

CONTENTS

Preface to the Third Edition	xxv
Acknowledgments	xxxii

PART One **DESCRIPTIVE STATISTICS** **1**

Chapter 1 **INTRODUCTION TO PSYCHOLOGICAL STATISTICS** **1**

A. Conceptual Foundation	1
What Is (Are) Statistics?	1
Statistics and Research	2
Variables and Constants	2
Scales of Measurement	3
Continuous versus Discrete Variables	6
Scales versus Variables	7
Parametric versus Nonparametric Statistics	7
Independent versus Dependent Variables	7
Experimental versus Correlational Research	8
Populations versus Samples	9
Statistical Formulas	10
Summary	10
Exercises	11
B. Basic Statistical Procedures	12
Variables with Subscripts	12
The Summation Sign	12
Properties of the Summation Sign	13
Rounding Off Numbers	16
Summary	17
Exercises	18
C. Optional Material	18
Double Summations	18
Random Variables and Mathematical Distributions	19
Summary	20
Exercises	20

Chapter 2 **FREQUENCY TABLES, GRAPHS, AND DISTRIBUTIONS** **21**

A. Conceptual Foundation	21
Frequency Distributions	21
The Cumulative Frequency Distribution	22
The Relative Frequency and Cumulative Relative Frequency Distributions	23
The Cumulative Percentage Distribution	23
Percentiles	24
Graphs	24
Real versus Theoretical Distributions	28
Summary	29
Exercises	31

B. Basic Statistical Procedures	32
Grouped Frequency Distributions	32
Apparent versus Real Limits	32
Constructing Class Intervals	33
Choosing the Class Interval Width	33
Choosing the Limits of the Lowest Interval	34
Relative and Cumulative Frequency Distributions	35
Cumulative Percentage Distribution	35
Estimating Percentiles and Percentile Ranks by Linear Interpolation	36
Graphing a Grouped Frequency Distribution	37
Guidelines for Drawing Graphs of Frequency Distributions	38
Summary	40
Exercises	41
C. Optional Material	42
Stem-and-Leaf Displays	42
Summary	45
Exercises	45

Chapter 3

MEASURES OF CENTRAL TENDENCY AND VARIABILITY	46
A. Conceptual Foundation	46
Measures of Central Tendency	46
Measures of Variability	50
Skewed Distributions	58
Summary	62
Exercises	63
B. Basic Statistical Procedures	64
Formulas for the Mean	64
Computational Formulas for the Variance and Standard Deviation	66
Obtaining the Standard Deviation Directly from Your Calculator	68
Properties of the Mean	69
Properties of the Standard Deviation	71
Summary	72
Exercises	73
C. Optional Material	74
Box-and-Whisker Plots	75
Dealing with Outliers	77
Measuring Skewness	79
Measuring Kurtosis	80
Summary	82
Exercises	83
Key Formulas	83

Chapter 4

STANDARDIZED SCORES AND THE NORMAL DISTRIBUTION	87
A. Conceptual Foundation	87
z Scores	87
Finding a Raw Score from a z Score	89

Sets of z Scores	89
Properties of z Scores	90
SAT, T , and IQ Scores	91
The Normal Distribution	92
Introducing Probability: Smooth Distributions versus Discrete Events	94
Real Distributions versus the Normal Distribution	95
z Scores as a Research Tool	96
Sampling Distribution of the Mean	97
Standard Error of the Mean	98
Sampling Distribution versus Population Distribution	100
Summary	100
Exercises	101
B. Basic Statistical Procedures	102
Finding Percentile Ranks	103
Finding the Area between Two z Scores	104
Finding the Raw Scores Corresponding to a Given Area	106
Areas in the Middle of a Distribution	106
From Score to Proportion and Proportion to Score	107
Describing Groups	107
Summary	111
Exercises	112
C. Optional Material	113
The Mathematics of the Normal Distribution	113
The Central Limit Theorem	114
Probability	116
Summary	120
Exercises	120
Key Formulas	121

