

Index

Note to the Reader: Throughout this index **boldfaced** page numbers indicate primary discussions of a topic. *Italicized* page numbers indicate illustrations.

A

ACCEPT policy, 304–305
 access, network, 298–300
 local firewall rules, 303–307, 304
 server access rules, 301
 server shutdown, 300–301
 stand-alone firewalls, 307–309
 TCP wrappers, 302–303
 xinetd, 301–302
 access file, 261
 Access times option, 302
 accounts, 28–29
 adding, 30–32
 basics, 30
 deleting, 32
 modifying, 32–33
 script for, 48–49
 ACPI (Advanced Configuration and Power Interface)
 subsystem, 89–91
 acpi program, 91
 addresses
 I/O, 65–66
 IP, 235–236
 for server access, 301
 static configuration, 241–243
 network, 234–236
 Advanced Configuration and Power Interface (ACPI)
 subsystem, 89–91
 Advanced Intelligent Tape (AIT) format, 131
 Advanced Maryland Automatic Network Disk Archiver (AMANDA) tool, 133
 Advanced Package Tools (APT), 153, 156
 Advanced Power Management (APM), 89–90
 Advanced Technology Attachment (ATA) disks
 identifying, 78–79
 performance, 81–82
 AIT (Advanced Intelligent Tape) format, 131
 aliases, mail server, 261, 263
 aliases file, 263
 all_squash option, 274–275

Allowed IP or network addresses option, 302
 AMANDA (Advanced Maryland Automatic Network Disk Archiver) tool, 133
 AmphetaDesk program, 321
 anongid option, 274
 anonuid option, 274
 Apache configuration files, 268–269
 APM (Advanced Power Management), 89–90
 apm utility, 90
 AppleTalk Protocol Support option, 234
 APT (Advanced Package Tools), 153, 156
 apt-get utility, 124
 asterisks (*) in job schedules, 155
 async option, 274
 at command, 157
 ATA (Advanced Technology Attachment) disks
 identifying, 78–79
 performance, 81–82
 atq command, 157
 AuthorizedKeysFile option, 283
 automounters, 217

B

back-quote characters (') in scripts, 49
 Backup and Restore Utility (BRU), 133
 Backup operation field, 215
 backups, 129–130
 commands for, 134–135
 hardware for, 130–131
 restore strategy for, 135–136
 schedules for, 132
 software for, 133
 base-8 (octal) code for permissions, 15
 baselines for CPU testing, 165
 bases for passwords, 315–316
 bash shell (Bourne Again Shell), 2–3
 batch command, 157
 binary files, examining, 6

bind option, 302
 BIOS options, 54–56
 BIOS Setup Utility, 56
 for clock, 59
 for disks, 57–59, 58
 for hardware conflicts, 71–72
 miscellaneous, 60–61
 for on-board devices, 59–60, 60
 overview, 56–57, 57
 blocking network access, 298–309
 BlogBridge program, 321
 BogoMIPS test, 164–165
 boot device options, 59
 /boot/grub/grub.conf file, 224, 226–227
 boot loaders, 190, 221–223
 components, 223
 identifying, 223–224
 kernels for, 224–227
 testing, 227–228
 /boot partition, 193
 boot sectors, 223
 bootable flag, 201
 BOOTPROTO variable, 240–241
 Bourne Again Shell (bash shell), 2–3
 breaches, monitoring for, 319–322
 broadband connections, 231
 broadcast addresses, 235
 Broadcast option, 105
 BRU (Backup and Restore Utility), 133
 Bugtraq mailing list, 320
 bus numbers for USB devices, 74–75
 bus speed for USB devices, 75

C

c command in Vi, 27
 cable modems, 231
 case changes
 in command line, 8
 in Vi, 27
 case sensitivity of passwords, 316
 cat command, 5–6
 CD-based recovery system, 136

326 cd command – directories

- cd command, 6
 - chains, 303–307
 - changing case
 - in command line, 8
 - in Vi, 27
 - checksums, 321
 - chkconfig utility, 151, 240
 - chkrootkit program, 322
 - chmod command

