Book I: SQL Concepts 7

Chapter 1: Relational Database Basics 9

Data Files and Databases	9
Irreducible complexity.....	10
The complex program/simple data organization	10
The simple program/complex data organization	12
Which type of organization is better?.....	12
Databases, Queries, and Database Applications	13
Making data useful	14
Retrieving the data you want — and only the data you want	14
Competing Database Models	14
The hierarchical database model.....	15
The network database model	17
The relational database model.....	20
What makes a database relational?.....	20
Codd's Rules	20
Inherent flexibility	23
The object-oriented database.....	23
The object-relational database	23
Why Did the Relational Model Win?	24

Chapter 2: Modeling a System	27
Capturing the Users' Data Model	27
Identifying and interviewing stakeholders	27
Reconciling conflicting requirements	28
Obtaining stakeholder buy-in	29
Translating the Users' Data Model to a Relational Model	29
Entity-Relationship modeling techniques	29
Entities	30
Attributes	30
Identifiers	31
Relationships	31
Drawing Entity-Relationship diagrams	34
Maximum cardinality	34
Minimum cardinality	35
Advanced E-R model concepts	37
Strong entities and weak entities	37
ID-dependent entities	39
Supertype and subtype entities	39
Incorporating business rules	40
A simple example of an E-R model	41
A slightly more complex example	42
Problems with complex relationships	46
Simplifying relationships using normalization	47
Translating an E-R model into a relational model	47
The Relational Database Hierarchy	47
Chapter 3: SQL Overview	49
Where SQL Came From	49
What SQL Does	50
The ANSI/ISO SQL Standard	51
What SQL Does Not Do	51
Available Implementations	52
Microsoft Access	52
Microsoft SQL Server	56
IBM DB2	56
Oracle	56
InterBase	57
MySQL	57
PostgreSQL	57
Chapter 4: SQL and the Relational Model	59
Sets, Relations, Multisets, and Tables	59
Functional Dependencies	60
Keys	61
Views	62

Users	63
Privileges	63
Schemas	64
Catalogs	64
Connections, Sessions, and Transactions.....	64
Routines	65
Paths	66
Chapter 5: The Major Components of SQL	67
The Data Definition Language (DDL)	67
The containment hierarchy	67
Creating tables	68
Specifying columns	68
Specifying constraints	69
Column constraints	70
Table constraints	71
Assertions.....	71
Creating other objects	72
Views	72
Schemas	77
Domains	77
Modifying tables and other objects	78
Removing tables and other objects	78
The Data Manipulation Language (DML)	78
Retrieving data from a database.....	79
Adding data to a table.....	80
Adding data the dull and boring way (typing it in)	80
Adding incomplete data.....	81
Adding data in the fastest and most efficient way:	
Bypassing typing altogether	81
Updating data in a table	81
Deleting data from a table	84
Updating views	85
The Data Control Language (DCL)	86
Granting access privileges	86
Revoking access privileges	87
Preserving database integrity with transactions	87
Chapter 6: SQL Characteristics	89
Executing SQL Statements	89
Interactive SQL	90
Challenges to combining SQL with a host language	90
Embedded SQL	91
Module language	93
Using Reserved Words Correctly	94

SQL's Data Types	94
Exact numerics	95
INTEGER.....	95
SMALLINT	96
BIGINT	96
NUMERIC.....	96
DECIMAL	96
BINARY LARGE OBJECT (BLOB).....	97
Approximate numerics	97
REAL	97
DOUBLE PRECISION	98
FLOAT.....	98
Character strings.....	99
CHARACTER	99
CHARACTER VARYING	99
CHARACTER LARGE OBJECT (CLOB).....	99
NATIONAL CHARACTER, NATIONAL CHARACTER VARYING, and NATIONAL CHARACTER LARGE OBJECT.....	100
Booleans	101
Datetimes.....	101
DATE.....	101
TIME WITHOUT TIME ZONE.....	101
TIME WITH TIME ZONE.....	102
TIMESTAMP WITHOUT TIME ZONE	102
TIMESTAMP WITH TIME ZONE	102
Intervals.....	103
XML type	103
Row types	104
Collection types.....	105
ARRAY	105
Multiset	105
REF types.....	106
User-defined types	106
Distinct types	106
Structured types	107
Data type summary.....	109
Handling Null Values	110
Applying Constraints	111
Column constraints.....	111
NOT NULL.....	111
UNIQUE	112
CHECK.....	112
Table constraints.....	113
Foreign key constraints	114
Assertions.....	115

