Symposium on Molecular mechanisms influencing aggressive behaviours, held at the Novartis Foundation, London, 20–22 July 2004

Editors: Gregory Bock (Organizer) and Jamie Goode

This meeting was based on a proposal made by Donald Pfaff, Barry Keverne and Randy Nelson

- Donald Pfaff** Introduction 1
- Robert J. Blanchard** and **D. Caroline Blanchard** Some suggestions for revitalizing aggression research 4
Discussion 13
- Robin Lovell-Badge** Aggressive behaviour: contributions from genes on the Y chromosome 20
Discussion 33
- Diane M. Robins** Androgen receptor and molecular mechanisms of male-specific gene expression 42
Discussion 53
- Edward S. Brodtkin** Quantitative trait locus analysis of aggressive behaviours in mice 57
Discussion 69
- Donald Pfaff, Elena Choleris** and **Sonoko Ogawa** Genes for sex hormone receptors controlling mouse aggression 78
Discussion 89
- General discussion I** 96
- Catherine Dulac** Molecular architecture of pheromone sensing in mammals 100
Discussion 107
- Klaus-Peter Lesch** Serotonergic gene inactivation in mice: models for anxiety and aggression? 111
Discussion 140

Randy J. Nelson	Effects of nitric oxide on the HPA axis and aggression	147
	<i>Discussion</i>	160
General discussion II 167		
Berend Olivier	Serotonergic mechanisms in aggression	171
	<i>Discussion</i>	183
Craig F. Ferris	Vasopressin/oxytocin and aggression	190
	<i>Discussion</i>	198
Manuela Martinez and Concepción Blasco-Ros	Typology of human aggression and its biological control	201
	<i>Discussion</i>	208
Stephen J. Suomi	Aggression and social behaviour in rhesus monkeys	216
	<i>Discussion</i>	222
Ian W. Craig	The role of monoamine oxidase A (MAOA) in the aetiology of antisocial behaviour: the importance of gene – environment interactions	227
	<i>Discussion</i>	237
Final discussion 242