 ListenAddress option, 282
 listening software, 247
 listing
 files, 5
 processes, 139–141, 141
 lists, mailing, 186
 ln command, 18–20
 load averages, 138–139
 loading files for Vi, 25
 LOADLIN loader, 136
 LoadModule line, 271
 local filesystems, 215–216
 local firewall rules, 303–307, 304
 local-host-names file, 261
 locate command, 22
 log books, 160–161
 adding entries to, 162
 starting, 161
 uses for, 163
 log daemons, 169
 log files, 169–170
 options for, 171–172
 reviewing, 175–176
 rotating, 173–175
 Logcheck tool, 175
 logging in, 4–5, 4
 logging out, 9
 logical partitions, 190
 Logical Volume Management (LVM), 79, 189
 logout command, 9

330 logout scripts – nice command

logout scripts, 42
 logrotate program, 168, 173
 loop option for mount, 211
 loopback traffic in firewalls, 306
 loops, 50–51
 low-level filesystems, 202
 low-level formatting, 202
 lpc command, 294
 lpq program, 293
 lpr program, 292–293
 lprm command, 293–294
 ls command, 5
 LVM (Logical Volume Management) filesystems, 79, 189

M

m4 file, 261
 MAC (Media Access Control) addresses, 235
 mail command, 47
 mail servers, 258–259
 accepting mail, 262–263
 email basics, 260
 hostname options in, 262
 redirecting mail, 263–264
 sendmail program, 258
 configuration files, 260–262
 as relay, 264–265
 MAILER line, 265
 mailing lists, 186
 make command, 127
 make config command, 85
 make install command, 127
 make menuconfig command, 85–86
 make modules_install command, 87
 make oldconfig command, 84–86
 make uninstall command, 128
 make xconfig command, 85–86
 Makefile file, 127
 man command, 8
 man pages, 178–179
 Mandriva distributions, 101
 masks, 242
 MASQUERADE_AS address, 262
 masquerade information, 246
 master browser configuration, 277
 MBR (Master Boot Record) for boot loaders, 223
 for primary partitions, 190
 Media Access Control (MAC) addresses, 235
 memory
 BIOS options for, 60
 DMA channels, 66
 limits on, 312–313
 testing, 165–166
 memory leaks, 166
 Minix Filesystem, 205
 mkdir command
 for mount points, 210
 for shared directories, 11
 mkfs tool, 206–207
 mkswap command, 207
 ModeLine setting, 97
 modems, 231
 modes in Vi, 24–25
 modprobe command, 240
 modular scripts, 51–52
 Module section for X server, 95
 Monitor section for X server, 95–97
 monitoring
 log files, 175
 network connections, 243–247
 performance, 163–169
 for security breaches, 319–322
 monitors, configuring, 96–97
 more command, 6
 mount command, 210–213
 Mount options field, 215
 Mount point field, 215
 mount points, 190
 mounting filesystems
 /etc/fstab for, 213–218
 manual process, 208–212
 mouse configuration, 95–96
 moving
 in command lines, 8
 files, 13
 mv command
 for files, 13
 for links, 19

N

NameVirtualHost directive, 269
 NAT (Network Address Translation) technology, 236
 native filesystems, 204
 navigating in Vi, 27
 NetBIOS (Network Basic Input/Output System) name, 276
 netstat program, 246
 redirecting output from, 35–36
 for server lists, 300
 Network Address Translation (NAT) technology, 236
 Network Basic Input/Output System (NetBIOS) name, 276
 Network File System (NFS), 206
 network masks, 235, 242
 networks, 230
 access to, 298–300
 local firewall rules, 303–307, 304
 server access rules, 301
 server shutdown, 300–301
 stand-alone firewalls, 307–309
 TCP wrappers, 302–303
 xinetd, 301–302
 addressing, 234–236
 bringing up, 238–243
 connection monitoring, 243–247
 DHCP configuration, 240–241
 file sharing servers, 272–279
 hardware
 configuring, 239–240
 description, 231–233
 hostname resolution in, 236–237
 mail servers, 258–265
 mounts for, 216–217
 port numbers, 237–238
 printers, 285–290, 288
 printing management, 290–296, 295
 protocol stacks, 233–234, 233
 routing configuration, 248–252, 248
 SSH servers, 280–285
 static IP address configuration, 241–243
 status, 246–247
 super servers, 252–254
 configuring, 254–257
 identifying, 254
 testing, 257
 TCP/IP. *See* TCP/IP (Transmission Control Protocol/Internet Protocol)