Book 11: Relational Database Development..... 117

Chapter 1: System Development Overview119

The Components of a Database System.....	119
The database.....	120
The database engine.....	120
The DBMS front end.....	120
The database application.....	120
The user.....	121
The System Development Life Cycle.....	121
Definition phase.....	122
Requirements phase.....	123
Establishing requirements: An example.....	123
The users' data model.....	124
Statement of Requirements.....	124
Evaluation phase.....	125
Determining project scope.....	126
Reassessing feasibility.....	127
Documenting the evaluation phase.....	127
Design phase.....	127
Designing the database.....	128
The database application.....	129
Documenting the design phase.....	129
Implementation phase.....	130
Final documentation and testing phase.....	130
Testing the system with sample data.....	131
Finalizing the documentation.....	132
Delivering the results (and celebrating).....	132
Maintenance phase.....	132

Chapter 2: Building a Database Model135

Finding and Listening to Interested Parties.....	135
Your immediate supervisor.....	136
The users.....	136
The standards organization.....	137
Upper management.....	137
Building Consensus.....	138
What do people want, and how badly do they want it?.....	138
Arriving at a consensus.....	139
The three-option proposal.....	139
The Entity-Relationship Modeling Method.....	140
Entities.....	140
Attributes.....	141
Identifiers.....	141
Relationships.....	142

Maximum cardinality	145
Minimum cardinality	145
Business rules	147
Building a Relational Model	147
Different worlds, different terminology	147
The relational tradition	147
What exactly is a relation?	149
Functional dependencies	149
Keys	150
Being Aware of the Danger of Anomalies	150
Eliminating anomalies	152
The higher normal forms	155
The Database Integrity versus Performance Tradeoff	156

Chapter 3: Balancing Performance and Correctness 159

Designing a Sample Database	160
The E-R model for Honest Abe's	160
Converting an E-R model into a relational model	161
Normalizing a relational model	162
Handling binary relationships	164
A sample conversion	168
Maintaining Integrity	170
Entity integrity	171
Domain integrity	172
Referential integrity	172
Avoiding Data Corruption	174
Speeding Data Retrievals	175
Hierarchical storage	176
Full table scans	177
How indexes work	177
Creating the right indexes	177
Indexes and the ANSI/ISO Standard	178
Index costs	178
Query type dictates the best index	178
Point query	178
Multipoint query	179
Range query	179
Prefix match query	179
Extremal query	179
Ordering query	180
Grouping query	180
Equi-join query	180
Data structures used for indexes	180
B+ trees	181
Hash structures	181
Indexes, sparse and dense	181
Index clustering	181
Composite indexes	182

Index effect on join performance	183
Table size as an indexing consideration.....	183
Indexes versus full-table scans	183
Reading SQL Server Execution Plans.....	183
Robust execution plans	183
A sample database	184
A typical query.....	185
The execution plan	185
Running the Database Engine Tuning Advisor.....	185
Hot Tables and Load Balancing.....	187

Chapter 4: Creating a Database with SQL189

First Things First: Planning Your Database.....	189
Building Tables	190
Locating table rows with keys	191
Using the CREATE TABLE statement.....	192
Setting Constraints.....	193
Column constraints	193
Table constraints	194
Keys and Indexes	194
Ensuring Data Validity with Domains	194
Establishing Relationships between Tables	195
Altering Table Structure	198
Deleting Tables	199

***Book III: SQL Queries*201**

Chapter 1: Values, Variables, Functions, and Expressions203

Entering Data Values	203
Row values have multiple parts	203
Identifying values in a column	204
Literal values don't change.....	204
Variables Vary	205
Special Variables Hold Specific Values	206
Working with Functions.....	207
Summarizing data with set functions	207
COUNT	207
AVG	208
MAX	208
MIN	209
SUM.....	209
Dissecting data with value functions	209
String value functions	209
Numeric value functions.....	212
Datetime value functions	216

Using Expressions	217
Numeric value expressions	217
String value expressions.....	218
Datetime value expressions	218
Interval value expressions	219
Boolean value expressions.....	219
Array value expressions	220
Conditional value expressions.....	220
Handling different cases	221
The NULLIF special CASE	222
Bypassing null values with COALESCE	223
Converting data types with a CAST expression	223
Casting one SQL data type to another	224
Using CAST to overcome data type incompatibilities between SQL and its host language.....	224
Row value expressions	225