PART Two

ONE- AND TWO-SAMPLE HYPOTHESIS TESTS 123

Chapter 5	
INTRODUCTION TO HYPOTHESIS TESTING:	
THE ONE-SAMPLE z TEST	123
A. Conceptual Foundation	123
Selecting a Group of Subjects	123
The Need for Hypothesis Testing	124
The Logic of Null Hypothesis Testing	125
The Null Hypothesis Distribution	125
The Null Hypothesis Distribution for the One-Sample Case	126
z Scores and the Null Hypothesis Distribution	127
Statistical Decisions	128
The z Score as Test Statistic	129
Type I and Type II Errors	130
The Trade-Off between Type I and Type II Errors	131
One-Tailed versus Two-Tailed Tests	132
Summary	135
Exercises	135

B. Basic Statistical Procedures	136
Step 1. State the Hypotheses	136
Step 2. Select the Statistical Test and the Significance Level	138
Step 3. Select the Sample and Collect the Data	138
Step 4. Find the Region of Rejection	139
Step 5. Calculate the Test Statistic	140
Step 6. Make the Statistical Decision	141
Interpreting the Results	142
Assumptions Underlying the One-Sample z Test	142
Varieties of the One-Sample Test	144
Why the One-Sample Test Is Rarely Performed	144
Publishing the Results of One-Sample Tests	146
Summary	146
Exercises	148
C. Optional Material	149
NHT as a Spam Filter	150
Is the Null Hypothesis <i>Ever</i> True in Psychological Research?	153
Summary	154
Exercises	154
Key Formulas	155

Chapter 6

INTERVAL ESTIMATION AND THE t DISTRIBUTION	156
A. Conceptual Foundation	156
The Mean of the Null Hypothesis Distribution	157
When the Population Standard Deviation Is Not Known	157
Calculating a Simple Example	158
The t Distribution	158
Degrees of Freedom and the t Distribution	160
Critical Values of the t Distribution	161
Calculating the One-Sample t Test	162
Sample Size and the One-Sample t Test	162
Uses for the One-Sample t Test	163
Cautions Concerning the One-Sample t Test	163
Estimating the Population Mean	164
Summary	165
Exercises	166
B. Basic Statistical Procedures	167
Step 1. Select the Sample Size	167
Step 2. Select the Level of Confidence	167
Step 3. Select the Random Sample and Collect the Data	167
Step 4. Calculate the Limits of the Interval	168
Relationship between Interval Estimation and Null Hypothesis Testing	172
Assumptions Underlying the One-Sample t Test and the Confidence Interval for the Population Mean	173
Use of the Confidence Interval for the Population Mean	174
Publishing the Results of One-Sample t Tests	174
Summary	175
Exercises	176
C. Optional Material	177
Some Properties of Estimators	177
A More Robust t Test	178
Robust Confidence Intervals	182

When Should You Use Robust Methods and Which Ones?	184
Summary	185
Exercises	186
Key Formulas	186

Chapter 7 _____
THE *t* TEST FOR TWO INDEPENDENT SAMPLE MEANS **188**

A. Conceptual Foundation	188
Null Hypothesis Distribution for the Differences of Two Sample Means	189
Standard Error of the Difference	190
Formula for Comparing the Means of Two Samples	191
Null Hypothesis for the Two-Sample Case	192
The <i>z</i> Test for Two Large Samples	193
Separate-Variiances <i>t</i> Test	193
The Pooled-Variiances Estimate	194
The Pooled-Variiances <i>t</i> Test	195
Formula for Equal Sample Sizes	195
Calculating the Two-Sample <i>t</i> Test	196
Interpreting the Calculated <i>t</i>	196
Limitations of Statistical Conclusions	197
Summary	198
Exercises	198
B. Basic Statistical Procedures	199
Step 1. State the Hypotheses	200
Step 2. Select the Statistical Test and the Significance Level	200
Step 3. Select the Samples and Collect the Data	201
Step 4. Find the Region of Rejection	201
Step 5. Calculate the Test Statistic	202
Step 6. Make the Statistical Decision	203
Interpreting the Results	203
Confidence Intervals for the Difference between Two Population Means	204
Assumptions of the <i>t</i> Test for Two Independent Samples	206
HOV Tests and the Separate-Variiances <i>t</i> Test	208
When to Use the Two-Sample <i>t</i> Test	209
When to Construct Confidence Intervals	209
Heterogeneity of Variance as an Experimental Result	210
Publishing the Results of the Two-Sample <i>t</i> Test	210
Summary	211
Exercises	212
C. Optional Material	214
Zero Differences between Sample Means	214
Adding Variances to Find the Variance of the Difference	214
The Critical Value for the Separate-Variiances <i>t</i> Test	214
Random Assignment and the Separate-Variiances <i>t</i> Test	216
The <i>t</i> Test for Two Trimmed Means	217
Resampling Methods	218
Summary	219
Exercises	220
Key Formulas	220

