Preface	xi
Introduction	1
1 Fundamentals of Electromagnetics	7
1.1 RF and Microwave Frequency Ranges	7
1.2 Fields	9
1.3 Electromagnetics	10
1.3.1 Electric Field and Flux Density	10
1.3.2 Magnetic Field and Flux Density	17
1.3.3 Electromagnetic Field	22
1.3.4 Electromagnetic Wave	25
1.3.5 Antennas and Near Field	28
1.4 RF and Microwave Energy	30
1.4.1 Power and Energy	30
1.4.2 Influence of the Waveform	33
1.4.3 Blackbody Radiation	33
<i>Planck's Radiation Law</i>	34
<i>Rayleigh–Jeans Radiation Law</i>	35
<i>Stefan–Boltzmann Law</i>	38
<i>Wien Displacement Law</i>	38
<i>Wien Radiation Law</i>	39
1.5 Penetration in Biological Tissues and Skin Effect	39
1.6 Relaxation, Resonance, and Display	44
1.6.1 Relaxation in Dielectrics	44
1.6.2 Resonance Absorption	45
1.6.3 Cole–Cole Display	47

1.7	Dielectric Measurements	49
1.7.1	RF Measurements	49
1.7.2	Microwave Measurements	50
1.7.3	Liquids	51
1.7.4	Applicators	52
1.8	Exposure	53
	References	54
	Problems	55
2	RF/Microwave Interaction Mechanisms in Biological Materials	63
2.1	Bioelectricity	63
2.1.1	Fundamentals	63
2.1.2	Cells and Nerves	65
2.1.3	Bioelectric Phenomena	69
2.2	Tissue Characterization	69
2.2.1	Ionization and Nonionization	70
2.2.2	Dielectric Characterization	70
	<i>Dipolar Orientation</i>	71
	<i>Interfacial Relaxation</i>	71
	<i>Ionic Diffusion: Counterion Polarization Effects</i>	72
2.2.3	Dielectric Dispersion in Tissues	73
	<i>Conductivity</i>	74
	<i>Permittivity</i>	75
2.2.4	Measurements	75
	<i>Tissues</i>	75
	<i>Liquids</i>	77
	<i>Influence of Temperature</i>	80
2.3	Thermodynamics	82
2.4	Energy	85
	References	89
	Problems	91
3	Biological Effects	93
3.1	Absorption	93
3.1.1	Fundamentals	93
3.1.2	Dosimetry and SAR	94
3.1.3	Thermal Considerations	96
3.2	Nervous System	100
3.2.1	General Description	101
3.2.2	Effects on Brain and Spinal Cord	103

3.2.3	Blood–Brain Barrier	104
3.2.4	Influence of Parameters of Microwave Exposure	107
3.2.5	Nervous System Modeling and Simulation	110
3.3	Cells and Membranes	114
3.4	Molecular Level	116
3.5	Low-Level Exposure and ELF Components	117
3.5.1	Microwave Syndrome	117
3.5.2	Low-Level Pulsed Exposure	118
3.5.3	ELF Components	119
3.6	Ear, Eye, and Heart	120
3.7	Influence of Drugs	123
3.8	Nonthermal, Microthermal, and Isothermal Effects	124
3.8.1	Microwaves as a Trigger	125
3.8.2	Entropy	128
3.9	Epidemiology Studies	131
3.10	Interferences	132
3.11	Radiation Hazards and Exposure Standards	134
3.11.1	Standards and Recommendations	134
3.11.2	Tissue Phantoms and SAR Measurements	136
3.11.3	Computational Methods for SAR Evaluation	139
3.11.4	Exposure of Body to Cell Phone and Base Station	140
	References	142
	Problems	150
4	Thermal Therapy	153
4.1	Introduction to Thermotherapy	153
4.2	Heating Principle	153
4.2.1	Foundations of Dielectric Heating Principle	154
4.2.2	RF Dielectric Heating Applicator	157
	<i>Theory</i>	157
	<i>Actual Dielectric Heating Applicator Systems</i>	159
4.2.3	Microwave Dielectric Heating	163
4.2.4	Foundation of Inductive Heating Principle	164
4.2.5	Actual Inductive Heating Applicator	166
4.2.6	Detailed Theory of RF Dielectric Heating	174
4.2.7	Detailed Theory of Microwave Dielectric Heating	177
4.2.8	Detailed Theory of Inductive Heating	179
4.3	Hyperthermia	182
4.3.1	Biological Background of Hyperthermia	183
	<i>Survival Rate and Hyperthermia Sensitivity of Cell</i>	183
	<i>Oxygen Partial Pressure, pH, and Hyperthermia</i>	
	<i>Sensitivity of Cell</i>	184