Chapter 2: SELECT Statements and Modifying Clauses 227

Finding Needles in Haystacks with the SELECT Statement	227
Modifying Clauses	228
FROM clauses.....	228
WHERE clauses	229
Comparison predicates.....	230
BETWEEN.....	231
IN and NOT IN	232
LIKE and NOT LIKE	234
SIMILAR.....	235
NULL.....	235
ALL, SOME, ANY	236
EXISTS	239
UNIQUE	240
DISTINCT.....	240
OVERLAPS	241
MATCH	241
The MATCH predicate and referential integrity.....	243
Logical connectives.....	245
AND.....	245
OR.....	246
NOT	247
GROUP BY clauses	247
HAVING clauses	249
ORDER BY clauses.....	249
Tuning Queries	251
SELECT DISTINCT.....	252
Temporary tables	255
The ORDER BY clause.....	259
The HAVING clause.....	262
The OR logical connective	266

Chapter 3: Querying Multiple Tables with Subqueries	269
What Is a Subquery?	269
What Subqueries Do	269
Subqueries that return multiple values	270
Subqueries that retrieve rows satisfying a condition	270
Subqueries that retrieve rows that don't satisfy a condition	271
Subqueries that return a single value	272
Quantified subqueries return a single value	275
Correlated subqueries	277
Using a subquery as an existence test	278
Introducing a correlated subquery with the IN keyword	279
Introducing a correlated subquery with a comparison operator	279
Correlated subqueries in a HAVING clause	281
Using Subqueries in INSERT, DELETE, and UPDATE Statements	282
Tuning Considerations for Statements Containing Nested Queries	285
Tuning Correlated Subqueries	290
 Chapter 4: Querying Multiple Tables with Relational Operators . .	 297
UNION	297
UNION ALL	299
UNION CORRESPONDING	300
INTERSECT	300
EXCEPT	302
JOINS	303
Cartesian product or cross join	303
Equi-join	305
Natural join	307
Condition join	307
Column-name join	308
Inner join	309
Outer join	310
Left outer join	310
Right outer join	312
Full outer join	313
ON versus WHERE	313
Join Conditions and Clustering Indexes	314
 Chapter 5: Cursors	 315
Declaring a Cursor	316
The query expression	317
Ordering the query result set	317
Updating table rows	319
Sensitive versus insensitive cursors	319
Scrolling a cursor	320

Opening a Cursor	320
Fetching Data from a Single Row	322
FETCH syntax	322
Absolute versus relative fetches	323
Deleting a row	323
Updating a row	324
Closing a Cursor	324

***Book IV: Data Security*325**

Chapter 1: Protecting Against Hardware

Failure and External Threats327

What Could Possibly Go Wrong?.....	327
Equipment failure	328
Platform instability.....	329
Database design flaws.....	330
Data entry error.....	330
Operator error	331
Taking Advantage of RAID.....	331
Striping.....	332
RAID levels	332
RAID 0.....	332
RAID 1.....	334
RAID 5.....	334
RAID 10.....	334
RAID level comparison.....	335
Backing Up Your System	335
Preparing for the worst	335
Full or incremental backup	336
Frequency.....	336
Backup maintenance.....	337
Coping with Internet Threats	337
Viruses	337
Worms	338
Denial-of-service attacks	339
Phishing scams	339
Zombie spambots.....	339
Installing Layers of Protection	340
Network layer firewalls.....	340
Application layer firewalls.....	340
Antivirus software	340
Vulnerabilities, exploits, and patches.....	341
Education	341
Alertness.....	341

Chapter 2: Protecting Against User Errors and Conflicts	343
Reducing Data Entry Errors	343
Data types: the first line of defense	344
Constraints: the second line of defense	344
Sharp-eyed humans: the third line of defense	345
Unreliable Database Design	345
Programming Errors	345
Conflicts Arising from Concurrent Operation	346
Atomicity, Consistency, Isolation, and Durability	347
Operating with Transactions	348
Using the SET TRANSACTION statement	348
Starting a transaction	349
Access modes	350
Isolation levels	350
Committing a transaction	352
Rolling back a transaction	352
Why roll back a transaction?	353
The log file	353
The write-ahead log protocol	354
Checkpoints	355
Implementing deferrable constraints	355
Getting Familiar with Locking	360
Two-phase locking	360
Granularity	361
Deadlock	361
Tuning Locks	362
Measuring performance with throughput	363
Eliminating unneeded locks	363
Shortening transactions	363
Weaken isolation levels (but verify carefully)	364
Controlling lock granularity	365
Don't run DDL statements concurrently with transactions	365
Partitioning insertions	365
Cooling down hot spots	365
Tuning the deadlock interval	366
Enforcing Serializability with Timestamps	366
Tuning the Recovery System	369
 Chapter 3: Assigning Access Privileges	 371
The SQL Data Control Language	371
Identifying Authorized Users	372
User identifiers	372
Getting familiar with Roles	372
Creating roles	373
Destroying roles	373

