

Index

Note to the reader: Throughout this index **boldfaced** page numbers indicate primary discussions of a topic. *Italicized* page numbers indicate illustrations.

SYMBOLS & NUMBERS

! (exclamation point), for command from history list, 107
(pound sign)
 for Perl comments, 554
 as prompt, 69
\$ (dollar sign), for script variables, 548
\$HOME variable, 134
\$SHELL variable, 134
* (asterisk; splat), as Bash wildcard, 105
/ (root) directory, 204
? (question mark), as Bash wildcard, 105
@-commands, 96
[] (brackets), as Bash wildcard, 105
\
 (backslash), for quoting, 106
~ (tilde), 106
3M Corporation, 265
10Base2, 376
10Base5, 376
10BaseT, 376
100BaseT, 376
1000Base T, 376
1024-cylinder boundary, 190, 251
16550A UARTs, 344

A

Abacus Project, 516
AC-97 sound hardware, 33
Accelerated X (Xi Graphics), 420
access database file for sendmail, 451
access mode of files, 111–112
Account Configuration dialog box, 50, 51
address masquerading, 446–447
addresses, network, 372–375. *See also* IP addresses
adduser command, 108
administrative tools. *See also* system logbook; Webmin
 command-line tools, 101–128. *See also* Bash shell
 file-handling commands, 110–118
 filesystem commands, 118–122
 network commands, 122–125
 printer management commands, 125–126
 user account commands, 108–110
admintool (Solaris), 10
Advanced Intelligent Tape (AIT), 268

Advanced Maryland Automatic Network Disk Archiver
 (AMANDA), 296–297
Advanced Package Tool (APT), 237, 257–258
Advanced Technology Attachment Packet Interface
 (ATAPI), for tape drives, 269
afio utility, 294–296
agetty program, 348
AIT (Advanced Intelligent Tape), 268
aliases for computer, 453
AMANDA (Advanced Maryland Automatic Network
 Disk Archiver), 296–297
amateur radio, kernel configuration for, 248
AMD, 21, 22
anti-spam measures, 449
Apache Web server, 401
append, in lilo.conf file, 65
appending to file with redirection, 104–105
Apple filesystems, 167–168
AppleTalk, 372
Application layer in network stack, 372
application software. *See also* software administration
 in X, 433–434
ApplixWare, font server with, 426
APSPFilter, 327
APT (Advanced Package Tool), 237, 257–258
apt package (Debian), 39
archival storage
 CD-R for, 275
 to local directory
 with cpio, 292–293
 with tar, 289–291
 to tape, 293
ASPFiler, 320
 in Slackware, 331–332
 in SuSE, 331
asterisk (*), as Bash wildcard, 105
at command, 218–219, 571–572
ATAPI (Advanced Technology Attachment Packet Inter-
 face), 269
Athena, 430
attacks on system
 back door, 472
 buffer overflow, 473
 denial of service, 474–475
 password cracking, 475
 physical attacks, 476–478

- scanning or sniffing, 473–474
- social attacks, 476
- spoofing, 474
- Trojan horse, 471–472
- trusted host, 473
- audio files, script to play, 551
- auditing plan, 479
- authconfig command, 483
- authentication process. *See also* passwords
 - security for, 479–488
 - pluggable authentication modules (PAM), 483–488, 579
- automounter, 186
- awk scripts, 558–559
- awk text processing tool, 544

