Study 8	420