Chapter 8	
STATISTICAL POWER AND EFFECT SIZE	222
A. Conceptual Foundation	222
The Alternative Hypothesis Distribution	222
The Expected t Value (Delta)	224
The Effect Size	226
Power Analysis	227
The Interpretation of t Values	228
Estimating Effect Size	229
Manipulating Power	230
Summary	231
Exercises	232
B. Basic Statistical Procedures	233
Using Power Tables	233
The Relationship between Alpha and Power	234
Power Analysis with Fixed Sample Sizes	235
Sample Size Determination	236
The Case of Unequal Sample Sizes	237
The Power of a One-Sample Test	238
Summary	239
Exercises	240
C. Optional Material	241
Calculating Power Retrospectively	241
Constructing Confidence Intervals for Effect Sizes	242
Robust Estimates of Effect Size	242
Refining the Spam-Filter Analogy	243
Another Advantage of NHT: Indicating the Probability of Replication	249
Summary	251
Exercises	252
Key Formulas	252

PART Three

HYPOTHESIS TESTS INVOLVING TWO MEASURES ON EACH SUBJECT	255
--	------------

Chapter 9	
LINEAR CORRELATION	255
A. Conceptual Foundation	255
Perfect Correlation	255
Negative Correlation	256
The Correlation Coefficient	256
Linear Transformations	257
Graphing the Correlation	258
Dealing with Curvilinear Relationships	259
Problems in Generalizing from Sample Correlations	261
Correlation Does Not Imply Causation	263
True Experiments Involving Correlation	264

Summary	264
Exercises	265
B. Basic Statistical Procedures	267
The Covariance	268
The Unbiased Covariance	268
An Example of Calculating Pearson's r	268
Alternative Formulas	269
Which Formula to Use	270
Testing Pearson's r for Significance	270
Understanding the Degrees of Freedom	272
Assumptions Associated with Pearson's r	272
Uses of the Pearson Correlation Coefficient	274
Publishing the Results of Correlational Studies	275
Summary	276
Exercises	276
C. Optional Material	278
The Power Associated with Correlational Tests	278
Fisher Z Transformation	280
The Confidence Interval for ρ	280
Testing a Null Hypothesis Other Than $\rho = 0$	281
Testing the Difference of Two Independent Sample r s	282
Summary	283
Exercises	283
Key Formulas	284

Chapter 10

LINEAR REGRESSION **286**

A. Conceptual Foundation	286
Perfect Predictions	286
Predicting with z Scores	287
Calculating an Example	287
Regression toward the Mean	288
Graphing Regression in Terms of z Scores	288
The Raw-Score Regression Formula	289
The Slope and the Y Intercept	290
Predictions Based on Raw Scores	291
Interpreting the Y Intercept	292
Quantifying the Errors around the Regression Line	292
The Variance of the Estimate	293
Explained and Unexplained Variance	294
The Coefficient of Determination	294
The Coefficient of Nondetermination	295
Calculating the Variance of the Estimate	295
Summary	295
Exercises	296
B. Basic Statistical Procedures	297
Life Insurance Rates	297
Regression in Terms of Sample Statistics	298
Finding the Regression Equation	298
Making Predictions	298
Using Sample Statistics to Estimate the Variance of the Estimate	299
Standard Error of the Estimate	300

Confidence Intervals for Predictions	301
An Example of a Confidence Interval	301
Assumptions Underlying Linear Regression	302
Regressing X on Y	302
Raw Score Formulas	303
When to Use Linear Regression	303
Summary	305
Exercises	306
C. Optional Material	308
The Point-Biserial Correlation Coefficient	308
Calculating r_{pb}	309
Deriving r_{pb} from a t Value	310
Interpreting r_{pb}	310
Strength of Association in the Population (Omega Squared)	311
Biserial r	312
Summary	313
Exercises	313
Key Formulas	314