B

- back door, 472
- back quotes, 551
- back ticks, 551
- background process, 217
- backslash (\), for quoting, 106
- backup
 - commands and utilities, 280–300
 - afio, 294–296
 - for CD-R and CD-RW, 275–280
 - cpio, 292–294
 - dump, 281–284
 - restore, 284–286
 - for tape, 272–274
 - tar, 286–292
 - of configuration files, 255
 - importance, 259
 - media, 263–280
 - Bernoulli drives, 271
 - CD-R and CD-RW, 269–270
 - floptical drives, 270
 - magneto-optical drives, 271
 - removable drives, 271
 - storage, 271–272
 - tapes, 263–269
 - of operating system, 300–302
 - strategies, 260–263
 - data-specific backups, 262–263
 - differential backups, 261–262
 - full and incremental backups, 260–261
 - third-party tools, 296–298
 - AMANDA, 296–297
 - BRU, 298, 298
 - Taper, 297
 - tips while restoring, 299–300
 - before user account deletion, 145
 - backup server, 263
 - badblocks command, 535–536
 - Bash shell, 101–107
 - command-line completion, 106
 - environment variables, 102–103
 - history list, 107–108
 - pipng, 103
 - quoting, 105–106
 - redirection, 104–105
 - scripts, 543
 - user initialization files, 81–87
 - wildcards, 105
 - Bash shell scripting language, 547–554
 - conditional expressions, 549–551
 - loops, 551–554
 - variables, 547–549
 - .bash_history file, 107
 - .bash_login, 81
 - .bash_profile, 81
 - Basic Input/Output System (BIOS), 58
 - batch processes, 216, 218–219
 - bdflush file, 530
 - BeFS, 168
 - benchmarks, 19–20
 - for performance measurement, 522–523
 - Berkeley Internet Name Daemon (BIND), 590
 - Bernoulli drives, 271
 - /bin directory, 204
 - partition for, 48
 - binary command, permission requirements
 - for executing, 490
 - binary files, 211
 - for software, 229
 - installation, 230–237
 - BIND (Berkeley Internet Name Daemon), 590
 - BIND package, 254
 - BIOS (Basic Input/Output System), 58
 - Bitstream FontTastic font server, 426
 - blackhole lists, 463–465
 - block devices, 215
 - kernel support for, 247
 - block size for ext2fs, 171
 - blocking, 214
 - Bluetooth, kernel support for, 249
 - /boot/boot.b file, 304
 - /boot directory, 205
 - placement on hard drive, 532
 - boot disk, 581
 - creating, 44, 52–53, 67–68
 - for disaster recovery, 303–304
 - DOS, 198
 - and security, 71, 476
 - Boot Loader Configuration screen, 48

- boot loaders, 54, 59–67
 - GRUB boot loader, 48, 59–62, 251
 - boot floppy creation, 581
 - changing default kernel, 584
 - configuration, 252–253
 - hardware detection at boot, 585
 - password for, 62, 476
 - single user mode in, 70
 - system setup for dual boot, 586
 - troubleshooting, 581–582
 - LILO (Linux Boot Loader), 48, 63–67, 251
 - boot floppy creation, 67–68, 581
 - changing default kernel, 583–584
 - configuration, 252
 - hardware detection at boot, 585
 - messages, 582–583
 - password for, 476
 - system setup for dual boot, 585–586
 - /boot/map file, 64
 - boot process, 58–59
 - displaying messages during, 127
 - Master Boot Record, 59
 - boot loader removal, 586–587
 - installing lilo.conf in, 66–67
 - overwritten, 53
 - with new kernel, 583–584
 - in rescue mode, 305
 - system setup for dual boot, 585–586
 - troubleshooting, 580–587
 - viewing log from, 53
 - boot.img file, 44
 - bootnet.img image, 303
 - BootPrompt-HOWTO, 67
 - borders of windows, 427
 - bottleneck, 520
 - finding, 524–528
 - Bourne Again Shell. *See* Bash shell
 - Bourne shell, scripts, 543
 - brackets ([]), as Bash wildcard, 105
 - broadcast by DHCP client, 378
 - BRU, 298, 298
 - data recovery, 306
 - BSD-style startup method, 57
 - buffer overflow, 473
 - buffers
 - for afio, 294
 - flushing, 122
 - bugs, websites about, 256–257
 - bulk e-mail, 461
 - bulletin-board systems, 353
 - bzImage kernel file, 251
- ## C
- Caldera, 10
 - hardware compatibility list, 33
 - OpenLinux, 37
 - website for updates, 255
 - cameras, 343
 - capacity planning, 8–9
 - case sensitivity
 - of commands, 108
 - of file names, 207
 - case statement in scripts, 563
 - Castlewood Orb drives, 183
 - cat command, 110–111, 529–530
 - to create boot floppy, 44
 - permission requirements for executing, 490
 - in scripts, 572
 - cd command, permission requirements for executing, 489
 - CD-R
 - backup to, 275–280
 - quality, 299
 - CD-ROM, 269
 - installing Linux from, 44
 - mount options for, 184–185
 - reading discs, 184–185
 - setup, 45
 - CD-RW (CD-Rewritable), 270
 - backup to, 275–280
 - overwriting, 277
 - CD writer, 269–270
 - CDC-ACM (Communication Device Class Abstract Control Model) protocol, 352
 - CDE (Common Desktop Environment), 432
 - cdrecord command, 277–279
 - central processing unit (CPU). *See* CPU (central processing unit)
 - chage command, 144–145, 482–483
 - CHAP authentication protocol, 355
 - character device, 215
 - kernel support for, 249
 - chattr command, 477, 535
 - checksum, 472
 - chgrp command, group changes for file, 112
 - child processes, 220–221
 - chkconfig utility, 83, 508–511
 - sample output, 84–86, 509–510
 - chmod command, 111–112, 477
 - chown command, 112
 - CIFS (Core Internet Filesystem), 169, 335
 - classes of IP addresses, 373–374
 - Classic X Window System group, 50
 - client
 - DHCP, 378
 - PAM, 484

