ABA *see* abscisic acid

abiotic stress factors, vegetable oil yield and composition 81

abscisic acid (ABA)

*see also* phytohormones

biosynthesis 169–172

role 177

signaling 175

acid-base catalyzed process, biodiesel 59

acid-catalyzed methylation 68

acid-catalyzed transesterification, biodiesel 58–59

adaptation of roots and leaves, salinity stress 111–112

aflatoxins, peanut (*Arachis hypogea*) 8

AM fungi *see* arbuscular mycorrhizal (AM) fungi

American Standard for Testing Materials (ASTM) 63–65

*Moringa peregrina* 71–72

amino acids, soybean (*Glycine* spp.) 104

animal feeds, industrial uses of oilseeds 257

antioxidants, environmental stress factors 92–95

applications, oilseed crops 9–11

arbuscular mycorrhizal (AM) fungi 113, 186

*olive* (*Olea europaea*) 195

Aromatic Roasted Peanut Oil (ARPO) 8

ascorbic acid (AsA), biochemical responses to heavy metals 237

ASTM *see* American Standard for Testing Materials auxin

*see also* phytohormones

biosynthesis 166–167

role 176

signaling 172–173

bioactive compounds

*oilseed crops* 254–255

role in human nutrition 254–255

salinity stress 110–111

bioactive soybean components 105–106

bioavailability of minerals, plant growth-promoting rhizobacteria (PGPR) 190–191

biochar and composts, phytoremediation of heavy metal contaminated soils 229–230

biochemical responses to heavy metals 215–216, 237–238, 241–244

ascorbic acid (AsA) 237

carotenoids 238

chlorophyll 238

future prospects 242–244

phenolic compounds 238

proline 237

reactive oxygen species (ROS) 237, 239

total soluble protein content 238

biodegradable synthetic chelators, phytoremediation of heavy metal contaminated soils 213

biodiesel 3, 9–10, 52–74

acid-base catalyzed process 59

acid-catalyzed transesterification 58–59

from canola (*Brassica napus*) 53–54, 67–69

castor bean oil 27–28

characterization 63–67

from conventional oils 67–69

defining 53

enzymatic catalysis 60

enzymatic catalyzed transesterification 60

heterogeneous catalyzed transesterification 59–60

homogeneous acid-catalyzed transesterification 58–59

homogeneous base-catalyzed transesterification 56–57

homogeneous catalysis 56–59

from insect oils 70, 72–73

from jatropha (*Jatropha curcas*) 69–70

from Marula (*Sclerocarya birrea*) 74
from melon bug (*Aspogopus vidiuats*) 70, 72–73
from *Moringa peregrina* 70–72
plant capacity 54
processing techniques and methods 54–63
production 54
prospects 54
in-situ transesterification 62–63
from sorghum bug (*Agonoscelis pubescens*) 70, 72–73
sources 53–54
standards 63–67
supercritical alcohol transesterification 61
transesterification using microwave irradiation 62
transesterification using ultrasonic irradiation 61–62
from unconventional oils 69–74
from waste vegetable oil (WVO) 68–69
biodiesel industry 11–13, 53
biodieselhol 68
biofuel 3
advantages 52–53
castor bean oil 27–28
usage statistics 52–53