Chapter 11

THE MATCHED t TEST	317
A. Conceptual Foundation	317
Before-After Design	317
The Direct-Difference Method	318
The Matched t Test as a Function of Linear Correlation	319
Reduction in Degrees of Freedom	321
Drawback of the Before-After Design	321
Other Repeated-Measures Designs	321
Matched-Pairs Design	322
Correlated or Dependent Samples	323
When Not to Use the Matched t Test	323
Summary	324
Exercises	325
B. Basic Statistical Procedures	326
Step 1. State the Hypotheses	326
Step 2. Select the Statistical Test and the Significance Level	326
Step 3. Select the Samples and Collect the Data	326
Step 4. Find the Region of Rejection	327
Step 5. Calculate the Test Statistic	328
Step 6. Make the Statistical Decision	328
Using the Correlation Formula for the Matched t Test	328
Raw-Score Formula for the Matched t Test	329
The Confidence Interval for the Difference of Two Population Means	330
Assumptions of the Matched t Test	331
The Varieties of Designs Calling for the Matched t Test	331
Publishing the Results of a Matched t Test	333
Summary	333
Exercises	334
C. Optional Material	336
Power of the Matched t Test	337
Effect Size for the Matched t Test	338

Summary	339
Exercises	340
Key Formulas	340

PART Four
ANALYSIS OF VARIANCE WITHOUT REPEATED MEASURES 342

Chapter 12	342
ONE-WAY INDEPENDENT ANOVA	342
A. Conceptual Foundation	342
Transforming the t Test into ANOVA	343
Expanding the Denominator	344
Expanding the Numerator	344
The F Ratio	345
The F Ratio As a Ratio of Two Population Variance Estimates	345
Degrees of Freedom and the F Distribution	346
The Shape of the F Distribution	347
ANOVA As a One-Tailed Test	347
Using Tables of F Values	348
An Example with Three Equal-Sized Groups	348
Calculating a Simple ANOVA	349
Interpreting the F Ratio	350
Advantages of the One-Way ANOVA	351
Summary	352
Exercises	352
B. Basic Statistical Procedures	353
An ANOVA Example with Unequal Sample Sizes	354
Step 1. State the Hypotheses	354
Step 2. Select the Statistical Test and the Significance Level	354
Step 3. Select the Samples and Collect the Data	354
Step 4. Find the Region of Rejection	355
Step 5. Calculate the Test Statistic	355
Step 6. Make the Statistical Decision	357
Interpreting Significant Results	357
The Sums of Squares Approach	358
Raw-Score Formulas	358
Assumptions of the One-Way ANOVA for Independent Groups	360
Testing Homogeneity of Variance	361
Power and Effect Size for ANOVA	362
Varieties of the One-Way ANOVA	365
Publishing the Results of a One-Way ANOVA	367
Summary	369
Exercises	371
C. Optional Material	373
Proportion of Variance Accounted for in ANOVA	373
The Harmonic Mean Revisited	376
The Analysis of Unweighted Means for One-Way ANOVA	377
Adjusting the One-Way ANOVA for Heterogeneity of Variance	377
Summary	380
Exercises	382
Key Formulas	382

Chapter 13	
MULTIPLE COMPARISONS	386
A. Conceptual Foundation	386
The Number of Possible t Tests	386
Experimentwise Alpha	387
Complex and Planned Comparisons	388
Fisher's Protected t Tests	388
Complete versus Partial Null Hypotheses	390
Tukey's HSD Test	391
The Studentized Range Statistic	391
Advantages and Disadvantages of Tukey's Test	392
Other Procedures for Post Hoc Pairwise Comparisons	393
The Advantage of Planning Ahead	395
Bonferroni t , or Dunn's Test	395
Summary	396
Exercises	397
B. Basic Statistical Procedures	398
Calculating Protected t Tests	398
Calculating Fisher's LSD	399
Calculating Tukey's HSD	400
Interpreting the Results of Post Hoc Pairwise Comparisons	401
Confidence Intervals for Post Hoc Pairwise Comparisons	401
Tukey's HSD versus ANOVA	402
The Modified LSD (Fisher-Hayter) Test	403
Which Pairwise Comparison Procedure Should You Use?	403
Complex Comparisons	403
Scheffé's Test	407
Orthogonal Contrasts	408
Modified Bonferroni Tests	410
Summary	412
Exercises	414
C. Optional Material	415
The Analysis of Trend Components	415
Summary	421
Exercises	422
Key Formulas	423