- Samba as, 397–398
- X security options, 410
- clusters, 27, 28
- Coda, 169
- code freeze, 246
- collisions on networks, 382
- color depth, XF86Config file settings for, 416–417
- colormap, 594–595
- combining variables in scripts, 548
- command-line tools, 101–128. *See also* Bash shell
 - file-handling commands, 110–118
 - filesystem commands, 118–122
 - network commands, 122–125
 - printer management commands, 125–126
 - user account commands, 108–110
 - to add new user, 139–140
- commands
 - permission requirements for executing, 489–490
 - in scripts, 547
- comments
 - in Bash scripts, 545
 - in Perl, 554
- Common Desktop Environment (CDE), 432
- Common Unix Printing System (CUPS), 326
- Communication Device Class Abstract Control Model (CDC-ACM) protocol, 352
- communication with users, 13–14
- comparing files, 113
- compatibility of hardware, 33
- compiling source code, 238–241
 - for efficiency, 537–540
 - tarballs, 240–241
- complete backup, 301–302
- compress utility, for tar compression, 286
- compression of data
 - by afio utility, 294
 - by helical scan drives, 264–265
- computers
 - configuration details in logbook, 12
 - connectors, 340
 - exporting share, 389
- conditional expressions
 - in Bash shell scripting language, 549–551
 - in scripts, 546
- configure script, for tarballs, 241
- console, 348
 - kernel support for drivers, 249
 - serial-port, 350–351
- control statements in scripts, 546–547
- controllerless modems, 346
- copying files, 112
- Core Internet Filesystem (CIFS), 169, 335
- corrupted tar backups, 286

- cp (copy) command, 112
 - to move kernel, 251
 - vs. tar, 290
- cpio utility, 292–294
- CPU (central processing unit)
 - kernel optimization for, 538
 - optimizing kernel for, 246
 - performance, 21–22, 520
 - for word processing workstation, 24
- crackers, 469–470. *See also* security
 - detecting intrusion, 514–516
 - system access by, 135
- cracklib tool, 475
- credibility in user communications, 14
- cron daemon, 569–570
 - running fetchmail from, 459
- crypt command, 140
- CUPS (Common Unix Printing System), 326
- cut command, in scripts, 572–573
- cylinders in hard drives, 583
- Cyrix, 21

D

- daemon mode for sendmail, 452
- daemons, 216, 219
 - for POP and IMAP, 454–455
 - restarting, 226
- daisy-wheel printers, 312, 315
- data compression, by helical scan drives, 264–265
- Data Encryption Standard (DES), 480
 - /etc/passwd file, 481
- Data Link layer in network stack, 371
- data-specific backups, 262–263
- data transfer to new drive, 196
- date command, 126–127
- Daylight Savings Time, 50
- dd utility, 113
 - to create boot floppy, 44, 68
 - to create install disk, 304
- Debian, 38–39
 - defrag utility, 534
 - Exim, 444
 - inittab file, 76–80
 - installing package, 234–237
 - mailing lists, 100
 - printing process in, 330–331
 - rcS file, 78–80
 - website for updates, 255
- Deception Tool Kit, 516
- decompressing files, GRUB for, 61
- default route, 383
- defrag utility, 534