Classifying Users	373
Granting Privileges.....	374
Looking at data	375
Deleting data	375
Adding data	376
Changing data	376
Referencing data in another table.....	376
Using certain database facilities	378
Responding to an event.....	378
Defining new data types	378
Executing an SQL statement	378
Doing it all	379
Passing on the power.....	379
Revoking Privileges.....	380
Granting Roles	381
Revoking Roles	381

Chapter 4: Error Handling383

Identifying Error Conditions	383
Getting to Know SQLSTATE.....	384
Handling Conditions	386
Handler declarations	386
Handler actions and handler effects.....	387
Conditions that aren't handled.....	388
Dealing with Execution Exceptions: The WHENEVER Clause	388
Getting More Information: The Diagnostics Areas.....	389
The diagnostics header area.....	390
The diagnostics detail area.....	391
Examining a Constraint Violation Example.....	393
Adding Constraints to an Existing Table.....	394
Interpreting SQLSTATE Information.....	394
Handling Exceptions	395

Book V: SQL and Programming.....397

Chapter 1: Database Development Environments399

Microsoft Access	399
The Jet engine	400
DAO	400
ADO	400
ODBC.....	400
OLE DB.....	400
MDB.....	401
ACCDB.....	401

Microsoft SQL Server	401
IBM DB2	401
Oracle 10g	402
MySQL.....	402

Chapter 2: Interfacing SQL to a Procedural Language 403

Building an Application with SQL and a Procedural Language.....	403
Access and VBA.....	404
The ADODB library	404
The ADOX library	405
Other libraries	405
SQL Server and the .NET languages	405
MySQL and C++.NET or C#.....	406
MySQL and C.....	406
MySQL and Perl.....	406
MySQL and PHP.....	407
Oracle SQL and Java	407
DB2 and Java.....	407

Chapter 3: Using SQL in an Application Program 409

Comparison of SQL to Procedural Languages.....	409
Classic procedural languages	410
Object-oriented procedural languages	411
Non-procedural languages	411
Difficulties in Combining SQL with a Procedural Language	412
Challenges to using SQL with a classical procedural language....	412
Contrasting operating modes	412
Data type incompatibilities	413
Challenges to using SQL with an object-oriented procedural language.....	413
Embedding SQL in an Application	414
Embedding SQL in an Oracle Pro*C application	414
Declaring host variables	416
Converting data types	416
Embedding SQL in an Java application	417
Using SQL in a Perl application	417
Embedding SQL in a PHP application	417
Using SQL with a Visual Basic .NET application.....	418
Using SQL with other .NET languages	418
Using SQL Modules with an Application.....	418
Module declarations	419
Module procedures	420
Modules in Oracle	421

Chapter 4: Designing a Sample Application	423
The Client's Problem	423
Approaching the Problem	424
Interviewing the stakeholders	424
Drafting a detailed statement of requirements	425
Following up with a proposal	425
Determining the Deliverables	426
Finding out what's needed now and later	426
Planning for organization growth	427
Nailing down project scope	428
Building an Entity-Relationship Model	429
Determining what the entities are	429
Relating the entities to each other	429
Relationships	430
Maximum cardinality	430
Minimum cardinality	431
Business rules	431
Deep thinking	432
Transforming the Model	432
Eliminating any many-to-many relationships	433
Normalizing the E-R model	435
Creating Tables	437
Changing Table Structure	440
Removing Tables	440
Designing the User Interface	441
Chapter 5: Building a Sample Application	443
Designing from the Top Down	443
Determining what the application should include	444
Designing the user interface	444
Connecting the user interface to the database	445
Coding from the Bottom Up	447
Work to do before starting to build the application	447
Create the database	448
Fill database tables with sample data	449
Creating the application's building blocks	454
Developing screen forms	454
Developing reports	455
Gluing everything together	455
Testing, Testing, Testing	455
Fix the bugs	456
Turn naive users loose	456
Bring on the hackers	456
Fix the newly found bugs	456
Retest everything	457