Chapter 14	
TWO-WAY ANOVA	425
A. Conceptual Foundation	425
Calculating a Simple One-Way ANOVA	425
Adding a Second Factor	426
Regrouping the Sums of Squares	427
New Terminology	427
Calculating the Two-Way ANOVA	428
Calculating MS_W	429
Calculating MS_{bet} for the Drug Treatment Factor	429
Calculating MS_{bet} for the Gender Factor	429
Graphing the Cell Means	430
The Case of Zero Interaction	431
General Linear Model	432
Calculating the Variability Due to Interaction	433

Types of Interactions	433
Separating Interactions from Cell Means	436
The F Ratio in a Two-Way ANOVA	437
Advantages of the Two-Way Design	438
Summary	439
Exercises	440
B. Basic Statistical Procedures	441
Step 1. State the Null Hypothesis	441
Step 2. Select the Statistical Test and the Significance Level	442
Step 3. Select the Samples and Collect the Data	442
Step 4. Find the Regions of Rejection	442
Step 5. Calculate the Test Statistics	442
Step 6. Make the Statistical Decisions	447
The Summary Table for a Two-Way ANOVA	447
Interpreting the Results	447
Post Hoc Comparisons for Significant Main Effects	448
Effect Sizes in the Two-Way ANOVA	449
Post Hoc Comparisons for a Significant Interaction	452
Assumptions of the Two-Way ANOVA	456
Advantages of the Two-Way ANOVA with Two Experimental Factors	456
Advantages of the Two-Way ANOVA with One Grouping Factor	457
Advantages of the Two-Way ANOVA with Two Grouping Factors	458
Publishing the Results of a Two-Way ANOVA	459
Summary	460
Exercises	461
C. Optional Material	464
Planned Comparisons for a Two-Way ANOVA	464
Interaction of Trend Components	465
The Two-Way ANOVA for Unbalanced Designs	466
The Concepts of the Three-Way Factorial ANOVA	468
Calculating the Three-Way ANOVA	476
Follow-Up Tests for the Three-Way ANOVA	478
$2 \times 2 \times 2$ Contrasts	479
Types of Three-Way Designs	479
Higher Order ANOVA	480
Summary	480
Exercises	481
Key Formulas	484

PART Five

ANALYSIS OF VARIANCE WITH REPEATED MEASURES	487
--	------------

Chapter 15

REPEATED MEASURES ANOVA	487
--------------------------------	------------

A. Conceptual Foundation	487
Calculation of an Independent-Groups ANOVA	487
The One-Way RM ANOVA as a Two-Way Independent ANOVA	488
Calculating the SS Components of the RM ANOVA	489

Comparing the Independent ANOVA with the RM ANOVA	490
The Advantage of the RM ANOVA	491
Picturing the Subject by Treatment Interaction	492
Comparing the RM ANOVA to a Matched t Test	492
Dealing with Order Effects	494
Differential Carryover Effects	495
The Randomized-Blocks Design	495
Summary	496
Exercises	497
B. Basic Statistical Procedures	498
Step 1. State the Hypotheses	499
Step 2. Select the Statistical Test and the Significance Level	499
Step 3. Select the Samples and Collect the Data	499
Step 4. Find the Region of Rejection	499
Step 5. Calculate the Test Statistic	500
Step 6. Make the Statistical Decision	501
Interpreting the Results	501
The Residual Component	502
The Effect Size of an RM ANOVA	503
Power of the RM ANOVA	504
Assumptions of the RM ANOVA	505
Dealing with a Lack of Sphericity	508
Post Hoc Comparisons	509
Varieties of Repeated-Measures and Randomized-Blocks Designs	510
Publishing the Results of an RM ANOVA	511
Summary	513
Exercises	514
C. Optional Material	517
Counterbalancing	517
Trend Analysis with Repeated Measures	519
The Two-Way RM ANOVA	520
Summary	524
Exercises	525
Key Formulas	527

Chapter 16

Two-Way Mixed Design ANOVA 528

A. Conceptual Foundation	528
The One-Way RM ANOVA Revisited	529
Converting the One-Way RM ANOVA to a Mixed Design ANOVA	530
Two-Way Interaction in the Mixed Design ANOVA	533
Summarizing the Mixed Design ANOVA	534
Interpreting the Results	535
The Varieties of Mixed Designs	535
Summary	537
Exercises	538
B. Basic Statistical Procedures	538
Step 1. State the Hypotheses	539
Step 2. Select the Statistical Test and the Significance Level	539
Step 3. Select the Samples and Collect the Data	539
Step 4. Find the Regions of Rejection	540