	<i>Period and Hyperthermia Sensitivity of Biological Cell</i>	185
	<i>Hyperthermia and Combined Effect of Radiation</i>	186
4.4	Method of Thermometry	186
4.4.1	Invasive Thermometry	186
	<i>Measurement by Thermocouple Sensor</i>	186
	<i>Thermometer Using Thermistor</i>	191
	<i>Optical Fiber Thermometer</i>	195
4.4.2	Noninvasive Thermometry	197
	<i>Thermometer Using IR Photodetector</i>	197
	<i>Noninvasive Thermometry Using NMR Technique</i>	198
	References	199
	Problems	202
5	EM Wave Absorbers Protecting Biological and Medical Environment	203
5.1	Foundation of EM Wave Absorbers	203
5.2	Classification of Wave Absorbers	204
5.2.1	Classification by Constituent Material	204
5.2.2	Classification by Structural Shape	205
	<i>Classification by Number of Layers</i>	205
	<i>Classification by Appearance</i>	205
5.3	Fundamental Principle	206
5.4	Fundamental Theory of EM Wave Absorbers	210
5.4.1	Single-Layer-Type Wave Absorber	210
5.4.2	Multilayer-Type Wave Absorber	213
	<i>Normal Incident Case</i>	213
	<i>Oblique Incident Case</i>	214
5.4.3	Taper-Type Wave Absorber	215
5.5	Application of EM Absorber	216
5.5.1	Quarter-Wavelength-Type Wave Absorber	216
5.5.2	Single-Layer-Type Wave Absorber	219
5.5.3	Multilayer Wave Absorber	219
5.5.4	Pyramidal Wave Absorber	221
5.6	EM Wave Absorbers Based on Equivalent Transformation Method of Material Constant	223
5.6.1	Microwave Absorber with Multiholes	223
	<i>Matching Characteristics</i>	224
5.6.2	Weakly Magnetized Ferrite Absorber	232
5.6.3	Microwave Absorber with Surface-Printed Conductive Line Patterns	235
5.6.4	Integrated-Circuit-Type Absorber	239
5.7	Method for Improving RF Field Distribution in a Small Room	241

References	247
Problems	248
6 RF/Microwave Delivery Systems for Therapeutic Applications	250
6.1 Introduction	250
6.2 Transmission Lines and Waveguides for Medical Applications	251
6.2.1 Coaxial Cable	251
<i>Cable Specifications</i>	251
<i>Design Consideration</i>	252
<i>Power Loss</i>	252
<i>Low-Loss Fully Coaxial Cable</i>	255
<i>Skin Effect</i>	255
<i>Coaxial Cable for Microwave Balloon Angioplasty</i>	256
6.2.2 Circular Waveguide	258
<i>Fundamentals</i>	258
<i>Power Capacity of a Circular Waveguide</i>	261
6.3 Antennas	261
6.3.1 Fundamentals	261
6.3.2 Antenna Configurations	262
<i>Electric Dipole</i>	262
6.4 RF and Microwave Ablation	264
6.4.1 Fundamentals	264
6.4.2 RF Development	267
6.4.3 Cardiac Ablation	270
6.5 Perfusion Chamber	279
6.5.1 General Description	279
6.5.2 Dose–Response Curve	282
6.5.3 Depth and Rate of Heating	282
6.5.4 Effects of Flow on Surface Temperature	284
6.5.5 Lesion Volume	284
6.5.6 Limitations	285
6.6 RF Gastroesophageal Reflux Disease	286
6.7 Endometrial Ablation	287
6.7.1 Microwave Endometrial Ablation	287
6.7.2 RF Endometrial Ablation	287
6.8 Microwave Measurement Techniques: Examples	288
6.8.1 Introduction	288
6.8.2 Method of Measuring Blood Perfusion (Flow) in Heart Muscle by Use of Microwave Energy	289
6.8.3 Lumen Measurement of Arteries Utilizing Microwave Apparatus	290
6.9 Future Research	294

6.9.1	Microwave Tissue Welding	294
	<i>In Vitro and In Vivo Experimental Studies</i>	294
	<i>Previous Approaches to Anastomosis</i>	296
	<i>Bench-Top Tests</i>	297
	<i>Doping Biological Solder</i>	297
	<i>In Vitro Vessel Anastomosis</i>	299
	<i>In Vivo Experiment</i>	300
6.9.2	Endoscopic Light Source and Microwaves for Photodynamic Therapy	301
6.9.3	Microwave Balloon Catheter	302
6.9.4	Thermally Molded Stent for Cardiology, Urology, and Other Medical and Veterinary Application	303
	References	304
	Problems	313
	Index	315