Chapter 6: SQL's Procedural Capabilities	459
Embedding SQL Statements in Your Code	459
Introducing Compound Statements	460
Atomicity	461
Variables	462
Cursors	462
Conditions	462
Assignment	463
Following the Flow of Control Statements	463
IF . . . THEN . . . ELSE . . . END IF	464
CASE . . . END CASE	464
Simple CASE statement	464
Searched CASE statement	465
LOOP . . . ENDLOOP	466
LEAVE	466
WHILE . . . DO . . . END WHILE	467
REPEAT . . . UNTIL . . . END REPEAT	467
FOR . . . DO . . . END FOR	468
ITERATE	468
Using Stored Procedures	469
Working with Triggers	469
Trigger events	471
Trigger action time	471
Triggered actions	471
Triggered SQL statement	472
Stored Functions	472
Passing Out Privileges	473
Stored Modules	473
 Chapter 7: Connecting to a Remote Database	 475
Native Drivers	475
ODBC and Its Major Components	477
Application	478
Driver manager	479
Drivers	479
File-based drivers	480
DBMS-based drivers	480
Data sources	482
What Happens When the Application Makes a Request	482
Using handles to identify objects	482
The six stages of an ODBC operation	484
Stage 1: The application allocates environment and connection handles in the driver manager	484
Stage 2: The driver manager finds the appropriate driver ...	484
Stage 3: The driver manager loads the driver	484

Stage 4: The driver manager allocates environment and connection handles in the driver	485
Stage 5: The driver manager connects to the data source through the driver	485
Stage 6: The data source (finally) executes an SQL statement.....	485

***Book VI: SQL and XML*489**

Chapter 1: XML/SQL Basics491

Introducing XML.....	491
The Parts of an XML Document	492
XML declaration	493
Elements	493
Nested elements	494
The document element	494
Empty elements	494
Attributes	494
Entity references.....	495
Numeric character references	496
XML Schema	496
Relating SQL to XML	497
The XML Data Type.....	497
When to use the XML type	498
When not to use the XML type	499
Mapping SQL to XML	499
Mapping character sets to XML	499
Mapping identifiers to XML.....	500
Mapping data types to XML	500
Mapping non-predefined data types to XML	501
Domain	501
Distinct UDT	502
Row	503
Array.....	504
Multiset	505
Mapping tables to XML.....	505
Handling null values.....	506
Creating an XML schema for an SQL table.....	507
Operating on XML Data with SQL Functions	508
XMLELEMENT	508
XMLFOREST	509
XMLCONCAT	509
XMLAGG	510
XMLCOMMENT	510

XMLPARSE	511
XMLPI	511
XMLQUERY	511
XMLCAST	512
XML Predicates	512
DOCUMENT	512
CONTENT	513
XMLEXISTS	513
VALID	513

Chapter 2: Storing XML Data in SQL Tables 515

Inserting XML Data into an SQL Pseudo-Table	515
Creating a Table to Hold XML Data	517
Updating XML Documents	517
Discovering Oracle's Tools for Updating XML Data in a Table	518
APPENDCHILDXML	518
INSERTCHILDXML	519
INSERTXMLBEFORE	520
DELETXML	521
UPDATEXML	522
Introducing Microsoft's Tools for Updating XML Data in a Table	523
Updategram namespace and keywords	523
Specifying a mapping schema	525
Implicit mapping	525
Explicit mapping	526
Element-centric mapping	531
Attribute-centric mapping	531
Mixed element-centric and attribute-centric mapping	532
Schemas that allow null values	533

Chapter 3: Retrieving Data from XML Documents 535

XQuery	536
Where XQuery came from	536
What XQuery requires	536
XQuery functionality	537
Usage scenarios	538
FLWOR Expressions	542
The for clause	543
The let clause	544
The where clause	545
The order by clause	545
The return clause	546
Comparing XQuery to SQL	547
XQuery's FLWOR expression and SQL's SELECT expression	547
Relating XQuery data types to SQL data types	547

Book VII: Database Tuning Overview551

Chapter 1: Tuning the Database553

Analyzing the Workload	554
Considering the Physical Design.....	555
Choosing the Right Indexes	556
Avoiding unnecessary indexes	556
Choosing a column to index	557
Multi-column indexes.....	557
Clustering indexes.....	557
Choosing index type	559
Weighing the cost of index maintenance.....	559
Composite indexes.....	559
Tuning Indexes	560
Tuning Queries	561