Step 5. Calculate the Test Statistics	541
Step 6. Make the Statistical Decisions	544
Interpreting the Results	544
Publishing the Results of a Mixed ANOVA	545
Assumptions of the Mixed Design ANOVA	546
A Special Case: The Before-After Mixed Design	547
Post Hoc Comparisons	548
Effect Sizes for a Mixed Design	551
An Excerpt from the Psychological Literature	552
Summary	553
Exercises	555
C. Optional Material	558
The Variance-Covariance Matrix for ANOVAs with an RM (or RB) Factor	558
Planned Comparisons for a Mixed-Design ANOVA: Trend Interactions	561
Removing Error Variance from Counterbalanced Designs	563
Relative Efficiency	566
Summary	566
Exercises	568
Key Formulas	569

PART Six

MULTIPLE REGRESSION AND ITS CONNECTION TO ANOVA 571

Chapter 17 --- MULTIPLE REGRESSION 571

A. Conceptual Foundation	571
Uncorrelated Predictors	572
The Standardized Regression Equation	573
More Than Two Mutually Uncorrelated Predictors	573
The Sign of Correlations	574
Two Correlated Predictors	574
The Beta Weights	575
Completely Redundant Predictors	577
Partial Regression Slopes	577
Degrees of Freedom	579
Semipartial Correlations	579
Calculating the Semipartial Correlation	580
Suppressor Variables	581
Complementary Variables	582
The Raw-Score Prediction Formula	583
Partial Correlation	584
Finding the Best Prediction Equation	586
Hierarchical (Theory-Based) Regression	587
Summary	588
Exercises	589
B. Basic Statistical Procedures	591
The Significance Test for Multiple R	591
Tests for the Significance of Individual Predictors	592
Forward Selection	593

Backward Elimination	595
Stepwise Regression	596
The Misuse of Stepwise Regression	596
Problems Associated with Having Many Predictors	597
Too Few Predictors	601
Minimal Sample Size	601
Basic Assumptions of Multiple Regression	602
Regression with Dichotomous Predictors	604
Multiple Regression as a Research Tool	605
Publishing the Results of Multiple Regression	608
Summary	609
Exercises	610
C. Optional Material	613
Dealing with Curvilinear Relationships	613
Moderator Variables	615
Multiple Regression with a Dichotomous Criterion	617
Path Analysis	620
Summary	623
Exercises	624
Key Formulas	625

Chapter 18

THE REGRESSION APPROACH TO ANOVA 627

A. Conceptual Foundation	627
Dummy Coding	628
The Regression Plane	628
Effect Coding	629
The General Linear Model	630
Equivalence of Testing ANOVA and R^2	630
Two-Way ANOVA as Regression	631
The GLM for Higher-Order ANOVA	633
Analyzing Unbalanced Designs	633
Methods for Controlling Variance	637
Summary	638
Exercises	640
B. Basic Statistical Procedures	641
Simple ANCOVA as Multiple Regression	641
The Linear Regression Approach to ANCOVA	644
Post Hoc Comparisons	651
Performing ANCOVA by Multiple Regression	652
Power and Effect Size	653
The Assumptions of ANCOVA	653
Additional Considerations	654
Factorial ANCOVA	655
Using Two or More Covariates	656
Alternatives to ANCOVA	657
Using ANCOVA with Intact Groups	658
Summary	659
Exercises	661
C. Optional Material	663
Multivariate Analysis of Variance	663
Discriminant Analysis	671
Using MANOVA to Test Repeated Measures	671