- deleting
 - groups, 154–155
 - user accounts, 145–147
- denial of service attack, 474–475
- dependency
 - checking by rpm, 231–232
 - creating information during kernel compile, 250
 - unresolved, 52
- DES (Data Encryption Standard), 480
 - /etc/passwd file, 481
- desktop background, 427
- desktop environments, 430–433
 - mixing components, 433
 - performance tuning, 540
- /dev/cua*n* device, 343
- /dev directory, 205
 - partition for, 48
- /dev/fd0 device, 181
- /dev/hdb device, 183
- /dev/ht0 device, 274
- /dev/nht0 device, 274
- /dev/nrft0 device, 275
- /dev/nzqft0 device, 275
- /dev/rft0 device, 275
- /dev/sda device, 183
- /dev/st0 device, 274
- /dev/usb*l*p*n* device, 333
- /dev/zqft0 device, 275
- device files, 215
 - for floppy disks, 181
 - for serial devices, 343–345
 - for tape drives, 274–275
- DeXtop, 432
- df command, 118–119
- dhclient, 378
- DHCP (Dynamic Host Configuration Protocol), 378
- dhcpcd, 378
- Dial-up User List (DUL), 448, 464
- dictionary attack, 482
- diff command, 113
- differential backups, 261–262
 - with tar, 289
- digital linear tape, 266–267, 267
- digital signature, 471
- digital subscriber line (DSL), 352, 380
- direct memory access (DMA), 533
- directories, 172, 201, 211–212
 - archiving to local, 292–293, 294–295
 - creating, 120
 - layout, 204–207
 - listing path of current, 109–110
 - moving, 114
 - quotas for, 41
- dirty buffers, 530
- disabling user accounts, 144–145
- disaster recovery, 8, 302–307. *See also* backup
 - with boot floppy, 303–304
 - rescue mode, 304–306
 - single user mode, 302–303
 - third-party tools, 306–307
- disk blocks, report on number free, 118
- disk drives. *See also* hard drives
 - performance issues, 521
 - USB devices, 344
- Disk Druid, 46–48, 47
- disk state, consistency, 161
- DISPLAY environment variable, 410
- distro wars, 34
- DMA (direct memory access), 533
- dmesg command, 53, 127, 378
- DNS (Domain Name System), 357, 374
 - for e-mail transfer, 437
 - server, 374–375
 - specifying, 385
- documentation. *See also* help resources
 - of script changes, 568
 - for tarballs, 240
- dollar sign (\$), for script variables, 548
- domains
 - names in network address, 372–373
 - for sendmail, 444–445
 - sendmail configuration for relay, 450–452
- DOS
 - boot floppy, 198
 - file names, 207
- dosutils directory, 68
- dot-matrix printers, 312–313
- Double Data Rate (DDR) RAM, 23
- dpkg command, 235–236
- drag bar of windows, 427
- drive letter in Microsoft OS, 185
- drivers
 - kernel compilation to remove or add, 242
 - performance issues, 522
- DSL (digital subscriber line), 352, 380
- dual-booting, 585–586
- DUL (Dial-up User List), 448
- dumb terminals, 347. *See also* terminals
- dump utility, 281–284
 - remote use, 283–284
- dumpe2fs command, 535
- dye-sublimation printers, 315
- dynamic files, vs. static, 204
- Dynamic Host Configuration Protocol (DHCP), 378

E

- e-mail. *See also* mail servers; spam
 - mail transfer, 437
 - for user communication, 14
- e2fsck command, 536
- EAs (extended attributes), 165
- echo command, 103
 - in scripts, 574
- EHCI (Enhanced Host Controller Interface), 342
- EIDE drives, 195
- eject button, unmounting and, 181
- emergency boot floppy, 304
- Enhanced Host Controller Interface (EHCI), 342
- Enhanced Software Technologies (EST), 298
- Enlightenment, 428
- Enterprise Linux Support, 98–99
- environment variables, 102–103
 - Bash scripts and, 548
 - in Debian rcS file, 80
 - DISPLAY, 410
 - /etc/profile file for system-wide definitions, 81
 - HISTFILE, 107
 - for man command, 99
 - PATH, 102
 - TERM, 350
 - for X, 409
- eof keyword, in mt utility, 274
- erasing tapes, mt utility for, 273
- error correction, and RAID, 29
- error messages. *See* troubleshooting
- error stream, 103
- EST (Enhanced Software Technologies), 298
- /etc/apt/sources.list file, 258
- /etc/auto.misc configuration file, 186
- /etc/crontab file, default for Red Hat, 569
- /etc directory, 205
 - partition for, 48
- /etc/exports file, for directory sharing, 388–389
- /etc/fstab file
 - entries for filesystem mount, 177–179
 - GUI system configuration tools for editing, 180
- /etc/group file, 131, 148–150
 - backup, 135
 - manually editing, 150–151, 153
- /etc/groups file, 109
- /etc/HOSTNAME file, 381
- /etc/hostname file, 381
- /etc/hosts file, 381, 590
- /etc/hosts.allow file, 511–512
 - and mounting filesystems, 597
- /etc/hosts.conf file, 590
- /etc/hosts.deny file, 511, 512–513
- /etc/inetd.conf file, 404
- /etc/inittab file, 71, 116
 - for Debian, 76–80
 - for Red Hat Linux, 71–76
 - run level designation in, 421
 - running getty programs from, 349
- /etc/issue file, 76
- /etc/lilo.conf file, 63–64
 - changing, 252
 - global section, 64–66
 - installing in Master Boot Record, 66–67
 - per-image section, 66
- /etc/logrotate.conf file, 86–87
- /etc/mail/access file, 451, 465–466