 ntsysv utility, 151
 numbers in passwords, 316

O

o command in Vi, 27
 obtaining software, 126
 octal (base-8) code for permissions, 15
 oftspd server, 128
 on-board devices, BIOS options for, 59–60, 60
 online documentation, 183–186
 open ports, 247
 open relay configurations, 259
 opening text in Vi, 27
 OpenSUSE distributions, 102
 /opt partition, 194
 optical media for backups, 131
 order, partition, 201
 outgoing relay configuration, 265
 output, redirecting, 35–36
 OUTPUT chains, 303–307
 owners
 in file searches, 22
 files and directories, 13–14
 mounts, 217
 permissions for, 14–17
 process, 142

P

p command in Vi, 26
 packages
 Debian, 112, 119–121
 deleting, 121
 installing, 122
 querying, 122–123
 system updates in, 123–124
 upgrading, 121–122
 XDMCP servers in, 101
 RPM
 deleting, 114
 installing, 115
 querying, 115–116
 upgrading, 115
 verifying, 116–117
 packets, 234
 pager programs, 6, 175

pam_limits module, 312
 Pan program, 185
 Parallel ATA (PATA) disks, 78
 parameters in scripts, 48–49
 Parted program, 195
 partial reinstatement, 136
 partial restores, 135
 partitions, 188
 creating, 195–202
 deleting, 198
 emergency recovery, 136
 schemes, 188–195
 existing systems in, 191–192, 191
 planning, 193–195
 space requirement estimates in, 192
 x86, 189–190
 table examination, 162, 197–198
 passwords, 313–315
 account, 29–32
 bases for, 315–316
 BIOS, 61
 login, 4
 protecting, 317–318
 Samba, 277–278
 server access, 301
 SSH servers, 284
 PATA (Parallel ATA) disks, 78
 \$PATH variable, 42–43
 PCI bus
 data checking for, 68
 timing options for, 60
 peer-to-peer configurations, 272
 percent signs (%) in Vi, 27
 performance, 163
 CPU, 164–165
 disk, 80–83, 166–167
 memory, 165–166
 ongoing tests, 167–169
 permissions
 in file searches, 22
 files and directories, 14–17
 PermitRootLogin option, 282
 personnel training, system log books for, 163
 PIDs (process IDs), 140–142, 146
 ping command, 244–245
 pipes, 33
 piping, 37–38
 planning partition schemes, 193–195
 PnP (Plug and Play) technology
 for hardware conflicts, 72
 for IRQs, 63
 POP protocol, 260
 port numbers, 237–238
 Portage package system, 125
 power management, 88
 ACPI, 90–91
 APM, 90
 BIOS options for, 60
 for hard disks, 91–92
 kernel support for, 89–90
 primary boot loaders, 223
 primary partitions, 190, 195
 printers and printing
 CUPS for
 adding printers with, 285–290, 288
 documentation for, 179–182, 180, 182
 GUI tools for, 294–296, 295
 lpc for, 294
 lpq for, 293
 lpr for, 292–293
 lprm for, 293–294
 network, 290–292
 priority
 process, 143–146
 system log messages, 171
 pristine code, 124
 privileged ports, 238
 privileges, superuser, 9
 /proc filesystem, 63–65, 251
 process IDs (PIDs), 140–142, 146