Summary	673
Exercises	674
Key Formulas	675

PART Seven
NONPARAMETRIC STATISTICS **677**

Chapter 19 _____
THE BINOMIAL DISTRIBUTION **677**

A. Conceptual Foundation	677
The Origin of the Binomial Distribution	678
The Binomial Distribution with $N = 4$	679
The Binomial Distribution with $N = 12$	680
When the Binomial Distribution Is Not Symmetrical	681
The Normal Approximation to the Binomial Distribution	682
The z Test for Proportions	683
Summary	684
Exercises	685
B. Basic Statistical Procedures	686
Step 1. State the Hypotheses	686
Step 2. Select the Statistical Test and the Significance Level	686
Step 3. Select the Samples and Collect the Data	686
Step 4. Find the Region of Rejection	687
Step 5. Calculate the Test Statistic	687
Step 6. Make the Statistical Decision	687
Interpreting the Results	688
Assumptions of the Sign Test	688
The Gambler's Fallacy	689
When to Use the Binomial Distribution for Null Hypothesis Testing	689
Summary	691
Exercises	692
C. Optional Material	692
The Classical Approach to Probability	692
The Rules of Probability Applied to Discrete Variables	693
Permutations and Combinations	694
Constructing the Binomial Distribution	696
The Empirical Approach to Probability	696
Summary	697
Exercises	698
Key Formulas	699

Chapter 20 _____
CHI-SQUARE TESTS **700**

A. Conceptual Foundation	700
The Multinomial Distribution	700
The Chi-Square Distribution	701
Expected and Observed Frequencies	701
The Chi-Square Statistic	702

	Critical Values of Chi-Square	702
	Tails of the Chi-Square Distribution	703
	Expected Frequencies Based on No Preference	704
	The Varieties of One-Way Chi-Square Tests	704
	Summary	706
	Exercises	707
B.	Basic Statistical Procedures	708
	Two-Variable Contingency Tables	708
	Pearson's Chi-Square Test of Association	708
	An Example of Hypothesis Testing with Categorical Data	709
	The Simplest Case: 2×2 Tables	712
	Assumptions of the Chi-Square Test	713
	Some Uses for the Chi-Square Test for Independence	714
	Publishing the Results of a Chi-Square Test	715
	Summary	715
	Exercises	716
C.	Optional Material	718
	Measuring Strength of Association	718
	Measuring Interrater Agreement When Using Nominal Scales	721
	Fisher's Exact Test	723
	Contingency Tables Involving More Than Two Variables	724
	Summary	725
	Exercises	725
	Key Formulas	726

Chapter 21

	STATISTICAL TESTS FOR ORDINAL DATA	728
A.	Conceptual Foundation	728
	Ranking Data	728
	Comparing the Ranks from Two Separate Groups	728
	The Sum of Ranks	729
	The U Statistic	729
	Dealing with Tied Scores	730
	When to Use the Mann-Whitney Test	731
	Repeated Measures or Matched Samples	733
	Summary	733
	Exercises	734
B.	Basic Statistical Procedures	735
	Testing for a Difference in Ranks between	
	Two Independent Groups: The Mann-Whitney Test	735
	Ranking the Differences between Paired Scores:	
	The Wilcoxon Signed-Ranks Test	739
	Correlation with Ordinal Data: The Spearman	
	Correlation Coefficient	743
	Summary	745
	Exercises	747
C.	Optional Material	748
	Testing for Differences in Ranks among Several Groups:	
	The Kruskal-Wallis Test	748
	Testing for Differences in Ranks among Matched Subjects:	
	The Friedman Test	750
	Kendall's Coefficient of Concordance	752

Summary	753
Exercises	754
Key Formulas	755

Appendix A

STATISTICAL TABLES **757**

A.1	Areas under the Standard Normal Distribution	757
A.2	Critical Values of the t Distribution	760
A.3	Power as a Function of δ and α	761
A.4	δ As a Function of α and Power	762
A.5	Critical Values of Pearson's r	763
A.6	Table of Fisher's Transformation from r to Z	764
A.7	Critical Values of the F Distribution for $\alpha = .05$	765
A.8	Critical Values of the F Distribution for $\alpha = .025$	766
A.9	Critical Values of the F Distribution for $\alpha = .01$	767
A.10	Power of ANOVA for $\alpha = .05$	768
A.11	Critical Values of the Studentized Range Statistic for $\alpha = .05$	769
A.12	Orthogonal Polynomial Trend Coefficients	770
A.13	Probabilities of the Binomial Distribution for $P = .5$	771
A.14	Critical Values of the χ^2 Distribution	772
A.15	Critical Values for the Mann-Whitney (Rank-Sum) Test	773
A.16	Critical Values for the Wilcoxon Signed-Ranks Test	775

Appendix B

ANSWERS TO SELECTED EXERCISES **777**