- /etc/modules.conf file, 598
 - and network card module, 377
- /etc/nologin file, 488
- /etc/pam.conf file, 485, 487
- /etc/pam.d file, 487
- /etc/pam.d/login file, troubleshooting, 588
- /etc/pam.d/system-auth file, 588
- /etc/passwd file, 131, 132–135, 481
 - backup, 135
 - corrupted, 598
 - mail-only account setup and, 455
 - removing user entry, 145
 - security risk from, 135
- /etc/ppp/chap-secrets file, 355–356
- /etc/ppp/options file, 364
- /etc/ppp/pap-secrets file, 355–356, 365
- /etc/printcap file, 316, 318
 - example, 321–322
 - for serial printer, 367
- /etc/profile file, 81
 - environment variables set by, 102
- /etc/raidtab file, 30–31
- /etc/rc.d/init.d scripts
 - log of starts and stops, 86
 - lpd script in, 321
- /etc/rc.d/rc script, 74–75, 116
 - in shutdown, 87
- /etc/rc.d/rc.local file, 76
- /etc/resolv.conf file, 385
- /etc/securetty file, 15
 - pts lines, 589
- /etc/services file, 375
- /etc/shadow file, 131, 482
 - backup, 135
- /etc/shutdown.allow file, 87–88
- /etc/skel directory, configuration files, 140
- /etc/sudoers file, 17–18

/etc/sysconfig/network file, 381
 /etc/X11/fs/config file, 423
 /etc/xinetd.conf file, 402–404
 Ethernet, 376
 Ethernet printer, 317
 Exabyte Mammoth drive, 267
 eXceed (Hummingbird), 420
 exec command, 220
 execute bit of program file, 544
 eXodus (PowerLAN), 420
 ext2fs (Second Extended Filesystem), 157, 161, 162

- filesystem check, 199
- filesystem-creation utilities, 195
- for floppy disks, 181
- history, 202
- structure, 170–171

 ext3fs (Third Extended Filesystem), 59, 163, 164

- filesystem-creation utilities, 195
- tune2fs command to adjust, 532

 extended attributes (EAs), 165
 extended partitions, 59, 192
 extfs (Extended Filesystem), 161, 162, 202

F

failover, 27
 Fast Filesystem (FFS), 168
 FAT (File Allocation Table), 165, 166

- for floppy disks, 181

 fax.allow file, 361
 faxes

- modems to send, 361–362
- receiving, 365–366

 faxheader file, 361
 faxrunq.config file, 362
 faxspool command, 362
 fdformat command, 181, 194
 fdisk utility, 30, 119, 191–193, 306

- commands, 191
- and GNU/Hurd partition, 581

 Fetchmail, 456–459
 fetchmailconf utility, 458
 .fetchmailrc file, 458
 FFS/UFS, 168
 FFS (Unix Fast Filesystem), 167
 FHS (Filesystem Hierarchy Standard), 34, 201, 202–207

- development, 203
- directory layout, 204–207
- file characteristics, 207–215
 - type determination, 208–210
 - types defined, 210–215

 fiber-optic cable, 376
 FIFO (first in, first out), 213
 File Allocation Table (FAT), 165, 166

- for floppy disks, 181

 file command, 113, 208
 file-handling commands, 110–118
 file manager, in desktop environment, 431
 file names, 207

- changing, 114
- conversion to lowercase, 176
- length in FAT filesystem, 166
- links to access same file, 212

 file permissions, 111–112, 489–490
 file sharing with TCP/IP, 387–398

- with Unix or Linux, 388–391
- with Windows, 391–398

 file system check order, in /etc/fstab file, 178
 File Transfer Protocol (FTP) server, 399
 file viewer, less command for, 114
 files, 201

- access mode of, 111–112
- characteristics, 207–215
- comparing, 113
- copying, 112
- determining user of, 122
- group changes, 112
- moving, 114
- owner of, 112
- printing beginning lines, 114
- printing end of, 115
- shareable and unshareable, 203–204
- static vs. dynamic, 204
- on tape backup, 273
- types, 208–215
 - commands to determine, 208–210
 - devices, 215
 - directories, 211–212
 - links, 212–213
 - normal files, 211
 - pipes, 213–214
 - sockets, 214–215
- undeleting, 307

 Filesystem Hierarchy Standard (FHS). *See* FHS (Filesystem Hierarchy Standard)
 filesystems, 157, 158–170, 202

- accessing, 172–188
 - mounting and unmounting, 172–181
 - removable media, 181–187
- commands, 118–122
- creating, 194–195, 534
- design, 170–172
 - inodes and directories, 171–172
 - physical structure, 170–171
- disk access without, 182
- foreign, 165–169

- kernel support for, 249
 - locating filesystems, 158–160
 - preparing to use, 158–159
 - unusual, 159–160