salinity stress
adaptation of roots and leaves 111–112
bioactive compounds 110–111
canola (Brassica napus) 84–85
coping mechanisms 108–110
endophytic fungi 113
exogenous substances 114–115
fungi, endophytic 113
gibberellins (GA) 114
glycophytes 107
growth response 108, 111
halophytes 107
micronutrients 110–111
nitric oxide (NO) 114–115
olive (Olea europaea) 88–89
phenolic compounds 94
plant growth-promoting bacteria (PGPB) 113–114
plant growth-promoting rhizobacteria (PGPR) 113–114, 189
plant response 108–110
pulsed magnetic field (PMF) 113
salicylic acid (SA) 114–115
soybean (Glycine spp.) 83, 110–115
sunflower (Helianthus annuus) 86
symbiotic nitrogen-fixing bacteria 114
tocopherols 95
salinity tolerance, castor bean (Ricinus communis) 19
SA see salicylic acid
SBO see sorghum bug (Agonoscelis pubescens)
seed analysis, castor bean (Ricinus communis) 19
seed diversity, castor bean (Ricinus communis) 19
seed toxicity, castor bean (Ricinus communis) 23–24
seed yield, castor bean (Ricinus communis) 23–24
selenium
hyperaccumulation 211
phytoremediation of contaminated soils 211
sesame (Sesamum indicum)
classification 250, 251
cultivation 3
microbes, plant root associating 196, 197
plant growth-promoting rhizobacteria (PGPR) 196, 197
production 252–253
signaling
see also communication, plant-microbe
phytohormones 172–176
plant-microbe communication 188–189
significance of oilseed crops 240
silicon containing amendments, phytoremediation of heavy metal contaminated soils 229
siquile (pods) development, phytohormones 179
SNVD see sunflower necrosis virus disease
SOD activity
heavy metals 239
reactive oxygen species (ROS) 239
soil temperature
biophysical parameters 276–280
Indian mustard (Brassica juncea) 276–280
sorghum bug (Agonoscelis pubescens)
biodiesel from 70, 72–73
fatty acid composition 72, 73
soybean (Glycine spp.) 102–117
adaptation of roots and leaves, salinity stress 111–112
amino acids 104
bioactive compounds, salinity stress 110–111
bioactive soybean components 105–106
carbohydrates 106
soybean (Glycine spp.) (cont’d)
chemical composition 103–107
classification 249–250
cultivation 3
dermothetic fungi, salinity stress 113
exogenous substances, salinity stress 114–115
fermentation 3
fungi, endophytic, salinity stress 113
future prospects 116–117
genetic diversity 3
 genetic engineering (GE) 115–116
growth response, salinity stress 111
importance 102
industrial uses 102–103
isoflavones 105–106
lipid content 82–83
microbes, plant root associating 113–114, 193–194, 196, 197
micronutrients, salinity stress 110–111
minerals 107
nitrogen fixation 103
nutrient components 103–104
oils 105
plant growth-promoting rhizobacteria
(PGPR) 113–114, 193–194, 196, 197
production 252–253
proteins 104
pulsed magnetic field (PMF), salinity stress 113
salicylic acid (SA), salinity stress 114–115
salinity stress 83, 110–115
symbiotic nitrogen-fixing bacteria, salinity stress 114
temperature stress 82–83
transgenic 115–116
uses 4, 5
vitamins 107
water stress 83
wild vs. cultivated, salinity stress 112
yield 82–83
standards
American Standard for Testing Materials (ASTM) 63–65
biodiesel 63–67
sulfur as fertilizer 1
sulfur-containing amendments, phytoremediation of heavy metal contaminated soils 228
sunflower (Helianthus annuus)
classification 250
diseases 141–143
history of cultivation 139
lipid content 85–86
microbes, plant root associating 192–193, 196
plant growth-promoting rhizobacteria
(PGPR) 192–193, 196
production 139–140
resistance 141–147
resistance to broomrapes (Orobanche spp.) 144–147
resistance to pathogens 141–143
salinity stress 86
sunflower necrosis virus disease (SNVD) 193
temperature stress 85–86
uses 4, 5–6, 139–140
water stress 86
yield 85–86
sunflower necrosis virus disease (SNVD) 193
sunflower vampire (Orobanche cumana) 131–134
distribution 134, 135
identification 131–134
races 132–134
resistance 132–134, 136
supercritical alcohol transesterification, biodiesel 61
symbiotic nitrogen-fixing bacteria, salinity stress 114
temperature stress
canola (Brassica napus) 84
fatty acid composition 90–91
olive (Olea europaea) 87
soybean (Glycine spp.) 82–83
sunflower (Helianthus annuus) 85–86
tocopherols 94
thallium, mustard cultivation 2
thermal energy use efficiency
biophysical parameters 270–273
Indian mustard (Brassica juncea) 270–273
thermal indices, biophysical parameters, Indian mustard (Brassica juncea) 265–280
tocopherols
environmental stress factors 94–95
salinity stress 95
temperature stress 94
water stress 95
total soluble protein content, biochemical responses to heavy metals 238
transesterification
in-situ 62–63
using microwave irradiation, biodiesel 62
using ultrasonic irradiation, biodiesel 61–62
transesterification reaction, biodiesel 55–56
transgenic oilseed crops 1–2
transgenic soybean (Glycine spp.), role in agriculture 115–116
triglycerides transesterification 55–56
ultrasonic irradiation, transesterification using 61–62
unconventional oils, biodiesel from 69–74
uses of oilseeds, industrial see industrial uses of oilseeds
vampire weeds 123–125
see also broomrapes
vegetable oil yield and composition, environmental stress factors 80–96
Verticillium wilt of olive (VWO) 195
vitamins, soybean (Glycine spp.) 107
VWO see Verticillium wilt of olive
waste vegetable oil (WVO), biodiesel from 68–69
water absorption, seed lipid concentration effect 41–43
water extraction, soil 1
water stress
  canola (Brassica napus) 84
  fatty acid composition 92
  olive (Olea europaea) 88
  phenolic compounds 93–94
  soybean (Glycine spp.) 83
sunflower (Helianthus annuus) 86
tocopherols 95
weather susceptibility, oilseed crops 264–265
WVO see waste vegetable oil
yield 82–89
  abiotic stress factors, vegetable oil yield and composition 81
  biotic stress factors, vegetable oil yield and composition 81
  canola (Brassica napus) 83–85
  castor bean (Ricinus communis), seed yield 23
  environmental stress factors, vegetable oil yield and composition 80–96
  olive (Olea europaea) 87–89
  palm (Elaeis guineensis) 80–81, 82, 86–87
  soybean (Glycine spp.) 82–83
  sunflower (Helianthus annuus) 85–86
  vegetable oil yield and composition, environmental stress factors 80–96
zinc
  bioavailability 190
  hyperaccumulation 209–211
  phytoremediation of contaminated soils 209–211
